This item is filmed at the reduction ratio checked bolow/
Ce document est filmé au taux de réduction indiqué ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:
D.B. Weldon Library

University of Western Ontario

The images appearing hare are the best quality possible consldering the condition and legibility of the original copy and in keeping with the filming contract apecifications.

Original copias in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are fifmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol $\rightarrow$ Imeaning "CONTINUED"), of the symbal $\nabla$ (meaning "END'). whichever applies.

Meps, pletes, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the mathod:

L'oxemplaire filmó fut reproduit grâce al la générosité de:
D.B. Weldon Library

University of Western Ontario

Les images suivantes ont été reproduites avec le plus grand soin. compte tenu de la condition ot de la netteté de l'exemplaire filmé, at en conformith avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmós en commençant par le premier plat ot en terminant soit par la dernidre page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la premidre page qui comporte une emprainte d'impression ou d'illustration et en terminant par la dernidre page qui comporte une telle emprointe.

Un des symboles suivants apparaitra sur la dernidre image de chaque microfiche, selon le cas: le symbole $\rightarrow$ signifie "A SUIVRE", le symbole $\nabla$ signifie "FIN".

Les cartes, plenches, tableaux, otc., peuvent átre filmés des daux de réduction différents. Lorsque le document est trop grand pour âtre reproduit en un seul cliché, il est filmé à partir de l'angle supf́rieur gauche, de gauche à droite. et de haut on bas, on prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

;ly numbered the pages.

## PRETACE.

In preparing this edition of the well-known "Chase's Recipes," we have endeavored to make the book more valuable than it was before. The many useful recipes for use in the household and on the farm, at the bed-side and in the kitchen, for the student, the meohanic, the merchant, the professional man and everybciay else, have been supplemented by additional information on many important mattors. Nut the least of these is the chapter on emer. genelos, designed to assist every one in providing prompt remedial measures for the more serions accidents and sudden attacks of disease to which all are subject, and in which delay is not only dangerous, but frequently fatal. It is confidently expected that this book in its improved shape will serve a useful purpose, and render incalculable service to all in whose possession it may come. Toronto, August 18t, 1882.

VINEGAR. - Merchants and Grocers who retail vinegar should always have it made under their own eye, if possible, from the faot that so many unprinoipled men enter into its manufacture, as it affords such a large profit. And I wruld. further remark, that there is hardly any article of domestic use, upon which the mass of the people have as little correct information, as upon the subject of making vinegar. I shai be brief in my remarks upun the different points of the subject, yet I shall give all the knowledge neeessary, that families, or those wishing to manufacture, may be able to have the best article and at moderate figures. Remember this faet-that rinegar must have air as well as warmeth, and especially is this neoussary if you desire to make it in a short space of time. And if at any time it seems to be "Dying," as is usually valled, add molasses, sugar, aloohol, or cider-whichever article you are making from, or prafer -for vinegar is an industrious fellow; he will either work or die; and when he begins to die you may know he has worked up all the material in his shop, and wants more. Remember this in all vinegars, and they will never die, if they have air. First, then, upon a small scale, for fanajly use.

To Mare ns Threre' Werrs.-Molasses 1 qto ; yeast 1 pt. ; warm rain water 3 gals. Put all into a jug or beg and the a piece of gauze over the bung to keep out flieg and let in einis In 2t Weatuer set it in the sun, in cold weather set it by the stuve - In the chimney corner, and in three weeks you will have good vinegar.
Whuil wis is getting low pour out some for use, and fill
up the jug, in the same propertion as at first, and you will hover have trouble for want of good vinegar.
2. A oorrespondent of the Dollar Nowopaper nayn: "The oheapest mode of maklag good vinegar is, to mlx of quay of warm In a few weeker 2 qus. of Orleans molanees, and $\&$ quan of woums HIO might well yau "lll have the bent vinegar you ever thated." Fould have doublo the neent vinegar you ever tasted," for $A$ Umen the strength of muoh necessary strength, and three or ffar cost lees to mako, than to buy by the quart. 3. In Barrele Without Trouble.-Merohants and Grooers, who retail vinegar, oan always keep a good supply on hand by having about two or three barrele out of whioh empty, with of the first one thoy sell ocin before quite

## ga

Keeping this proportion to fill the burrel ; the vinegar and mother whioh is loft in the barrel makes it work muoh quicker than if put into empty larrels; so pass around on unloss you soll more thearly out, having three barrels, and be out of vinegar. Some recommend to, you need nover of tartar, \&o., in vinegar, hut $I$ snd to use alum, oream ad risable to have a hole in the top ofy nevor. It is alvays on end; if on tho sido, tho bung of the barrel, if standing to keep out flies and let air in.
4. Fron Sugar, Drippings from Sugar Hogsieads, Ni-Dealers who retail molasses, ofton have from five to fifty pounds of sugar left in the barrel after selling oa than molasses. Each pound of this, or other sugar, dissolverd in two gallons of soft water, makes that amount of gooc : gar by either of the above plans. Rinsings of molasses barrels or drippings of sugar hogsheads brought to this debreo of sweetness, is as good for vinegar as any other matorial. Sinali beer, lager beer, alo, \&o., which have become beer make good vinegar by roducing with water; small wator ans antlitle water; lager beer will need ns much water 1 a a wis will emore; and ale, twioe as muoh

## 

gar in them, and it will do no harm, but quieken the procens in all canes if there is vinegar in the barrel.
 molassen 1 gri. ; pmt them Into a 40 gallon cask, and fill It up with rain water; shake it up and let stand from one to three weeke, and the result iog good vinegar.

If this does not make it ar sharp as you like, add a little moro molasses. But some will object to this because an noid is used; lot mo say to suoh, that acetio acid is concentrated vinegar. Take 1 lb . or 1 pt . or any other quantity of this acid, and add seven times as much soft water, and and that instantaneously.
6. Friom Apple Oider."-As there are those who will not have any but cider vinegar, and have plenty of cider out of which to make it, I will give you the best plan of prooceding for manufacturers:
Have a room where it will not freeze; place on end as many barrels or large casks, without heads, to hold as much as you wish thirds with apple one-third full of soft water, and the other two-

In
yeast it wecks you will have good vinegar; without the fill up into barrels for sale season in becoming good. Then in the open barrels, and fill leaving a little, say one-eighth, as before, and it will become them up.with water and cidor fore. If the water is but pure cider makes objected to, use the cider without it, ard requires mueh longegar too strong for any one to use, ir ${ }^{2}$ L Lave buards over ther time in making. These barrels the retailer can give it his to keep out flies and dirt. If good oider vinegar to sell attention, by having a barrel of if, when he draws out two out of, he can always keep it up, he will go to his cider, kept or three gallons of the vinegar, the vinegar with the oider; water or any other article, fill if making with molasses and notice, if you forget or $n$ up with the same; but take nearly ail out heffre yor negleet, and draw your vinegar of sharpness desired, unless $i \overline{\text { in }}$, $i t$ dioes not ireep to the point as mentioned in recipe No. 3.

Persons who have old sour cider on hand can in this way ${ }^{2}$ ? or as mentioned in No. 6, have good vinegar from it immediately, as it comes around into vinegar muolı quisker than new cider.
7. In Three Days without Druge.-The philosophy or making vinegar quickly is this: The means that will expose the largest surface of the vinegar fluid, of a certain temperature, to the air, will convert it into vinegar in the shortest time; and as there is no way by whioh so great a surface can be exposed as by the shaving process, and at the same time control the temperature, that plan has been adopted, as explained in the following descriptive note:

Descriptive Noxs--Those wishing to manufacture, to sell at Wholesale, will prepare a tub or square box, the taller and larger the tub, the quicker will the vinegar become good. The air holes are bored through every other, or every third stave, around the Thole tub:" These holes are to be 'about one foot or eighteen inches from the bottom; they must also be bored slanting down waste as it dringard; otherwise the vinegar would run out and to. be from ten to twenty elle of tie tuib. These tubs ought you desire to run off daily feet high, according to the quantity you desire to rus off daily. Now take beech; maplo or bas

## 

wood boards, and they are valuable in the order namud, cut them off about elghteen inches in length, and plane thick. heary shavings from the edges; and if they do not roll up and stay in nice rolls, you must roll and tie them up with small cord. or clean corn cobs will do, but they will only last one seasou, whilst the shavings will last several years. If cobs are used, they must be rut in layers, each layer crossing the other, to prevent their packing too close. Then wet or soak them thorouglly in water, and fili up the tub or tubs with them, until you are within two or three feet of the top, at which place you will nall a stout hoop around, upon the inside of the tub, which shall support the false top, which has been made and fitted for that purpose, through which false top you will have bored gcod sized gimlet holes about every two inches all over its whole surface, through each of which holes a small cord, about four or five inches in length, is to be drawn, having a knot tied upon its upper end to keep it in its place, and to prevent the vinegarfluid from working out too fast. The size of these holes, and the size of the cord, must be such as to allow the amount of vinegar being made to run through every twelve hours, or if time can be given to put it up so often, it may run through every six hours. You will cork all around between the false top and the tub with cotton, which causes the vinegar-fluid, hereafter to be desorlbed, to pass through the gimlet holes and drip from the ends of the small cords, evenly, all over the shavings, otherwise, if the false top was not exactly level, the vinegar-fuld would all run off at the lowest point, down the side of the tub, and be a very long time in becoming good, whilst if it drips slowly and all over and down through the shavings, it sooncomes aronnd into good vinegar.' The holes bored for that purpose, in warm weather, oxidizes or acetifies the vinegar-fuld, by atfording the two essential points of quickly making good vinegar, Lnat is, air and heat, without the expense of a fire to warm the fluid, or room in which the vinegar is made. Now bore ave one-inch boles through the false top, one of them through the centre, "and the others two-thirds of the distance each way, towards the outside of the tub. into which holes drive as many pins, having a three-quarter, wuch hole bored throngh theil lengthwise, which makes them tubes; cut the tubes off an inch below the top of the tub, so as to be out of the way of the malis cover or loose boards which will be thrown over the top of the tub for the purpose of keeping out flies and dirt, and also to keep the heated air in, which comes up through the tubes; thls air becomes heated' by the chemical action of the air upon the vinegar-fluid as it drips along down through the shavings in the hand thecoming so hot that it would be uncomfortable to hold the hand therain. The space Eviween ife false top and the cover - epace, and it must bo sufficlently tight

## 88

## Dh. OHASE'S REOIPES.

the tuh, and let it drip through the gimlet holes, from the cords, over the shavings, two or three times, each time putting in one gallon of highwines, or two or three gallons of clder, as the case may be, which sours the shavings and greatly helps the starting procength of the vinegar-making. Without the addition to the nearly all of its vinegar as it runs through, it would part with thus lose its own life. If stren or acidity, to the shavings, and egar, to start with, you mou hive not, nor cannot obtain, vinkeep adding to it every time begin with weak vinegar-fluid, and then you will consider yourself rough until it becomes very sour; double quick time, by using andy to begin to make vinegar in foregoing vinegar recipes. highwines thirty to forty per But manufacturers generally use eleven gallons; but persons cent above proof, one gallon; water, will find a cheaper plan by using a great distance from market one galion ; water, fifteen gallong ninety-eight per cent alcohol, vinegar, using yeast, of course, with ither of whlch make good pint to one quart to each course, with either article, from one vat must be set in the ground, under thg made. Another tub or as the case may be, to hold as much generator, or in a cellar, tween the false and real top mill vinegar as the space bewish to make at one time; from contain, or as much as you buckets, (or a wooden pump from which it is to be carried up in and easier to raise it), to the having a leather sucker is quicker comes good vinegar, which it will of the generator, until it bethe head of this recipe, if passed tho in the tlme mentioned at faucet every twelve hours, which it must be the generator by the fifteen or twenty feet high, it will or, must be ; and if the tubes are or twice at most.

Some will have no vinegar buc chat made from apple cider; then put in one-third water, and it makes vinegar as strong as anybody ought to use; but if they will have it at full strength, make it so, only it requires a little longer time

If those who have cider which has been standing a long cime, and does not become vinegar, will reduce it one-third with water, and pass it through this machine, they will grind out first-rate vinegar in one or two days' time. Sour beer or ale, the artificial cider, also, if it gets sour, make good vinegar when mized with some other vinegar in making. Sirall beer, also drippings from sugar iogsheads in place of molasses, \&c. Nothing having sugar or alcohol in it should be thrown away, as all will make good vinegar, which is as good as oash, and ought to be saved-if for no other purpose than to have the more to give the worthy poor. the vinegar-fluid of about seventy-five degrees of heat, and also to keep the room of tho same temperature; but it. has been found that by keeping the heat in the tub by the false top and the loose cover, that in warm weather it docs very well without heating up the fluid, although it would make a little quicker with it ; and if desired to make in cold weather, you must heat the fluid and keep the room warm also.

If fumilics choose to try this plan, they ean make all they will need in a keg not larger than a common churn, whilst wholesalers will use tubs as tall as their rooms will admit.

The first merchant to whom I sold this recipe, made all the vinegar he could retail by placing strips of board across the contre of a whisky barrel, which supported the shavings in the upper half only, allowing the vinegar to stand in the lower half, as his room was so low he could only use the one barrel and a wash-tub at the top instead of the false top and space as previously represented; it took him only a week to make in this way. I used the vinegar over a year. The strength of the fluid he used was good common whisky, one gal.; water four gals. So it will be seen that all into vinegar.
Remark.-If you wish to make sugar into vinegar, do not attemp to run it tbrough the generator, as it forms mother in that way. and soon fills up the little holes; but make it by standing in a barrel, as mentioned under that head, No. 4.
8. Quici Process ay Standing upon Shatings.-Take four or five hogsheads or casks, and set them side by side, having a faucet near the bottom; then fill up the casks full of shavings, prepared as in the foregoing recipe, or clean corn-cobs, putting some turning shavings over the top, after having put on an old coffee sack to keep the fine shavings from falling down among the coarse ones; ihis is to keep in the warmth; now sour the shavings with the best vinegar, by throwing it on the shavings cet at the bottom half a day or so; then draw off by the fauwines to each barra and throw it on agaln, adding 1 qt. of highabsorb the acid, end teach time you draw it off, as the ehaving the spirit the shavinge become vinegar gets better also. When $\begin{gathered}\text { oured or acetifled, and the }\end{gathered}$ highwines 30 or 40 per cent. above preot shavings are right, take noit water 14 gala, per criver or woll proof 1 gal. ; molasees 1 qt.
for any vinegar), and put it upon the shavings, and draw off and put on again from cne to three times daily, until sufficiently sour to barrel up.

- Mr. Jackson, a grocer, of Jackson, Michigan, has been making in this way for several years. He uses also, sour ale, rinsings of sugar hogsheads, or the drippings, and throws this fluid on the shavings, and draws off and returns from one to three times each day until sufficiently sour to barrel up, which only requires a few drawings; he then fills his barrels only two-thirds full, and leaves the bungs out summer and winter, and if he finds a barrel is getting weak in strength, he puts in a quart of highwines, which recruits the strength, or gives it work again, which, as I remarked before, if you give him stock to work on, and air, he labors -without both, he dies. Bcar this in mind, and your vinegar will improve all the time, no matter how or of what it is made. He fills the tubs only one-third or one-half full When making, does not heat, but uses yeast, and oniy works them in warm weather, and in winter fills the tubs with

be ca Aflientily bour
in, has been es also, sour ppings, and and returns ntly sour to he then fills bungs out retting weak ich recruits I remarked ir, he labors ad your vinr of what it ne-half full only works $\theta$ tubs with pring, when
$s$ oold over
juvic, to say n either of fluid quite gun with at dd more of oiu get the on until a ad remove ird, pack in und you will g. A short cover the of the butabout an
inch or two of brine in place of the lard, and havo it do well, first working out all the buttermilk which may remain, when bought in. It would be well for them to have their regalar customers to furnish them butter, to whom they furnish the right kind of salt, as the rock, or erystal salt, does not contain so much lime as the common, whish is evaporated by artificial heat. Let sugar, and saltpotre, and all other petres, alone, if you wish good buttor, eithor for present use or long keeping.
2. Mikna--Directions For Dairyman.--If butter makers or dairymen will use only shallow pans for their millk-and the larger the surface, and the less the depth of the milk the better-then put into cach pan, before straining, 1 qt. of cold spring water to every 3 qts. of milk, they will find the cream Will begin to rise immediately, and skim every 12 honrs, the butter will be free from all etrong taste arlislig from leaves, or

It is a fact, also, that high or upland makes better butter than "when the cows are kept on rioh bottom pasturage. The object of the cold water is double: it cools the milk, so that the eream rises before the milk sours, (for when milk becomes sour it furnishes no more cream,) and also improves' the flavor.
3. Storing-The (Iucivots) Prataie Farman's Method:- Firsis work the buttermilk carefully from the butter; then pack it olosely in jars, laying a thin cloth on top of tho butter, then a thin layer of salt upon the cloth ; jow have a dry oollar, or make it so by draining; and dig a bole in the bettom of if for ench jar, paoking the dirt closely and tightly arcund tho jar, allowing the cops of the jars to stand only an inoh or so aibove the top of the cellar bottom ; now place a board with a weight upon each jar to : prevent removing by acoldent, and all is safo.

Merehants who are buying in butter, should keep each different lot separate, by using the thin oloth anc. Nalt; then another cloth over the salt be..ore putting in the nezt lot; for mixed butter will soon spoil, besides not selling as well, and finally oover the top as hefore deseribed. If kegs or barrels are used, the outside must be as well painted as possiblo, to prevent outside tastes, and alsp to preserve tho wood,

FEUITS TO KEEP.-WITHofr Loss of Colon on FluvothTo each pound of rosin, put in 1 oz of tallow, and 1 oz , of. beaswax. Melt them slowly over the fire in an iron kattle, and be careful and not lat it boil. Take the Aruit separately and rab

It over with whiting or fine ohalk (to provent the coating from adhering to the fruit,) then dip it into the solution once and hold it up a moment to set the coating; then pack away carefully in barrels or bozes in a cool. place. When you dip oranges or lemons, loop a thread around to hold them ; for pears or apples, insert a pointed stick to hold them by, then cut it off with a pair of sharp, heary shears. Oranges or lemons cannot be put in boxes, but must be placed on shelves, as the accumulated weight wonld
mash them down.
It is now a well established fact that artioles put up sciontifically air-tight, may be kept fresh and fair for any length of time, or until wanted for use. This composition makes good sealing for air-tight cans or bottles, pouring it around the top of the can cover, and dipping tho neok of the bottle into it. 1 A patent has been secured for a composition for preserving fruit, of different proportions, however, from the foregoing, but the agent, at the Ohio State F'air, in 1859, had such poor success in selling rights at three dollars, that he reduced the price to twenty-five centa, and still but few would take hold of it, so that I think not much more will be done with the patent. I purchased twenty recipes for ono dollar, but finding this composition to stick together, and tear off pieces whercver they tonohed each other, I went to work to improve it as above. Tho patented proportions are, rosin 5 lbs., lard or tallow 8 oz., beeswax 4 oz . The patentee is John K. Jenkins, of Wyoming, Pa., and the patent was issued December 8, 1858. It does not work well on peaches or other juicy garden fruits.
EGGS.-To Prbserve for Winter Usi.-For every three gallonis of water, put in 1 pint of fresh slacked lime and common salt $\frac{7}{2}$ pint; mix well, and let the barrel be about half full of this fluid, ther 1.2 a dish let down your fresh eggs into it , tipping the dish after ic illls with water, so they roll out without crack? ligg the shell, for if the shell is cracked the egg will spoil.

If fresi eggs are put ia, fresh eggs will come out, as I have seen men who have kept them two, and even four, years, at sea. A piece of board may be laid across the top of the eggs, and a little lime and salt kept rpon it, which keeps the fluid as strong at the top as at the bottom. This will not fail you. They must always be kept covered with the krine. Tamilies a towns and cities by this plan can have eggs for winter use at summer prices. I have put up. forty dozen with entire success.
coating from nce and hold carefully in anges or lemor apples, inwith a pair of put in boxes, veight would

three gald common thalf full into it, tiphout crack
out, as I ven four, s the top it, whioh
m. This ered with
plan can pe put up.

2he plan of preserving egge has undoubtedly come from - patent mecured by a gentleman in England in 1791, Jaynes, of Sheffield, Yorkshire, whioh reads as follows:
2. Encuran Patented Method-" Put into a tub 1 bu. Widohester measure, of quick lime, (which is fresh slacked lime,) salt 32 oz. ; oream of tartar 8 oz . Use as much water as will give that eonsistency to the composition as will cause an egg to swim with its top just above the liquid. Then put and keep the egga therein, which will preserve them perfectly sound at least 2 jears."

Pezsons who think it more safe oan follow this English plan. I desire in all eases to give all the information I have on each subject. Consequently I give you the following also:
3. J. W. Cooper, M. D.'s, Method .m Kerpina and Ship ping Gake Eaos.-"Dissolve some gum shellac in a sufficient queatity of aloohol to make a thin varnish, give each egg a coat, and after they become thoroughly dry, pack them in bran or saw dust, with their points downwards, in such a manner thot they cannot ahift about. After you have kept them as long as you desire, wash the varnish carefully off, and they will be in the samo state as they were before paoking, ready for eating or hatching."

This would neem to be from good authority, as Dr. Coepor has been engaged for the last thirty years in raising nothing but the best game fowls, and he has frequently imported egge. He invariably directed them to be packed as above, and always had good success with them, notwithetameding the time and distance of the journey. He has also published a work upon Game Fowls. His address is Medin, Delaware Co., Pa.

Thin last plan would be a little more troublesome, but still would not be very much to prepare all that families would wisk to use through the winter, or even for the retailor ; as the con renience of having them in a condition to ship would be one inducement to use the last method, for with the first they must be taken out and packed in oats' or something of that sort, to ship; with the last they are always ready; and weather permitting, about Christmaes or New Year's, fresh and good eggs in cities always command nufficient price to pay for all trouble and expense in the preservation and shipmont.

## DR. CHASE'S REOIPES.

Tre Sex of Egas.-Mr. Genin lately addressed the Academy des Sciences, France, on the sabjeet of the sex of eggs. He affirms that ho isfnow able, after having studied the subject for upwards of three jears, to state with assurance that the eggs containing the germ of males havo wrinkles on their smaller ends, while female eggs are smooth ot the extremities.

While on the subject of eggr you will exeuse me for putting in a couple of items more, which appropriately belong to other departments :
4. To Inorease the Layina.-"For several years past the Kennebee river, in Maine. The lady with whom I have stopped is a highly accomplished and intelligent housewife. Shation in the a 'hennery', and from her I derived iny years she had been in the She told me that for many hens, with their common food,-
"Cayenne pepper, pulverized, at the rate of one teaspoon each brought in from twelve to fourteen eggs, having but sixteon hens in all. She again and again experimented in the matter by omitting to feed with the Cayenne for two or three days. The consequence invariably was, that the product of eggs fell off five or six per day. The same effect of using the Cayenne is produced in winter as in summer."-Boston
Transcript.
6. To Fry ; Extra Nioe.-Three eggs ; flour 1 tablespoon ; milk
oup.

Beat the eggs and flour together, then stir in the milk. Have a skillet with a proper amount of butter in it, made hot, for frying this mixture; then pour it in, and when one yide is done brown, turn it over, cooking rather slowly; if a larger quantity is needed, it will require a little salt stirred in, but for this amount the salt in the butter in which you fry it, seasons it very nicely.
BURNDNG FLUTD-BÉsT in Use.-Alcohol, of 98 per cent.; 9 pts. ; good camphene, 1 qt.; or in these proportions. Shate

briskly, and it wlll at once become clear, when without the shaking it would take from 6 to 7 qts. of alcohol to cut the camphene, while with the least it is the best.
These proportions make the best burning fluid which oan be combined. Many put in oamphor gum, alum, \&o., the first to improve its burning qualities, the last to prevent explosion, but they aro perfectly useless for cither, from the fact that camphor adds to the smoking properties, and nothing can prevent the gas arising from any fluid that will burn, from explosion, if the fire gots to it when it is conined. The only safety is in filling lamps in day-time, or far from fire or lights; and also to have lamps which are perfect in their construction, so that no gas may leak out along the tube, or at the top of the lamp; then let who will say he can sell you a recipe for non-explosive gas or fluid, you may'sct him down at once for a humbug, ignoramus, or knave. You may set fire to this fluid, and if not confined it will not explodo, but will continue to burn until all is consumed. Families eannot make fluid any cheaper than to buy it, as the profit charged on the aloohol is usually more than charged on fluid; but they will have a bettor article by this recipe than they can buy, unless it is made from the same, and it is best for any one, evon the retailor, only to make small quantities at a-time, and get the freshest camphene possible. When made in large quantities, even a barrel, unless sold out very soon, the last part is, not as good as the first, owing to the separation of the camphene from the alcohol, unless frequently shaken, whilst being retailed out.
interest.-Computing by one Mulitplication and Ont Division, at any Rate Per Cent.-Multiply the amount by the number of days, (counting 30 days to each month.)

Divided by 60 gives the interest at 6 per cent.
do

Exaumpte- $\$ 150$ at 3 months and 10 days, or " 100 days, is 16000 divided by 60 , gives $\$ 250$, which is the interest at 6 per cent ; or divided hy 45 , gives $\$ 333$ interest at 8 per cent., \&o.
I sold a gentleman, a miller, one of my books the second time, as some person stole the first before he became familiar with the foregoing rules, which ho admired too much to lose.

## 4

## Dr. ohabe's reotpis.

2. Method ex $\perp$ Sinole Molitplication.-Rule to ind the interest on any given sum of money for any number of years, months or days. Reduce the year's to months, add in the monthe, If any, take one-third of the days and set to the right of the months, in the decimal form, muitiply this resuit by ono-hwlf the principal, and you have the interest required.
Example.- - 'ho interest required on $\$ 1,400$ for 2 yearm, 3 monthe Interest on $\$ 4,400$ for 2 years, 3 months and 9 daya.

Merominnis' AND GROCERS' DEPABTICENTS.
Foorre.-The shading in the back ground of the rignette, or over or around the letters forming the name of the bank, on a good bill is even and perfect, on, a connterfeit is irregular and imperfeet.

Fiftil.-Ezamine well the figures on the other parts of the note, containing the denomination, also tho letters. Examine well the die work around the figures whioh stand for the denomination, to sce if it is of the same character as that which forms the ornamental work surrounding it.
Sixsur, -Never take a bill that is doficient in any of the above points, and if your impression is bad when you first see it, yon had better be careful how you become convinced ti change your mind-whether your opinion is not altered as you becomo confused in looking into the texture of the workmanship of tho bill.

Sevienti.- Examizia tho name of the State, name of the bank, and name of the town where it is located. If it has been aliered from a broken bank, the defects can plainly be seen, as the alteration will show that it has been stamped on..
inks-Bragr Copyive, or Writing Fludd.-Rain water 2 gale; gum arablo +lb .; brown sugar $\ddagger \mathrm{lb}$. clean copperas $\ddagger \mathrm{lb}$. jpowdered nutgalls $\frac{3}{} \mathrm{lb}$; bruise all, and mix, shaking occasionally for 10 days, and strain; ;if needod sooner, let it steep in an iron kettle
:antil the strength is oitalned.

This ink can be depended upon for deeds or records which you may wish some one to read hundreds of years to come. Oxalic acid one fourth oz. Was formerly put in, but since the use of steel pens -it does not work well on them. If not used as a copying ink, one-fourth the gum or sugar is sufficient as it flows more free without them.
2. Common Blacs.-Logwood chips 1 lb ; boil in $1 \neq$ gals. of water until reduced to 2 qts ; pour off, and repeat the boiling again as before; mix the two waters, 1 gals in all; then add bi-
 iron (Prussian blue) $\frac{1}{2}$ oz.; boil again about five minutes, and atrain and bottle for use.

You will find none of the gumminess about this inl that is found in that made from the extract of logwood; yet it is not presumed that this will be as durable as the gall inks, for deeds, records, \&o., \&o., but for schools and common woic

## DR. OHLSE'S REOLPES.

## it is as good as tho most costly inks. This oopy was pre-

 pared with it, whioh was made two years ago.3. Red-Tbe Very Brest.-Tako an ounce vial and put into it a 6 grs. No. 40 aqua ammonia, gum arabio the size of two peas, and with soft water, and it is soon ready for use. carmine alec; fill up This forms a beautiful ruling ink. I sold the book in the Pike County Bank, Ill, from tho iact that this ink was so much better than what they could get of any other make. Speaking of banks makes mo think of what a gentleman of purposes, whioh would never fado a blaok ink for banking only:

Iron or atel ain
for a good length of time; palo when. water, exposing it to the sun coming very black.
I have nevor thought to try it, but now mention it for fear it might bo good, and lost to the world; unless now thrown to tho pablio.
4. Blue.-Take sulphate of indigo and put it into water until you get the desired depth of color; that sold in little boxes for
bluing clothes is the ortic

This does well for scheol ded. importanoe to keep; but for children, or any writing not of as the heat of a safe in a for book-keeping it is not good, color.
5. Inder (or about a terportrate of silver 11 grs ; dissolve it in 30 grs . spoons) of rain water, dissater of ammonia ; in 85 grs . (or 21 teagum is dissolved put Into the samgrs. of gum arabic. When the of soda (sal soda). When all is same vial also 22 grs , of carbonate or their contents, and place the wiel dissolved, mix both vials, Dasin of water, and boil for seve vial containing the mixture in $\varepsilon$, pound is the result, When cold in ts eres, or antil a black com finen or other goods starched and ironed ready for use. Have the write with a quill pen,

If twice the amount is made at a time it will not cost any more, as the expense is only from the trouble of weighing, so little is used of the materials. Soft soap and boiling oannot efface it, nor years of wear. Use only glass vessels.
6. Powder.-Black.-Sulphate of copper 1 dr. ; sum arabio oz copperas 1 oz, ; \#utgails and extract of logwood 40 ozs each; aif to be pulverized and evenly mixed.-Soientific American.

## comborantig and arooend departmenty.

in 30 grs. or 21 teaWhen the carbonate oth vials, ture in 2 ack com Have the ry ; then

About one oz. of the mixture will be required to each pint of boiling water used. It will be found a valuable color for bnot, shoe and harness-edge also. It should stand a couple of weeks before using, or it may be stecped a fow hours if needed sooner.

HONEYS-Artificul Cobl Honey.-Good brown sugar 10 lba, ; water 1 qt. ; old bee bread honey in the comb 2 lbs . ; creann of tartar 1 tearfpoon; gum arablo 1 oz ; oil of peppermint 3 drops ; oll of rose 2 drops. Mix and boll two or three mlavtes, and have ready 1 quart more of water, in whlch an egg is put, woli beat np ; pour it in , and as it beging to boil, skim well, rennove from the fre, and when a sittle cool, add 2 lbs , of nlee beet' Luaty, and strain.

This is really a nice article, looking and tasting like -honey. It has been shipped in large quantities under the name of "Cuba Honey." It will keep any length of tim6 as nice and fresh as when first made, if scaled up. Some persons use a table-spoon of slippery elm bark in this amount, but it will ferment in warm weather, and rise to the top, requiring to be skimmed off. If it is to be used only foreating purposes, the cream of tartar and gum arabio may be left out, also the old bee-bread honey, substituting for it another pound of nice honey.
2. Domestro Honey.-Coffee sugar 10 lbs ; water 3 lbs ; cream of tartar 2 ozs.; strong vinegar 2 table-spoons ; the white of 1 egg well beaten ; bees' honey $\$ \mathrm{lb}$. Lubin's extract of honey-suckle 10 drops.

First put the sugar and water into a suitable kettle and place upon the fire; and when luke warm stir in the cream of tartar, and vinegar; then continuo to add the egg; and when the sugar is nearly melted put in the honey and stir until it comes to a boil, take it off, let it stand a few minutes, then strain, adding the extract of honeysuekle last; lot stand over night, and it is ready for ase. This reaembles candied honey, and is a nice thing.
3. Excellent Honey.-An article suitable for evaryday ase is made as follows:
Good common sugar 5 lbs. ; water 1 qt. ; gradually bring it to a boil, skimining well; when cool, ada 1 ib . bees's honey, and 4 drops of peppermint essence.
If you desire a better article, use white sugar, and onehalf pint less water, and one-half pound more honey. If it
is desired to sive it the ropy appearance of bees' honey, put into the matex one-fourth ounce of alum.
4. Prewitr Honex.-Common sugar 4 lbs. ; water 1 pt. ; let them come to a boll, and skim; then add pulverized alum toz. ; remove frush the fire and stir in cream of tartar $\frac{1}{2} \mathrm{oz}$; ; $n \mathrm{~m}$ water orestracl of rose 1 tabie-spoon, and it is fit for use.
This took the prenium at an Ohio State Fair. We use ther recipes for common sugar and the one using Labin's sithact of honeysuakle, and desire nothing better.
JELLIES-Wmioov Frour--Take water 1.pt., and add to it of white crushed or coffee sugar 8 minute or two ; then add 4 lbs. while hot ; and when cold put in hate the boiling a little, strain extract of vanilla, strawberiy, or lemon, a two shilling bottle of desire for jelly. :

This will make a jelly so much resembling that made from the juice of the fruit that any one will be astonished; and when fruit cannot be got, it will take its place admirably. I have had neighbors eat of it and be perfectly astonished at its beauty and palatableness.
BAKING POWDERS-WITEGUT D̆RUNS-Baking soda 6 ozs.; cream of tartar 8 ozs. ; first dry them from all dampnoss by patting. them on a paper and placing them in the oven for a short time, then mix and keep dry, in bottles or boxes.
The proper amount of this will be about one tea-spoon to each quart of flour being baked. Mix with cold water, and bake immediately. This contains none of the drugs generally nsed for baking powders; it is easy made, and does not cost over half as much as to buy them already made. This makes biscuit very niee withont milk or shortening. The main obiect of boling would be that much richer. "Keepinc bac'," from civilized cons it is called, or for those who are far kind of bread or biscuit to thet raiser who prefer this milk and saleratus. I stand amt raised with yeast or sour MOUTH GLUE.-FFon Torn Paper, Notes, \&o.-Anry quantity of glue may be used, with sugar, only half, as acuoh an of the glue.

Ninst uissoive the glue in water, and earefully nw worate
qua) the into yous cord as much of the water as you can without burning tho whe;
then add the sugar; if desired to have a very nico artiolo, use gelatine in place of the glue, and treat it in the samo manner; when the sugar is dissolved in the glue pour it into moulds or a pan and cut it into squares, for convenience, bofore it gets too hard. This dissolves very quickly by placing the edge of a piecs in the mouth, and is not unpleasant to the taste, and is very handy for office or house use. Use to stiok together torn bills, paper, \&c., by softening the edgo of a piece as above, then touching the parts therewith and pressing together for a moment only.

## SALOON DEPARTMENTT.

Remares.-If saloon keepers and grocers who deal in wine, beer, cider, \&c., will follow our directions here, and make some of the following articles, they and their customers will be better pleased than by purchasing the spurious articles of the day; and families will find them equally applicable to their own use. And although we start with an artificial cider, yet it is as healthy, and is more properly a small beer, which it should be oalled, but from its closo rosemblance to oider in taste it has been so named.
CIDERS.-Artifichal, or Cider without Apples.-To cold water 1 gal . put dark brown sugar 1 lb . ; tartaric aciù foz. yeast 3. table-spoons, and keep these proportions for any amount desired to make ; shake it well together. Make it in the evening and it will be fit for use the next day.
I make in a keg a few gallons at a time, leaving a few quarts to make into next timo-not using yeast again until the kegs need rinsing. If it gets sour make a littlo more into it. In lot weather draw in a pitcher with ioe; or if your sales are slow, bottle it and keep in a cool cellar according to the next recipe.
2. To Botrle.-If it is desired to bottle this artifioial eider by manufacturers of small drinks, you will proceod an followi tario acid $\mathrm{ll}^{\mathrm{lb}}$. ; cold water 25 gals.; hop or brewers' yeast 3 pts. ; work the yeast into a paste with flour alb. ; mhate or attr

## DR. OLLASE'S REOLPES.

all well together; fill the barrel full, and let it work 24 to 48 hours, or uutil the yeast is done working out at the bung, by barrel full. in a little sweetened water occasionally to keep the
When it has worked clear, bottle it, patting in two or - three broken raisins to each bottle, and it will nearly equal champagne. Let the bottles lay in a cool place on the side - (observe also this plan of laying the bottles upon the side, in putting away applo-ider or wine)-but if it is only for your own retail trade you can make as follows in the next recipe, and have it keep until a barrel is retailed. The first recipe will last only three or four days in hot weather, and about two weeks in winter. I days in hot weather, and
3. In Barrels for Long Keeping.-If retailers wish to keep this oider with the least possible loss of time, or as follows:

Place in a keg or barrel, oold water 20 gals. ; brown sugar $15 \mathrm{lbb} . ;$ and tartario acid llb. only, not using any yeast, but if you have in the expressed juice ; withour souples, or boil them and pour cellar, for several weeks, even in yeast it. will keep in a cool the more natural will be the color of the cider. The darker the sugar
Dr. O. B. Reed, of Bell River, Mich., with whom 1 read medicine, drank of this cider freely, while sick with bilious fever, knowing its composition, and recommended it to his patients as soon as he got out amongst them again, as a drink that would allay thirst, with the least amount of fluid, of anything with which he was acquainted: But whinh see.
will prefer Prof. Hufeland's drink for Fever Patients,

## 4. Apple Ciser to Kebp Sweet, with but Triplina

 serve cider in a palatable state for any considerable time; place, and the it of pomace, and then to keep it in a cool air-tight, by bottling the place the better. And then if kept not take the time nor expense of better, but farmers canleach it through charcoal, and of bottling. Some persons and thim, to get elear of the others boil, or rather scald older, that is designed to komaoe. In tho first place; In tho first place;winter; should be
made from ripe, sound, sour apples only, and consequently it will be getting cool weather, and less likely to ferment. Then when made:
Stand in open cacks or barrels, and pat into each barrel about 1 pt. each of hickory (if you have them, if not other hard wood), ashes and fresh slacked lime; stir the ashes and lime first into 1 qt. of uew milk, then stir into the cider. It will canse all the pomace to rise to the surface, from which sou can skim it as it rises, or you cau let it remain about 10 hours, then draw of b 5 a paicet ncar the bottom, through a strainer, to avoid the hardened pomace.

It is now ready for bottling or barreling, if too mach trouble to bottle. If you barrel it, it has been found essential to sulphur the barrel. The sulphuring is done by dipping cotton eloth into melted sulphur, and drying it ; then cutting into strips about two by six inches. Put abont three gallons of cider into the barrel ; fire one end of the strip of the sulphared eloth, and introduce it into the bunghole, and hold it by means of the burg, giving it air sufficient to let it burn, keeping the smoke in as it burns, when you will push the bung in tight and shake the barrel until the sulphur gas is absorbed into the cider; then fill up the barrel with cider, and if not already in the cellar, place it there, and you have accomplished the two points first spoken of. If the above plan is too much labor, get oil barrels, if possible, to keep your cider in, (as vinegar can scarcely be made in an oil barrel,) the oil coming out a little and forming an air-tight coat on the top of the cider in the barrel. Or:
5. Make your cider late in the Fall, and when made, put into each barrel, immediately, ground mustard 1 lb . ; salt 2 oz. ; pulverized chalk 2 oz. ; stir them up in a lithe of the cider, their pour
into the barrel and shake well.

I have drank cider kept in this way, in August, which was made in early Spring; it was very nice.
6. I have had oider keep very nice, also, bo keeping in a cool cellar, and putting into each barrel :

Always ship your cider, if you have cider to ship, late in the Fall or early in Spring, for if taken sut of a cool cellar

## D. GTLASE'S REODTHS.

in hot weather it is sure to start fermentation.
for medicine, proceed as in the following recipe: If wanter 7. To Prepare for Medioine-To cider just pressed from ripe, Medione.-To each barrel of Take mustard seed verized 1 oz . ; put all inground, 1 lb .; isinglass 1 oz ; alum pulshake or stir once a day for four darrel, leave the bung out, and and half a dozen eggs, beat well tays, then take new milk 19 and., cider and stir or shake again, os together, and put them into the settle until you see that it is clear, and are, for 2 days; then let it And if you wish to and and draw of by fancet. pat it into bottles ; but if des place of wine, in medioine, barrel it, bunging it tight, angned for family use you can you will have al very nice article, keep cool, of course, and too near a woll ox running stream if the cidar was not made that if made too near these, stream of water; but it is found ye why!
apples, letting it wart England, by using only rtwo, sound so., \&co., cider is kept from tracking off about twiee, bottling, cider is drawn off and fott twenty to thirty years. When the next day after filling thed, it should not be corked until burst. Then lay on the side. bottles, as many of them will
SYRUPS.-To Mare tran Various Colors. - Powder cochineal oz; soft water 1 pt.; boil the cochineal in the water for a few dered alum, and 1 dr. of cream ; while bolling auld 30 grs. of pow. Is all out of the cochineal remore it; when the coloring matter littlo cool, strain, bottle and set aside for use. the fire, and when s This ives a syrups only. Colored rather and is used in the strawlerry left without color. Wintergreen in shade. Pine apple is óamwood, (not deep.) Lemon and colored with tincture of turmeric. (See Tinetures.) Lem and ginger with-tincture of are not colored high-a light shade two last named syrups
 syrups onght to be the sam Fhavors. - The groand work of all take 21 lbs . of the best confe. i. e. Simple Syrup ; to make ith, talize, and water 1 pt, or whe sugar, whioh is found not to e.fy,

Lam that forms upon it, and atrain while hot. This can be kept in a barrel or keg, and is always roady to flavor, an desired.
3. Rabpberry-Is made as follows:

Take orris root, bruised, any quantity, say $\frac{\mathrm{lb} \text {., and just hand- }}{}$ somely cover it with dilute alcohol, $[76$ per cent. alcohol, and water, equai quantities], so that it cannot be made any stronger of the root.

This is called the "Saturated Tincture;" and use suffipient of this tincture to give the desired or natural taste of the raspberry, from which it cannot bo distinguished.

## 4. Strawberry-Flavor is as follows:

The saturated tincture of orris, as abovo, 2 ozf., acetio-ether, 2 drs. ; mix, and use sufflient to give the denlred favor-a very little only is required, in either case.
5. Pine Apple flavor is made by using to nuit the taste, of butyric ether. If persons have any doubt of these facts simply, try them. Some think syrups oven for fountains, charged with carbonic acid gas, that it is best to use about three-fourths oz. of tartario aoid to each gallon, but I prefer none unless the fountain is charged with the supercarbonate of soda, in which case it is neceessary to use about three-fourths oz. of the acid to each pound of sugar. See Soda Syrups.

This, above plan, for making simple ayrun, is the true way of making all syrups; but somo poople think they must use more water, that the syrup may be cheaper. Others will object to using artificial flavors. Ohl they say: "I kuy the genuine article." Then, just allow ine to say, don't bay the syrups nor the extracts, for ninety-nine hundredths of them are not made from the fruit, but are artificial. Rather make your own, as given under the head of Jams and Extracts. For the more watory syrupa, see "Soda Syrups."
6. Sarsaparilila-Is very nioe as follown:

Simple symp, as nhove, and nice goîen fyriup, equai quantities of eush, and mix well; then use a fow drops of olls of wintergreen and sassafras to each bottle, as used.

The amounts for the desired flavors onnnot be given exaotly to suit every one, but all will wish differont flavors;

## DR. OHASk'S REOTPEG.

in some towns, using very high flavor, and in others suffcient to perceive it, merely. All will soon get a plan of their own, and like it better than that of others. This mixture of mlden syrup makes the sarsaparilla a beautiful dark color triibnut other coloring.
7. Lemon Sxrup, Cobimon-Was formerly mado by dissolving four pounds of orushed sugar in one quart of water by boiling, and adding three ounces of tartaric aoid and flavoring with the oil of lemon; but it is best made as follows:

$$
\begin{aligned}
& \text { Coffee sugar } s \text { ibs ; water } 14 \text { pts. ; dissolve by gentle-heat, and } \\
& \text { add citric acid } 3 \text { ozs., and favor with oll or extract of lemoon. } \\
& \text { See "Extracts." } \\
& \text { 8. Or a very nice lo }
\end{aligned}
$$

8. Or a very nice lemon syrup is made ae follote tore
 quar

Rub the acid and oil in three or fove spoons of the syrup, then add the mixtare to the remainder, and dissolve with gentle heat. Citric acid is not as likely to cause in fammation to syrups calculated fie tartario, hence. its better adapta-
9. Lemon Strup-To Sate rinks, and especially in dis ase. have lemons that are spoiling or drying of Lemons. - Where you are yet sound, squeeze out the juice, ang take the insides which white sugar, and a little of the peel ; and to each pint put $1 \frac{1}{2} \mathrm{lbs}$. cork for use. -

This will not require any acid, and one-half tea-spoon of soda to three-fourths of a glass of water-half tea-spoon of table-spoons of syrup, makes a foaming with two or three sons think they ought to put in water glass. Some perthe syrup will not keep as well, and water, but if water is added
10. Sods Syaup, Witr on , and takes more of it. or more watery syrups are made Wribout Fountanns.-The common 8 lbs . ; pure water 1 gal. ; made by using loaf or crushed sugar copper kettle ; boil until the gum is 2 ozs. ; mix in a braes or strain through white flannel, after which dissolved, then skim and dissolve in hot water; to fiavor, use add tartaric acid $5 \frac{1}{2}$ oz. ; roso, pine apple, peach, sarsaparilla, strawberry of lemon, orange, (orry, \&o., $\frac{1}{2}$ oz. to each - furitis of a tumbler of water and of the syrup to threeurtins of a tumbler of water and one-half tea-spoon of
in -others suffon get a plan of fothers. This rilla a beautiful
erly made by 1 one quart of of tartaric acid s best made as

common shed sugar a brass or skim and id $5 \frac{1}{2} \mathrm{oz}$;
n, orange,
z. to each
to threespoon of super-oarbonate of soda, made fine; stir well and be ready to drink, or use the soda in water as mentior.ed in the "Imperial Orc.m Nectar;" the gum arabio, nowever, holds tha earbonio acid so it will not fly off as rapidly as commoa soda. The above is to be used without fountains, that is to make it up as used, in glasses, or for tho oheaper fountains which havo an ounce of super-carbonate of sode. e gallon of water; but for the fountains which are charged, in the oities, with carbonio acid gas, no acids are used in the
syrape.
11. Crmay Soda, Usiva Cow's Cream, -... inuntanns,-Nice loaf augar $\delta$ lbs. ; sweet rich cream $1 \mathrm{qt}$.$; \quad ...... 1 \frac{1}{2}$ gills; warm gradualiy no as not to burn ; extract of vanilla $\frac{9}{4}$ oz. ; extract of
Just bring to boiling heat, for if you cook it any length of time it will crystalize; use four or five spoons of this syrup instoad of three, as in other syrups. I" used without a fountain, tartaric acid one quarter pound is , Ided. The tendenoy of this syrup is to sour rather quicker than other syrups, but it is very niee while it lasts; and if only made in small quantities and kept cool, it more than payis for the trouble of making often.
12. Ormax Soda writoot $a$ Foontant.-Coffee sagal -i lbs. $;$ water 3 pta. ; nutmegs grated 3 in number; whites of 10 eggi well beaten; gum arabio 1 oz ; oil of lemon 20 drops ; or extract equal to that amount. By using oils of other fruits you can make as many flavors from thls as you desire, or prefer.
Mix all and place over a gentle fire, and stir well about thirty minutes; remove from the fire, strain, and divide into two parts ; into onc-half put super-carbonate of soda eight ounces; and into the other half put six ounces tartaric acid; sluke well, and when cold they are ready to use, by pouring three or four spoons, from both parts, into separate glasses which are one-third full of cold water; stir each and pour together, and you have as nice a glass of cream soda as was ever drank, which can also bedrank at your lisisure, as the gum and oggs hold the gas.
19. Soda. Water Without a Macmine for Butmang.-In each gallon of water to bo used, carefully dissolve $\frac{1}{2} \mathrm{lb}$. of crushed pint botilew with this. water, have jour corks ready ; now drop

## DR. OHASE'S REOLPES.

into each bottle $\frac{1}{2}$ dr. of citric acid in crystals, and immedintely cork and tie down These bottles must be handled oarefully without shaking, and kept cool until needed; a little more or loss sugar can be used to suit the taste of different persons. OYSTER SOUP.-To each do pint of water; milk 1 gill ; butter or dish of oysters put a hulf thicken. Bring the oysters and $\frac{1}{2}$ oz.; powdered crackers to other Ingredionts prevlously mized water to a boil, then add the minutes only. Each one will ohoose to add salt, pepper, \&c., to their own taste. Keep about these proportions if you should have to cook for an oyster supper for parties, \&o. TRIPE.-To Prepare an Pickle turned inside out; 'be careful to sewn-First sew it up, after it is into it ; now have a tub of lime sew it up tight, that no lime gets thick whitewash; let it remaine water, the consistence of good when you take hold of $i t$, the in from 10 to 20 minutes, or until then put it into clean water, chark outside skin will come off; weaken the lime, that the hands changing three or four times to dull kaife scrape off all the dart not injured by it ; then with a and serape several times, which remorface, and continue to soak and smell. After this, let it soak 20 ves all offensive substances waters, scraping over each time ; the or 30 minutes in 2 or 3 hot cut ins and it is ready for cooking ; boil prom in salt and water 12 cut in strips to suit, and put it into nice from three to four hours, spices, as desired; renew the vine nice vinegar with the varions week, is all that will be required further. at the expiration of one

> Many persons stick up their nose when tripe is spoken of; but if nioely prepared, I prefer it to any dish fwished by the beef. by the beef. MOLASSES CANDY AND POP-CORN BALLS-CANDY.-Eyaal quantikes of brown sugar and molasses, and put them indo sieve to free it of elivers and aticks pour it through a fine wire sugar; then return it to tho ketwhe which often found in the When you have dipped your hand in and continue to boil, until, or two fingers through the bolling cand water and passed one egg sholld water, what adheres when cand and immediately back egg shells, and does not adhere to the cold will crush like dry done, pour it on a stone or platter wheth when bitten. When as it gets cool begin to throw up thich has been greased, and pulling on a hook or by hto up the edges end worit it by㨁 goidi ; the hands should have a little bright and glistening

## ALLOON DETPARTHGHET.

69
ally; now keep ihe mass by a warm stove, if much is made at one time, and draw it into stick size, occasionally rolling them to keep roond, until all is pulled out and cold, then with shears clip a litue upon them, at proper lengths for the aticks, and they will snap quickly while yet the stick will bend ; no color, no butter, no lard or flavor is used or need be, yet any oil can be used for tavoring, If desired, when poured out to cool.
Sugar left in molasses barrels works very nicely in this preparation. Pulverized white sugar sprinkled amongst it will prevent it from stioking together.

## 2. Oandy Prrprotly White.-If it is desired to have

 onndy that is perfectly white, proceed as follows:Beat coffee sugar 2 27 lbs.; the nicest byrup 14 pts.; boil very carefully, until when aried as above, it crisps like egg bhells or fllen like glass ; then draw and work upon the hook until very white.
3. Molassess Candy Without Sugarn-Porto Rico molasses boiled and worked as above, has a cream shade according to the amount of pulling, and most persons prefer it to the mixture $a^{\rho}$ sugar and molasses, as in the first.
4. Pop Corn Balls.- Pop the corn, avoiding all that is not nicely opened ; place if bu. of the corn upon a table or in a large drippirg pan; put a littie water in a suitable rettle with sugar 1 when tried as for candy It 6 to 7 tsble spoons of the remove from. the fire and dip into boilling water upon gum arabic gum solution, made by pouring now dip the mixture npon different nght, or somichours before; atiok, or the hands, under the corn, pifting of the corn, putting a the corn is all saturated with candy, lifting up and mixing until press the corn into balls, as the coys mixture; then with the hands Lest it netz before you get through.
This amount will make about one hundred balls, if prop-orly done. White or brown sugar may be usid. And for variety, white sugar for a part, and molasses or syrup for another batch. Either of these are suited to street pedlars.

Aditon of Sugar or Candy on the Theth.-M. Larez, of brames, in the course of his investigations on the the teeth, has arrived at the following eszeluaiouis:
First-That "refined sugar, either from cane or beet, is injurs: oun to healthy toeth, either by immediste contact with these ozgany, or by the gas developud, owing to the atoppage in the

BEEESS.-Roor Bker,-For each gallon of wator to be nsed, taike hops, burdock, yellow dock, sarsaparilla, dandelion, and spikenard roots, bruised, of each $\frac{1}{2} \mathrm{oz}$; boil about 20 minutes, and strain while hot, add 8 or 10 drops of oils of spruce and sassafras mixed in equal proportions, when cool enough not to scald your hard, put in 2 or 3 table-spoons of yeast ; molasses $\frac{7}{8}$ of a pint, or white sugar $\frac{1}{3} \mathrm{lb}$. gives it about the right sweetness.

Keep these proportions for as many gallons as you wish to make. You can use more or less of the roots to suit your taste after trying it ; it is best to get the dry reots, or dig theni and let thein get dry, and of course you can add any other root known to possess medicinal properties desired in the beer. After all is mixed, let it stand in a jar with a cloth thrown over it, to work about two hours, then bottlo and set in a cool place. This is a nice way to take alteratives, without taking medieine. And families ought to make it every Spring, and drink freely of it for several weeks, and thereby save, perhaps, several dollars in doctors' bills.
2. Sproci or Aromatio Berm.-For 3 gals. water put in 1 qt. and one $\frac{1}{2}$ pt. molasses, 3 eggs well beaten, yeast 1 gill. Into 2 qts. of the water boiling hot put fifty drops of any oil you wish the flavor of ; or mix 1 ounce each, oils sassafras, spruce and wintergreen, then use 50 drops of the mired oils.

Mix all, and strain; let it stand two hours, then bottle, bearing in mind that yeast must not be pat in when the fluid would scald the hand. Boiling water euts oil for beers, equal to alcohol.
3. Lemon Beer.-Water 30 gala.; ginger root braised 6 ozs. ;
 yeast of the oil may be used, and 6 good sized lemons, sliced; yeast $1 \frac{1}{2}$ pts.
Boil the ginger and cream of tartar, about twenty to thirty minutes, in two or three gallons of the water; then strain it upon the gugar aniu oils or sliced lemons, which have been rubbea together, having warm water enough to make the whole thirty gallons just so you cen hold your hand in it without burning, or about seventy degrees of heat; then

 this sies; have beeo it.

It may be flavored with oils of apruce or lemore, if desired, by pouring on to the oils one or two quarts of the water, boiling hot. The corn will last fivo or six makings. If it gets top sour add more molasses and water in the samo proportions. It is rheap, healthy, and no bother with yeast.
8. Strong Beier, Evousish Inprovigd.-Malt 1 peck; coarse brown sugar 6 lbs ; hops 4 oz ; good yeast 1 tearcup ; if you have not malt, take a little over one peck of barley (twice the amount of oats will do, but are not as good,) and put it into an oren affeer the bread is drawn, or into a stove oven, and steam the moisture from them. Grind ouarsely.
Now pour upon the ground malt 31 gals. of water at 170 or $172{ }^{\circ}$ of heat. The tub in which you scald the malt ehonld have a false bottom, two or three inches from the real bottom ; the false bottom should be bored full of gimlet holes, so as to act as a strainer, to keep back the malt meal. When the water is poured on, stir them well, and let it stand 3 hoars, and draw oft by a fancet; pat in 7 gals. more of water at 180 to $182{ }^{\circ}$; stir it well, and let it stand 2 hours, and draw it off. Then put on a gal. or two of cold water, atir it well and draw it off; you should have abont 6 or 6 gals. Put the 6 lbs. of coarne brown sugar in am equal amount of water; mix with the wot, and boil 11 to 2 hours With the hops; you should have elght gale when boiled; when cooled to $80^{\circ}$ put in the yeast, and let it work 18 to $20^{\prime}$ hours, covered with a sack ; use sound iron hooped kegs or porter bottles, bang or cork tight, and in two weeks it will be good soond beer, and will keep a long time ; and for persons of a weak habit of body, and especially females, one glass of this with their meale is far better than tea or coffiee, or all the ardent apirits in the universe. If more malt is used, not exceeding if a bushel, the beer, of course, would have more epirit, but this strev-th is numoient for the use of families or invalids.
9. Are, Home-Brewed-How it is Made--The following formula for the manufacture of a famous ho mo-brewad ale of the English yeomanry, will convey a very clear idea of the components and mixture of ordinary ales. The middle plasses of the English people usually make their alo in quantities of two barrels, that is seventy-two gallons.
For this purpose a quarter of malt ( 8 bus .) is obtained at the malt-house-or, if wished to be extra strong, nine bashels of malt -are taken, with hops, 12 libe ; yeast, 5 quts.
 water at the temperature of 1600 , and oovered ap for 3 hours, When 40 gallons are drawn off, into which the hops are put, and left to infuse. Sixty gallons of water at a temperature of $170^{\circ}$ are then added to the malt in the mash-lub, and well

## 64

## DR. OEASE'S REOTPIRS,

mizod, and after standing 2 hours, bixty gallons are drawn of hours, and after these two mashes is boiled Filth the hops for two flannel bag into a fermenting town to $65{ }^{\circ}$, is strained through a yeast and left to work for 24 g tub, where it is mixed with the barrels to cleanse, a few gallons being hours. It is then ran into casks.as the yeast works over: Of course when the yeast is worked out it must be bunged. If one half a pint of this was taken each meal by men, and half that amount by females, and no other spirits, tea nor coffee, during the day, I hesitate not in saying that I firmly believe it would conduce to health. I know that this, whieb a man makes himself, or some of the wines mentioned in themselves to use in these all that any person ought to allow the governing influences of days when dollars and cents are 10. Pones of all who deal in such articles. Parts of Botiles for the Ine, to Prevent Flatness in are recommended to use ale, porter ons. - Sick persons who take a small glass at a time, nearter, or wine, and can only the bottle flat or stale. To prevent this, put in the cork firmtr, and tarn the cork-end downwards in a large trmbler or other vessel nearly filled will

12. Gnvarr Pop.-Water 51 gals. ; ginger root, bruised, $\ddagger \mathrm{lb}$. tartaric acld $\frac{1}{2}$ oz.; white sugar $2 \frac{1}{2}$ lbs. ; whites of 3 egge, well beaten ; lemon oil 1 teaspoon; yeast 1 gill

Boil the root for thirty minutes in one gallon of the water, strain off, and put the oil in while hot; mix. Make over night, and in the morning skim and bottle, kooping out sediments.
13. Spamish Ginampettri- - to each gal. of water put i lb. of white sugar ; oz. best bruised ginger root; $40 z$. of cream of tartar, and 2 lemons sliced.
Direotions.-In making 5 gals. boil the ginger and lemons 10 ninutes in 2 gals. of the water; the sugar and cream of tartar th Ne dissolved in the cold water, and mix all, and add i pint oi good yeast; let it ferment over night, strain and bottle in the morning.

This is a valuable recipe for a cooling and refreshing beverage; compounded of ingredients highly caloulated to assist the stomach, and is recommended to persons suffering with Dyspepsia or Sick Headache. It.is much used in European countries, and persons having onee tested its virtues will constantly use it as a common drink. And for saloons, or groceries, no temperance beverage will set it aside.
14. Shim-Champagne.-A Purhly Temperanom Drine-Tartario acid 1 oz ; one good sized lemon; ginger root 1 oz ; white nugar $1 \frac{1}{2}$ lbs. ; water 24 gals. $;$ yeast 1 gill.
Slice the lemon, and bruize the ginger, mix all, exce日t the yeast, boil the water and pour it upon them, and let stand until cooled to blood heat ; then add the yeast and let lt suind in the sun through the day; at night, bottle, tleing the corks, and la Nwo days it will be $\mathrm{f} t \mathrm{t}$ to use.-Mrrs. Beecher.

Be sure and not drink over three or four bottles af oue time.

YEISTS-Hóp Yeast.-Hops 1 oz.; water 3 pts. ; flour 1 tea 'sup; irrown sugar 1 tablespoon; salt 1 teaspoon; brewers' of

Boil the hops twenty minntes in the water, strain into jar, and stir in the flour, sugar, and salt, and when a hatle cool add the yeast, and after four or five hours cover un, and stand in t ecol place or on the ice for use.

The above makes a good family yeast, but the following is the regular bakers' yeast, as thev always kuep the malt on hand.

## DR. OHASE'S REOTPMS.

2. BaxE̊Rs' Ykast.-Hops 2 oz ; water 1 gal. ; wheat flour 2 lbs ;
malt flour 1 pt. ; stock yeast +pt . let cool until you can well bear your hand in it; then stir sn the flour and yeast; keep in a warm place until the fermention is well under way, and then let it work in a coolex place six or eight hours, when it should be put in pint bottles about half full, and closely corked and ticd down. By keeping this in a very, cool cellar, or ise house, it will keep for months, fit for use. But as it is often trnublesome to Obtain yeast to start with, I give you the " Distillcrs' Jug Yeast," starting without yeast.

## 

 water 1 gal.; fine malt flour $\frac{1}{2}$ pt. ; brown sugar $\frac{1}{2}$ lb.Boil the hops in the water until quite strong, strain, and stir in the melt fiour; and strain again through a eoarse cloth, and boil agaiu for ten minutes; when lukewarm, stir in the sugar, and place in a jug, keeping it at the same in a in a cool place.
4. Yeast Cake.-Good sized potatoes 1 doz.; hops 1 large handful ; yeast $\frac{1}{2}$ pt. ; ccen meal sufficient quantity.

Boil the potatoes, after peeling, and rub them through a cullender; boil the hops in two quarts of water, and strain into the potatoes; then scald sufficient Indian meal to make them the consistence of emptyings, and stir in the yeast and let rise; then, with unsoalded meal, thicken so as to roll out and cut into cakes, dry quickly, at first, to prevent souring. They keep better, and soak up quieker, than if
made with flour.
ICE CREAM.-Fresh cream + gal. ; rich milk $\frac{1}{2}$ gal. ; white sugar 1 lb ; some do use as much as 2 ibs. of sugar to the gallon, tet it leaves an unpleasant astringency in the throat after eating the cream, but please yourselves.
Dizsolve the sugar in the mixture, flavor with extract to sult your taste, or take tie peel from a fresh lemon and steep onehalf of it in as litile water as you can, and add this-it makes the lemon flavor better than the extract-and no fator wili so univer=ality please as the femon; keep the same proportion for any amount desired. The juice of strawberries or raspberries gives a beentiful color and flavor to ice nreams; or about $\frac{1}{2}$ oz. of essence
or exfrecta to a gallon, or to suit-the taste. Hüve your ice well broken ; 1 qt . salt to a bucket of lce.
Akput half an hour's constant stirring and cecosional scraping down ar 1 beating together, wili freeze it. The old-failhioned freczer which turns in a tub of ice, makes smoother and nicer ice-cream than all the patent freezers 1 have seen; and the plan of using the genvine cream and milk gives sulticient profit; but I will give you the best substibutes there are, in the following reoipe, but the less you eat of either the better will it be for your health.
2. Ioe Creak, Vert Cheap.-Milk 6 qis. ; Oswego corn atarch. balf a pound.

First dissolve the nix all together, 1 st simmer a little*(not to boil). Siweeten and flavo. $\omega$ suit your taste, as above; or-
3. Irish moss $1 \frac{1}{2} \mathrm{oz}$; mulls 1 gal.

First soak the moss in a little cold water for an hour, and $=$ inse well to clear it of sand and a certain peculiar taste; then steep it for an hoar in the milk just ait the boiling point, but not to boil; it imparis a rich color and flavor without eggs or cream. The moss may be steeped twice.
It is the Ohioage plan. I have eaten it and know it to be very nice. $\Delta$ fow minutes rubbing, at the end of freez-- ing, with the spatula, against tho side of the freezer, gives ica oream a smoothnas not otherwise obtained.

WINMS.-Ourbana, Oherry, and other Berry Wines.- The juice of either of the above fruits can be used alore, or in combications to make a variety of lavors, or suit pursons who have some and not the other kinds of fruit.
Express all the juice you can, then take an equal amount of boiling waber and pour on the pressed frult, let stand two hours, squeeze or tos much as there is of juice, and mix, then add 4 lbs . of brown , segar to each gallos of the mixture; let stand until worked, of 3 or 4 weeks, withcut a bung iu a keg or barrel, rimply put.ing a plece of gauze over the bung-hole to keep.out files ; when it is done working, buag it up.

A cool collor, of eourao, is the best place for reoping wines, as they must be kept where they will not freese. Some persma use only oue-fourth juice, in making fruit wines, and three-fourtho water, but you will bear in mind
that the wine will be good or bad, just in proportion to the water and sugar used. If care is taken when you express the juice, to prevent the pulp or seeds from entering or remaining in the juice, no other straining or racking will be nceded. Most persons also recommend putting in brandy, but if any spirit is used at all, let it be pure alcohol, from one gill to one-half pint only per gallon, but the strength of juice I recommend, and the amoint of sugar, remove all necossity for any addition of spirit whatever. Bear in mind that all fruit of which you are to make wine ought to he perfectly ripe, and then make it as soon as possible thereafter, not letting the juice ferment bcfore the addition of the sugar. If bottled, always lay them on the side.
2. Riubarb, or English Patent Wine.-An agreeable and healthful wine is made from the expressed juice of the garden rhubarb.
To each gal. of juice, add 1 gal . of soft water, in which 7 lbs . of brown sugar has been dissolved; fill a keg or a barrel with this proportion, leaving the bung out, and keep it filled with sweetened water as it works over, until clear; then bung down or bottlo as you desire.

These stocks will furnish about three-fourths their weight in juice, or from sixteen hundred to two thousand gallons of wine to each acre of well cultivated plants. Fill the barrels and let them stand until spring, and bottle, as any wiac will be better in glass or stone.
3. Some persons give Mr. Cahoon, of Kenosha, Wis., credit for originating pie-plant wine, but that is a mistake; it has long been made in England, and has even been patented in that country. They first made it by the following directions, which also makes a very nise article, but more applicable for present use than for kesping.
For every 4 lbs. of the stocks cut fine, pcur on 1 gal. of boilling water, adding 4 lbs. of brown sugar ; let stand covered 24 hours; having also added a little cinuamon, allspice, oloves and nutmeg, bruised, as may be desired for flavoring; then strain and let work
a few days, and bottle
4. Tomato Wrise. - Express the juice from clean, ripe tomatoeas and to each gallon of it, (Filitiont any water,) put brown sugar 4 Hbs.
Put in the sugar immediatoly, or before fermentation

begins-this ought to be done in making any fruic wine. Something of the character of a cheese press, hoop and cloth, is the best plan to squeeze out the juioc of tomatoes or other fruite. Let the wine stand in a kog or barrel for two or three months; then draw off in bottles, carefully avoiding the sediment. It makes a most dolightful wine, having all the beauties of flavor belonging to the tomato, and I have no doubt all its medioinal propertion also, either as a tonic in disease, or as a beverage for those who are in the habit of using intoxicating beverages, and if such persons would have'the good sense to unake some wine of this kind, and use it inster $d$ of rot-gut whisky, there would not be one-hundredth part of the "snakes in the boot" that now curse our land. It must be tasted to be appresiated. I have it now, which is three years old, worth more than moch pretended wine whioh is sold for three or four shillings a pint.
5. Tomato Cuitrvitron, for Earip and Latz.-The Working Farmer says of the tomato plant:-"That it bearn 80 per cent. of its fruits within 18 inches of the ground, whlle more than half the plant is above that part. When the branches are cut they do not bleed, and thev may therefore be shortaned immedlately above the large or early-watting fruit.
"The removal of the small fruit on the ends of the branches is no loss, for the lower fruit will swell to an unnatural size by trimming, and both a greater weight and measure of fruit will be the consequence, bosides obtaining a large portion five to fifteen days earlier. The trimming should be done so as to have a feew leaves beyond the fruit, to insure perfect ripening. The importanoe of carly manuring is too evident to need comment. Tho burying of the removed leaves immediately around the plant is a good prectice, both by insuring full disturbance of the soil, and by the presenting of a fertilizer progressed procisely to the point of fruit making. .The portions buried decay rapidly, and are rapidly assimilated." If wanted very early and. large, trim off all except two or three upon each plant.
6. To ripen late tomatoes, pull the plants having green tomatueg on them, before the commenoermentiof frovis, and hang them. In a well ventilated cellar.

The iruit will continue to ripen until early winter, especially if the cellar is cool and damp.

## Dg. ofasmex reotrpa

7. Thi Tomato as Food.-Dr. Bennett, a professor of some celebrity, considers the tomato an invaluable article of diet, and ascribes to it various important medical properties.
Brrst-That the tomato is one of the most powerful aperients for the liver and other organs; where calomel is indlcated, it is probebly one of the most effeetive and least harmful remedial agents known to the profession. Second-that a ohemical extract will be obtained from it that will supersede the use of calomel in the oure of disease. Third-that he has successfully treated Diarthoea with this article alone. Fourth-that when used as an article of diet, it is an almost sovereign remedy for Dyspepsia and indigestion. Fifth-ihat it shonld be constantly used for daily food, either cooked or raw, or in the form of catchap; it is the most healthy article now in use.

Knowing personally the value of the tomato in disease, for food and wine, I freely give all the information regarding it which I can, that others may make as free use of it as healch and economy demand, consequently, I give you the next item, which I have learned just as the type were being set, upon this subject in 1860.
8. Tomatoes as Food for Ca. Mr. Havis, the editor of the "Miehigan State News," Ann Arbor, Mich., says, "that he has fed his cow, this season, at least ten bushels of tomatoes."
His plan is to mix a little bran with them ( 3 qts . to a half bushei of tomatoes, when fed; they cause an excelient flow of rich and delicious milk.

He did not think of it wntil after the frosts, when observing them going to Waste, Sa thought to see if she would eat them, which she did freely, from the commencement. I have also known pigs to eat them, but this is not common. In 1862, I tound my cow to eat them as freely as spoker of by Mr. Davis.
9. Wine, rrom Write Conrants.- Ripe, white currants, any quantity ; squeeze out the juice, and put on water to get out as much more as therc is of the juice, and mix the two, and to each gallon put 37 lbs. of sיygar ; let it work without boiling or skimming for 2 or three months, then rack off and bottle.

The white ourrant has less acidity than the red, and does
 wine eqral to this. 10. Gargar Wank-Alcohol of 98 per cent 1 gt $;$ best ginger

100t, 1 Wo Now been coohl of alt use colos.

Tl
any a pin ioinal Let a pint the st cover washi mean towel cold. Ladie etreng appeti ing, b almusi twont or two use it 11. 1 boiling ring oc lbs. of pach ge

Cor and yo or boil under

I for wine B in slek case. tried it
coot, bruised, 1 oz. ; cayenne 5 grs ; tartario soid 1 dr. ; let ptand 1 week and fllte, or draw off by faucet above the sediment. Now add 1 gal. of water in which 1 lb . of orushed sugar has bcen bolled. Mix when cold. To make the color, boil il oz. of oochineal, ${ }^{\frac{7}{4} \text { oz. of cream of tartar, } \frac{1}{2} \text { oz. of saleratus, and } 1 \text { oz. }}$ of alum, $\ln ^{1} 1$ pt. of water until you got a bright red color, and use proper amount of this to bring the wine to the desired color.

This wine is suitable for near!y all the purposes for which any wino is used, and a gallon of it will not cost more than a pint of many wines sold throughout the country for medioinal purposes, represented to be imported from Earope. Lot a man, suffering with a bad cold, drink about half a pint of this wine hot, on going to bed, soaking his feet at the same time in hot water fifteen or twenty minutes, and covoring up warm and sweating it out until moraing, then washing off his whole body with cool or cold water, by means of a wet towel, and rubbing briskly with a coarse dry towel for four or five minutes, will not be able to find his cold or any bad effects of it in pue case out of a hundred. Ladies or ohildren would take less in proportion to age and atrongth. Females in a weakly oondition, with little or no appetite, and spare in flesh, from food not properly digesting, but not yet ripened into actaai indigestion, will find almust ontire relief by taking half a wine-glass of this wine twenty 'minutes before meals, and following it ap a month or two, according to their improved condition. Dor Samily use it is just as good without color, as with it.
11. Blaokrenay Wing.-Mash the berries, and p 1 qt. of boilligg water to each gal. ; let the mixture stand 24 hours, stirring oocauslonally ; then strain and measure into a keg, adding 2 lbs. of sugar, and good rye whiskoy 1 pt., or best alcohol'1 pt. to pach gal.

Oork tight, and let it stand until the fcllowing Ootober, and you will have wine fit for use, without further straining or boiling, that will make lips smack as they never smacked under its influence before.

I feel assured that where this fruit is plenty, that this wino should take the place of all others, atit it is invaluable in siokness as a tonic, and nothing is better for bowel discase. - I therefore give the recipe for making it, and having tried it myself, I speak adrisedly on the subjeot

Tho Dollar Times, Cincinnati, O., first published this recipe, not using any spirits, but I find that it will often sour without it.
12. Lawton Blackberry-Its Oultivation.-An editor at Coldwater, Mioh., says of this fruit:-"That where it is best known it is one of the most F pular small fruits that has ever been cultivated. It has been known to produce over one thousand full-grown ripe berries in one season on a single stalk; the average size of fruit being from threefourths to one and a half inches in diameter; quality excellent, very juioy, seeds very small, and few in number. Five quarts of berries will make one gallon of juice, which, mized with two gallons of water and nine pounds of refined sugar, will make three gallons of wine, equal in quality to the best grape wine. Professor Mapes, and many others, who have tested the qualities of the same as a wine fruit, speak of it in terms of the highest praise.
13. Port Wres.-Fully ripe wild grapes 2 bu. ; best aicohol 3 gals. ; sugar 25 1No. ; water to fill a barrel.
Mash the grapes without breaking the seed; then put them isto a barrel with, the sugar and alcohol, and fill up with rain water, and let it lie a few weeks in tho sun; or if the weather has become cold, in a warm place, then in the cellar until spring; then rack off and bottle, or plaee in perfectly clean kegs or barrels, and you have a better articlo than nine-tenths of what is represented as imported Port.

## 14. Cider Wine.-Prof. Horsford, a celebrated chenist,

 communicated the following recipe to the Horticultural Society of Massachusetts, and recommends it for general trial:[^0]
## gatoon departmannc.

When, after a few days, the cidor has become clear, draw of wwefilly. to aroind the rediment, and bottle. If loosely corked, waich in wether, il will become a sparkitig cider wine, and may be kept lideanitely long.

This has been tried with varied success; those who do not think it too much to follow the directions, obtain a good artiole, but others, supposing it to do just as well without sugar, or drawing off, or bottling, have found but little sat-inflaction-they have no reason to expect any; and yet they might be well satisfied to obtain a good wine from the orchard, even with all the above requisitions.
1.5. Grarg Wine.-" Ripe, freshly picked, and selected, tame grayps, 20 lbs ; put them into a stone jarand pour over them 6 qta. of boiling soft water; when sufficiently cool to allow it, you will rqueeze them thoronghly with the hand ; aiter whlch allow them to stand 3 lays on the pomace with a cloth thrown over the jar, then squceze out the joice and add 10 lbs . of nice crusbed angar, and let it remain a week longer in the jar; then take off the rcum, strain and bottle, leaving a vent, until done fermenting, Then straln again and bottle tight, and lay the bottles on the side

This wine is the same as used by the Rev. Orrin Whitmore, of Saline, Mich., for sacramental purposes. I havo tastod it myzelf, and would prefer it for medicinal uses to nine-tenths of the wine sold in this country. With age, it is nice. I am of the opinion that it might just as well remain in the jar until it is desired to bottle, and thus save the trouble of the extra straining. For I have now wine, fous years old in my cellar, made in Evansville, Ind., from the grape, which was made without the addition of any particle of matter whatever. Simply, the juice pressed out; hauled in from the vinery, put into very large casks in a cool cellar, not even racked off again under one year from the time of making. It tastes exactly like the grape itself; this, you will peroeive, saves much trouble in racking, straining, \&c. I am told by other wine makers also, that if oare is observed when the juice is pressed out to kecp clear of the pomace, that wine is better to stand without racking or straining, and that nothing is found in the barrels, after the frist jear, buve the crude tartar or wine-stone, as some call it, which all grape wine deposits on the side of the cask. These wines are every way appropriate for sacramental and madicinal
purposes, and far more pure than can be purchased once in a hundred times, and if one makes their own, they have the satisfaction of knowing that their wines are not made of what is vulgarly, yet truly called, "Rot gut whisky.".
16. Colonife ron Wines.-White sugar, 1 lb ; water 1 gill ; put into an iron kettle, let boil, and burn to a red black, and thick; remove from the fire and add a iittle hot water to keep it from hardening as it cools; then bottle for use.

Any of the foregoing wines can be colored with this, as desired, but for family use I never use any color.
17. Stoxach Bittrrs Equal to Hosteters', for Onis Foutita its Cost, and Soziedam Scinapps Exposed.-European Gentian root, $11-2 \mathrm{oz}$; orange peel $21-2 \mathrm{oz}$; cinnamon 1-4 $\mathrm{om}_{\text {. }}$, anise seed 1-2 oz. ; corlander seed $1-2$ oz. ; cardamon seed $1-8$ oz.; unground Peruvian baris 1-2 oz.; gam kino $1-4$ oz. ; bruise all thene articles, and pat them into the best alcohol 1 pt.; let it stand a week and pour off the clear tincture; then boil the dregs a few minntes in 1 qt. of water; strain and press out all the strength ; now dissolve loaf augar 1 lb ., in the hot liquid, adding 3 qte. cold water, and mix with the epirit tincture first poured off, or you can add these, and let it etand on the dregs if preferred.
18. NOTE.-Scatedan Scenapps. Falsely so Called.-It ia gene: rally known that in Schiedam, Holland, they make the hest quallty of Gin, colling it "Schiedam Schnapps," consequently it might be expected that unprincipled men would undertake Its imitation; wut hardly oos 'd it have been expected that so base an imitatlon would start into existence under the guidance of a man, who, at least, culls himself honorable.
Take gentian root 1-4 lb. ; orange peel 1-4 lib. ; puds $1-2 \mathrm{lb}$.; (but if this last cannot be obtained, poma aurantior, unripe oranges), or agaric $1-4 \mathrm{lb}$; best galangal 1-4 lb ; centaury $1-4$ lb.-cost- $\$ 1$ 20. Put pure spirits, 10 gals., upon them and let them stand 2 weeks; stir it every day, and at the end of that time pat three gallons of this to one barrel of good whisky ; then bottie and label ; and here follows the label :
aromatio sciiedam schnapps, a Superiative Tomto, Diverito, Anti-D Drspeptio, and 1nviaorattig Gordial-Tints Medionc. Beymeam is manufactured at Soheldam, In Holland, and in warranted free from every injurious property and ingredient, and of the best possible quality.
Its extraordinary medicinal propertles in Gravel, Gout, Chronic Rheumatism, Incipient Dropsy, Flatulency, Cholio Pains of the Stomach or Bowels, whether in adults or infanta. In all ordinary cases of nosstruction in the Kiãneys, Bladuer, and Ürinary organs, in Dyspepsia, whether Acute or Chronio, in general Debility, slaggish Oircniation of the Blood, Inadequate Assiml-

 Rom thing tower are 001lation of Food, and Exhausted Vital Energy; are acknowledged by the whole Medical Faculty, and attested in their highest written authorities.
I purchased the foregoing recipe of an extensive dealer in Evansville, Ind. ; he put up the stuff in quart bottles, and labeled it as I bave shown you ; bis label was got np in splendld style, bronzed letlers, and sent out to the world as pure "Schiedam Schnapps" at $\$ 1$ per bottle.
I have glven you the whole thing, that the thousands into whose hands this book may fall shall know what confidence, or that no confidence whatover, can be placed in the "Advertised Nostrums" of the day, but that the only securlty we have is to make our own or go to those persons whom we know to be sclentific, obtain their presoription and follow their counsel. Every person knows that real Holland Gin possesses diuretic and other valuable properties; and who would not suppose lio was getting a gemuine article from this Flaming, Bronze-crested Label, pointing ont especially all the complaints that Schiedam-lovers are wont to complain of ! And yet not one drop of gin to a barrel of it. And my excuse forthls exposure is that they and all who may have occasion to use such articles may know ihat "good whisky" ought to be afforded at less than $\$ 4$ per gallon, even if $\$ 120$ worth of bitter tonics are put into $3 \frac{1}{2}$ barrels of the precious stuff.
Then take our advice where gin or other liqnor is nonded, as mentioned in the first recipe in the Medical Department.

## MEDICAL DEPARTMEETT,

I would give an introductory word of Caution in this Department.

Whenever you buy an article of medicine which is not regularly labeled by the Druggist, have him, in all cases, write the name upon it. In this way you will not only save money, but perhaps life. Arsenic, phosphorus, laudar num, acids, \&c., should always be put where children cannot get at them. And always purchase the best quality of drugs to insure success. RTM, or Gin sp mex Pazenat Dat.-There is no one thing doing so much to bolster up the tottering yet strong tower of Intemjerance, as the Old Fogy Physicians, who are constantly presoribing these artioles to their patients,
and one-half of the reason for it is to cover the faults of their own constant use of these beverages. This unnecessary call for theso articles thus used as a medicine, keeps up a large domand; and when wo take into consideration the almost impossibility of obtaining a genuine artiolo, the sin${ }^{\circ}$ of prescribing them becomes so much the greater, when it is also known by all really scientifio men that with aleohol (which is pure) and the native fruit wines, cider, and cidor wincs, (which every one can make for themselves, and can thus know their purity,) that all the indications desired to bo fulfilled in curing disease can he necomplished without their use.

Then, when it is deemed adrisable to use spirits to preserve any bitters or syrups from souring, instead of 1 qL. of brandy, rum or gin, use the best alcohol $\frac{1}{2}$ pt., with about 2 or 3 ozs. of crushed sugar for this amount, increasing or lessening according to the amount desired in these proportions. If a diurelic effect is desired, whioh is calculated to arise where gin is prescribed, put 1 dr. of oil of juniper into the aicohol before reducing with the water ; or if the preparation admits of it, you may put in from 1 to 2 ozs . of juniper berrips instead of the oil. If the astringent effect is desired, as from brandy, use, say, + oz. of gum kino or eatcha, either, or a half of each may be used. If the sweating or opening properties are required, as indiented by the prescription of rum, swesten with molasses in place of the sugar, and use 1 dr. of oillof caraway, or 1 to 2 ozs . of tho sced for the above amount, as the juniper berries for gin.
If the estrength of wine only is desired, use 1 qt . of the ginger wine, or if that flavor is not fancied, use any other of the wines os preferred by the patient.
But no one should use any of the descriptions of aicohol as a constant beverage, oven in medicine, unless adrised to do so by a physician who is not himself a toper.

If families will follow the directions above given, and use proper care in making some of the various fruit wines as given in this book for medical use, preparing cider, \&o. which is often used in proscriptions, thoy would seldom, if ever, be obliged to call for the pretended pure brandies, rums, gins, \&o., of commerce, and intemperance would die a natural death for want of support.

And you will please allow me here to correct a common error, "with regard to the presence of alcohol in wines. It is generally supposed that wine made from fruit, without phtting some kinds of spirits into it, does not contain any
aloohol; but a greater mistako does not exist in the world. Any fruit, the juice of which will not pass into the vinous fermontation by which alcohol is produoed, will not make wine at all; distillation will produce brandy or alcohol from any of these fermented liquors.
There is no wine of any note, contelaing ler; than 10 parta of alcohol to 100 parts of the wine ; and roys that nount up to. 20 d parts ; currant 201 ; gooseberry 114; cilur fron: 5 to 9 parts ; porter $4 \frac{1}{2}$; even smail beer $1 \frac{1}{4}$ parts 01 att to 100 , ts.

So it will be seen that every quart sacit wine not mado for medicine, or sacramental purposes, helps to build up tho cause (intemperance) which we all so much desire not to enoourager. And for those who take any kind of spirits for the sake of the spirit, let me give you the following:
2. Spiritual Facts. -That whis-key is the key by which many gain entrance into our prisons and almhouses.
3. That brandy brands the noses of all those who oannot govern their appotites.
4. That punch is the cause of many un-friendly punches. bier.
5. That ale causes the uilings, while beer brings to the
6. That wine causes many to take a winding way homo.
7. That cham-pagne is the source of many real pains. old.".
8. That gin slings have "slewed" more thay "7ings rf
ague medicines.-Dr. Krieder's Pilis.-Quinue 20 grs.; Dover's powders 10 grs ; sub-carbonate of iron 10 grs. ; mix with ; mucllage of gum arabic and form into 20 pills. Doss-Two ench hour, commencing 5 hours before the chill should set in. Then take one night and morning, until all aro taken.
I oured myself of Ague with this pill after having it hang on to me for three years with all the common remedios of the day, five weeks being the longest I could keep it off, until I obtained the above pill. This was before I had studied medicinc. I have cured many others with it also, never having to repeat the dose only in one case.
In attacks of Ague, it is best to take an active cathartie immediatcly after the first 'fit,' unless'the bowels are lax, which is not generally the case, and by the time the cathartio has worked off well, you will be prepared to go ahead with the 'cure' as soon as you know its periodical return.

## De. OHAsm's REOPDEs.

4. For verg young children, nothing is better than 5 or 6 grts. of quinine in a 20 oz . Fial with 1 tablespoon of white sugar, then fill with water. Dosis- $A$ teaspocn given as above, as to time. A thick eolation of licorice, however, hides the taste of the quinine quite effectually.
5. Agun Bryters.-Quinine 40 grs. $;$. capsicum 20 grs. ; oloves年 oz. cream of tartar 1 oz, ; whisky 1 pt.; Mix. Dose- 1 to 2 tablespoons every 2 hours, beginning 8 hours before the chill comes on, and 3 times daily for several days. Or, if preferred without spirits, take the following:
6. Ague Pówder.-Qninine 10 grs.; capsicum 4 grs. ; mix and divide into 3 powders. Directions-Take one 4 hours before the chill, one 2 hours, and the third one hour before the chill should commence, and it will very seldom commence again. Or
7. Agur Mixture without Quinine.-Mrs. Wadsworth, a few miles south of this city, has been using the following Ague mixture over twenty years, euring, she says, more than forty cases, without a failure. She takes-
Mandrake root, fresh dug, and pounds it ; then squeezes out the juliee, to obtain 1s table-spoons ; with which she mixes the same quantity of molasses, dividing into 3 equal doses of 1 table-spoon each, to be given 2 hours apart, commencing so as to take all an hour before the chill.

It siekens and vomits somé, kut she says, it will scarcely ever need repeating. Then steep dog-wood bark, (some call it box-wood,) make it strong, ard continue to drink it freely for a week or two, at least.
6. Agur Ourd, by a Olairvoyant.-There is nodoubt In my mind but what there is murh virtue in the following clairvoyant presoription, for I have knowledge of the value of one of the roots. See Oholi remedy:
Blee vervain, leaf and top, 1 lb ; bone set $\& \mathbf{l b}$. $;$.hest rye: whiskey 1 gal.

The dose was pnt given, but most persons would take a wine glass five or six times daily.
7. Aajer Curpd for a Penny.- It has deen discovered that nitric acid is of great value in tiee treatment of Intermittent Fever, or Ague. A physician administered the
 cessful in al: but one, 10 int rrupting the paroxysms, and there occurred no relapsso.
in

## TADIOAT DEPABTMDAN:

In the majority of cases, 5 or 6 drops of the strong acid, given in a little gum mucilage, every 2 hours, until 60 drops had been taken, were found sufficlent to break the fever, and restore the patient to health. The foregoing confirms the following :
8. Ague Anodinne-Muriatic acld and landanum, of each $10 \%$; quinine 40 grs ; brandy 40 ozs . Take 1 teaspoon, 9, 6, and 3 hours before the chill, until broken ; then at 17, 14, and 21 days after, take 3 doses, and no relapse will be likely to occur.

I am well satisficd that any preparation of opium, as lau. danwm, morphine, \&o., which affect the nerves, are valuable in ague medicine, from its intimate connection with, if not entirely confined to, the nervous system; hence the advantage of the first Ague pill, the opium being in the Dover's powider.

I have given this large number of preparations, and follow with one or two more, from the fact that almost every physician will have a peculiar prescription of his own, and are generally free to contribute their mite for the benofit of the worid; and as I have seen about as much of it as most book-makers, I have come in for a large share. The naturo of the articles recommended are such also as to justify their insertion in this work.
9. Febrifuge Wing.-Quinine 25 grs ; water 1 pt. ; sulphurio acid 15 drops ; epsom salts 2 ozs. ; brandy 1 gill ; loaf sugar 2 ozs.; color with tincture of red sanders. Dosm-A wine glaes 3 timeis per day.
This is highly recommended by a regular praotising physician, in one of the ague holes (Saginaw) of the west. It, of course, can be taken without any previous preparation of the system.
10. Tomo Wine Thoturns.- A positive cure for Ague without quinine. Peruvian bark 2 ozs.; wild cherry tree bark 1 oz ; olnnamon 1 dr ; capsicum 1 teaspoon; sulphus 1 oz . ; port wine 2 qts. Let stand a week, shaking occasionally. All the articies are to be pulverized. Dose-A wine glass every © or 3 hours through the day until broken, then 2 or 3 times per day until all in used.
Always buy your Peruvian bark, and pulverize it yourself, as most of the pulverized artiole is generally adulterated, This is the reason why more oures are not performed by it.
11. Sour Compere-Has cured many cases of ague, after "everything else" had failod j it is made as follows:

## Soot.

1 tablespoon, steepes lu water 1 pt and ates not up in a little water, as for or 1 ., and seltied with 1 egg beaten times daily with th, as or other coffee, with sugar and cream; 3都
It has come in very muoh to aid restoration in Tvohoid Fever, bad cases of Juundice, Dyspepsia, \&c., \&c.

Many persons will slick up their noses at these - Old Grandmother prescriptions," but I tell many " upstart Physicians," that our grandmothers are carrying more information out of the world by their deaths than will ever be possessed oy this class of "sniffers," and I really thank God, so do thousands of chers, that He has enabled me, in this work to redeem such an amount of it for the benefit of the world.
12. Balmony $\frac{1}{8}$ of a pirt basin of loose leaves, fill wiih boiling water and steep; drink the whole in the course of the day, and repeat 3 or 4 days, or until well.

It has oured many cases of Ague. It is valuable in Jaundice and all diseases of the Liver; and also for worms, by the mouth and by injection. It is also valuable in Dyspepsia, Inflammatory and Fébrile diseases generally.

NIGHT SWEATS-To Relieve.-After Agues, Fcrers, \&c.; and in Consumption, many persons are troubled with "Night Sweats;" they' are caused by weašncss or general debility. For its relief:

Take Ess. of Tansy $\frac{1}{2}$ oz. ; alcohol $\frac{1}{}$ oz. ; water +oz ; quinine 15 grs. ; muriate acid 30 drops; mix, Dose,-One teasponn in a gill

It should be taken swo or three times during the day, and at bed time; and the cold sage tea should be used freely as a drink, also, until cured. It will even cure Ague, also, bs repeating the above dose every hour, beginning iwelve te fifteen hours beforo the chill.

## FFVERS-General Improved Treatment for Bilious, Typhoid, and Scarlet levers, Congestivf

 Cimlls, do. Also, Valuable in Diarriea, Summer Complaint, Cholera Infantum, and all Forms of Fever in Chimdren.-The symptoms of Fever are generally wnderatood, yet $r$ will give the characteristio features by Fhich it will always be detected: cold chills, followed by
## MEDIOAL DEPARTMENT.

a hot skin; a quickened pulse, with a weak and languid feeling of distress; also, loss of appctite, thirst, restlessness, scanty exoretions; in fact, overy function of the body is more or less deranged. Of course, then, that which will restore all the differeut machinery to healihy acticn, rill restore health. That is what the following febrifuge has: done in hundreds of cases-so attested to by "Old Dector Cone," from whose work on "Fevers and Febrile Diseases," I first obtained the cutlines of the treatment, and it giver me pleasure to ackncwledge my indebtedness to him through fourteen yoars of ncighborhood acquaintance, always ninding him as willing to communizate, as qualified to practice; and daring, in breaking away from "Medical Society Ruies," tr accomplish good.

Viermifoge for frikes in Genkral-Carbonato of amiennis ${ }_{2}^{2 d r a}$; alum 1 dr. ; capsicum, foreign gentian, colombo root and Prussiate of iron, all pulverized, of each 1 dr. ; mix. by putting into a bottle, adding cold water 4 ozs . Doski-O no teaspoon to a grown person, every two hours, in commen ctases of fever. It may and keep the bottle tightly corked.
The philosophy of this treatment is, the carbonate of ammonia neutralizes the aeidity of the stomach, and determines to, and relazes the surface; and with the capsioum is a hundred per cent. more efficient. The alum constringes, soothes, and aids in relieving the irr tated and engorged mucous membrane of the stomach, and finally operates as a gentlo layative. The colombo and geatian aro gentiy astringent and etimulating, but chiefly toine, and the Prussiate of iron is tonic: and in their combination are, (as experience will and has proved) the most efficient and safe Febrifuge, iv all forms and grades of fover, yet known. We tierefore wish to state that, after twenty-five years' experience in the treatment of disease, we have not been able to obtain a knowledge of any course of treatment that will begin to compare with that given above, for the certain, speedy and effectual cure of all forms of fover; and all that is req.ins, is, to Lhave suffioient confidence in the course of treatmont fecommended; to use it from three to five, and in extreme cases, seven days, as directed, and that confidence will be inspired in all who use it, whether Physician (if unprojudised). ut
patient, or the heads of families; remember all processes in nature require time for their accomplishment.

After the patient has been twenty-four hours without fever, or if the patient be pale, blanched, with a cool aurface and feeble pulse, at the commencement of fever, prepare the following:
2. Febrifuge Tra.-Take Virginia snake root and valerian root, of each 2 drs . boiling water 1 pt. Pour the boiling water on the roots and steep half an hour, and givo a teaspoon of the Febrifuge and a tablespoon of this Tea together, every 2 hours, and after he has been another 24 hours without fever, give it every three or four hours, until the patient has good appetite and digestion, then three times daily, just before meals, until the patient has gained considerable strength, when it may be entirely discontinued; or he may continue the simple infusion to ald digestion.

A strong tea of wild cherry bark makes the best substitute for the snake root tea, and especially if mercury has been previously used in the caso, and if it has, it is best to continue the cherry bark tea until the patient is entirely recovered.
A patient using this treatment, if bilious, may vomit bile a few times, or if there is congestion of the stomach, he will probably vomit occasionally for a few hours, but it will soon subside. It will not purge, except a patient be very bilious, in which case there will probably be two or theee bilions discharges; but it gives so much tone to the action of the stomach and bowels as to secure regular operations; but if the bowels should not be moved in two or three days, give injections of warm water, or warm water with a little salt in it.

Give the patient all the plain, wholesome diet, of any kind, he will take; especially broiled ham, mush and rich milk, boiled rice, milk or dry toast, hot mealy potatoes, boiled or roasted, with good fresh butter, \&cc., \&o. ; and good pure cold water, or tea and coffee, seasoned to the taste, as drinks, and keep the person and bed clean, and roum quiet and undisturbed by conversation, or any other noise, and see that it is well ventilated.

If there should be extreme pain in the hoad when the foror is at the highust, or in the back or loins, and delirium af-night, with intolerance of light and noise ; in such oases.
in addition to keeping the room cool, dark and quiet, and giving the fel..-rifge regularly, as above dirocted, take the following:
3. Fever Liniment.-Sulphuric ethar and aqua ammonia, of each 1 oz . $\mathrm{m}_{\text {muriate }}$ of ammonia $\frac{1}{8} \mathrm{oz}$; mix and ahake the bottie, and wet the scalp c.id all painful parts, every 2 or 3 hours, untii the
After the applicatiou of the liniment, fold a muslin cloth four or five thisknesses, dip it in cold water, and apply it to the head or any part afflicted with severe pain; or to the pit of the stomach, if there be much vomiting; and it may be renewed every threc or four hours.
Besides the above trestment, dip a towel in cold water, and rub the patient off briskly and thoroughly, and be careful to wipe perfectly dry, with a clean, hot and dry tormel ; this may be repeated every three or four hours, if the skin be very hot and dry; but if the suriace bo pale, cool, moist, livid, or lead-colored, omit the general sponging; but the face, neek and hands may je washod occasionally, but he sure to wipe perfectly dry with a olean, hot and dry towel. But if he be very pale and blanched, with a cool or cold. surface, or have a white circle around his mouth and nose, or be covered with a cold olammy perspiration, give the Ifebrifuge every hour, until the above symptoms disappear, giving the patient het coffee or tea, penryyroyal, sage, balm, or mint tea, as hot as he oan sup them, and as freely as possible, and make hot applioatious to his person, and put a boitle of hot water to the soles of his feet; and after this teudency to prostration is overcome, then give the Febrifuge noee in two hours as before only.

Cbildren will use the wedicine in all respects as directed for grown persons, giving to a obild ono year old a furth of a teaspoon, or fifteen drops; if under a year old, a littlo less, (we have frequently arrested Cholora Infantum with the Febrifuge, in children under siz months old, and in with the slances under a month old,) and inerease the dose in pre intion to the age above a year o!d, giving the dose in propora child from three to six, and thiving half a teaspoon to foum six to ten years old, and three-fourtian of i teaspoon children some food several tind so on; and be sure to offor broiled smoked ham; good times a day, tho bost of which is broiled smoked ham; good stale wheat bread boilod in good

## DR. OHASE'S RECIPES.

rich milk, mush and milk, boiled rice, ets. ; but animal dici agrees best, and especially in eases of Summer Complaint, or Cholera Infantum, the diet had better bo almost exelusively animal. It will be dificult to use the infusion of anake root with children that are too geung to oboy tho uasidate of parents, and the Febrifuge may be made aweet, with white or loaf sagar, for young children, so as to cover its taste as wurhes possible, but older ehildren will be benelitted vary much by the use of the infusion of snake root and ralenian, and shovid take it as prescribed for astlts, of cowrse adapting the lose to the age of the patient.
4. Ninn,-The niove treatuent, if persevered in for a short tipe, is effectual in hreesting Diarrhea, Summer Complaint, Cholers Infuntum, and isll forms of Fever in children. Give it every two hours, or if the pationt be very feeble and corpse-like, giva it evory hour uatil there is reaction, and then give it every two hours, 83 prescribed for fever in general, and you will be satisfied with the result after a siort time.
5. Typrioid Fever.-If the patient bo Typhoid, that is, if his tongue be brown or blaek, and dry in the centre, with glossy red edges; if ho have Diarrhen, with thin watery, or muddy stools, and a tumid or swollen belly, he will probably inve a rapid, or frequent, and small pulse, and be delinious and rest but little at night; under these circumstances, give Fubrifuge in the tea, No. 2, as for fevers in general, every two hours, and give, also, the following:
9. Febrifoge Baisam.-Gum camphor 30 grs; balsam copalba, sweet spirits of nitre, compound spirits of lavender, of each $\frac{1}{3} \mathrm{oz}$.

Shake the vial, and give forty drops every four hours, in with the other medieine, until the tongue becomes moist ${ }_{n}$ and the Diarrhea pretty well subsided, when you will dis. sontinue this preparation, and continue the Febrifuge and snake root tea, as directed for fever in general.
Nute. - We do not believe that one case of iever in a thous? will develop Typhold ser toms, unless such cases har iured in the treatment of of orst stage, by a reducing medicine, as bleeding, vot 3 , especially emetic tartar, aspecially with calomei, and compound extract of corvert,
 der, whith is composed of saltpetre or nitre, and tartar uncid
stomach and bowels, aud consequently produce determination of blood to these parts, that results in irritation, engorgement, coagestion, inflamation, and consequently, Typhoid Feyer.

If fover is attended with Dysentery, or Bloody Flux, it should be tr"ated in the same manner precisely as Typhoid Fover, as it is nothing but Typhoid Fever with inflammation of the large, and sometimes small bowels. The treatment given for Typhoid Fever above, will cure all forms of Dysontery as it does fever, but the bloody and slimy discharges will continue for two or three days after the fever is subdued, and tho appetite and digestion are restored, and at. green, thore will be a good deal of pain at stool, whioh, howover, will soon subside.
7. Soarlet Fever.-If you have Scarlet Fever, treat it in all respects as fever in general, and if the patient's throat should show any indications of swelling, apply tho Fever Linimont No. 3, and make the application of cold water in the same manner as there directed; and it had better be repeated every three or four hours until the swelling is entirely subduod, when the wet cloth should be substituted by a warm, dry flannel one; but if the patient's throat should ulcorate, give a few drops of the Febrifuge every half hour, or hour, until the dark sloughs separate, and the throat looks red and olean, when you need only give the medicine at regular intervals, as recommended for fever in general, that is, every two hours. If this treatment be pursued at the onset, the throat will seldom, if ever ulcerate.
8. Conarstiva on Sinkina Chill.-In Casa of Congestion or Sinking Ohill, give the Febrifuge as directed for fever in general ; but if the patient be insensible and cold, or drenched in a cold perspiration, give the Febrifuge in a tablespoon of the snake root and valgrian tea every hour until the pationt becomes warm, and then give it every two hours to within twelve hours of the time he anticipates another shill, when you will give the following: capsloum 30 grs. ; puiverized carbonite of ammonia 90 grs.; and give a teaupoon bottle, and add 15 teaspoons of cold water, and give a teappoon, togethar with a teaspoon of the Febrifuge,
every hour, either alone, or what is better in a teaspoon of the snake root and valerian tea, tor 15 hours.

The patient should lie in bed and drink freely of pennyroyal tea, or hot coffee, or some other hot tea, and after tho time has elapsed for the ohill, give the same as for fever in general, until the patient is entirely recopered. The above treatment will arrest any form of ague, and the after treatment will, with any degree of care, prevent its return. Or the Ague may be arrested most speediiy, by taking one grain of quinine in a teaspoon of the Febrifuge every hour for six hours preceding a paroxysm, and then pursue the above tonic course.

I have given the foregoing treatment for fevers because I know that it is applioable in all cases, and that the articles are kept by all druggists. But there is a better, because quicker method of cure, and I am very sorry to say that for want of knowledge in regard to the value of the medicine, it is not usually kept by druggists. I mean the Tincture of Gelseminum. It is an unrivalled Febrifuge. It relazes the system without permanent prostration of strength. Its and inability to whion will gradually pass off in a distressed prostration; patient refreshed, and if combined few hours, leaving the restored. To administer it: ${ }^{\text {and }}$ with quinine, completely 10. Take the tincture of gelse and add 5 teaspoons of water ; gelseminuma 50 drops, put into a vial, Dosk-One teaspoon in half a glass of 10 grs. Shake when used. every two hours.

Watch carefully its action, and as soon as you discover its specific action as mentioned above, give no more.

Dr. Hale, of this city, one of the more liberal class of physioians (and I nse the term liberal as synonymous with the term suocessful), prefers to add twenty-five drops of the tincture of veratrum viride with the gelseminum, and give as there directed. And in case that their full specifio action should be brought on, give a few spoons of brandy, to raise the patient from his stupor, or what is preferable:
11. Carbonate of ammonia $\frac{1}{20} ;$ water 4 azs.; mix. Doss-1 table-wputir every 15 or twenty minutes, until revived. - If Dr. Hale's addition should be used, it will be found
applicable in all cases of fever, except in Typhoid accoripanied with its own excessive prostration; without the addition of the veratrum it is applicable in all oases of fevers above described. Of course, in all oases where the fever is thus subdued, you will continue quinine, or some other appropriate tonio treatment, to perfect a cure, and prevent a relapse. And it might not be amiss here to give a plan of preparing: a nourishing and agreeable lemonade for the sick, and espopially for persons afflicted with fever:

Lemonade, Nourishing, for Fever Pitients.-Artow-root 2 ee 8 teaspoons, rubbed up with a little cold water, in a bowl or pltcher, Which will hold about 1 qt . ; then squeeze in the juice of half of a good sized lemon, with 2 or 3 tablespoons of white gugar, and pour on boiling water to fill the dish, constantly stirring whilst

Oover the dish, and when cold, it may be freely draek to allay thirst, as also to nourish the weak, but some will pro-
fer the following:
13. Prof. Hofliand's Drine for Fever Patients or Excessifin Turrsir.-Cream of tartar $\frac{1}{2}$. oz . ; water 3 qts. ; boil untill dissolved after taking it from the fire add a sliced orange with from $1 \frac{1}{4}$ to 3 and keep cool.

To be used for a common drink in fevers of all grades, and at any time when a large amount of drink is craved by the invalid. Neither is there any bad taste to it for those in health.

UTERINe hemorrhages.-Prof. Platy's Tramimant Twenty Years Withoot a Famure.-Sugar of lead 10 grs ; ergot 10 grs. ; opium $3 \mathrm{grs}$. ; epicao 1 gr .; all pulverized and well mixed. Dose. 10 to 12 grs. ; given in a little honey or syrup.
In very bad cases after child-birth, it might be repeated in thirty minutes, or the dose increased to fifteen or eighteen grains; but in cases of rather profuse wasting, repeat it once at the end of thee cours, will usually be found ali that is necessary, if $n$ speat occasionally as the urgency of the case may be seen to require.

Prof. Platt is conlected with Antioch College, 0., and has been a very successful practitioner.'

## DYSPEPSIA.-In the good old days of corn hread and

## 88

orust eoffoe, there was but little troublo with Dyspepsia ; but since the days of fashionable intemperance, both in eating and drinking, suci as spirituous liquors, wincs, becrs, alo, toa and coffeo, hot bread or biscuit, high rwinced fond, overloading the stomach at meals, ani constant eating and swallowing it without properly chewing, excessive venery, want of out-door exercise, with great anxiety of mind as to how the means can be made to continue the same indulgen. bring oa or cause Dyspopsia.

And it would seem to the Author that the simple statement of its cause, the truth of which no one can reasonably doubt-would be sufficient to, at least, suggest its cure. But I am willing to state that, as a general thing, this overindulgenoo would not be continued, ner would it have been allowed had they known its awful consequences. I know that this was true in my own case, in all its points; this was, popro of the human system or the or knew but little of the it was for the purpose of finding practice of medicine, and that I eommenced its study; for it ming to cure myself indulgence at table, and betw; for it was by years of overness which I was carrying meen meais, in the grocery busicondition of the stomach than, that I brought on such a tolerable suffering-a for that eating gave me the most infirst a feeling of gonene heat, lassitude, and finally paint of support at the stomach, would have been a great riis, until a thousand deaths more I drank the more intoles drink was oraved, and the cider, vinegar and water, madolerable the suffering-apple It might be asked at this point palatable with sugar, excepted: ask, what could I dol Eat, I cort did $T$ do $f$ I would not; then what else was to be doi, not; drink, I could either. What, starve? No. doin onl to do without Treatmens.-Taka-no medicine wo the dogs"-yo, just stop taking. "Throw all No, jut simply get hungry; and food also. What, starve? being hungry? at least those who eat thre of a dyspeptio They eat because the victuals taste eat three meals a day. only. oause I was eating time, and supposed I must eat or dic, when I only died forty deaths by eating.

All physicians whose books I have read, and all whose prescriptions I have obtained, say: "Eat little and often; drink little and often." I say cat a little, and at the right time, that is, when hungry at the stomach; drink a little, and at the right time, that is, after digestion, and it is of just as much importance to eat and drank tho right thing, as at the right time.

Persons have been so low in Dyspepsia, that even one teaspoon of food on the stomach would not rest; in such cases, let nothing be taken by mouth for several days; but inject gruel, rice water, rice broths, \&c.; but these cases oceur very seldom.

I: RST.-Then, with ordinary cases, if there is much heat of the stomach, at bed time, wet a towel in cold water; wring. © it out that it may not drip, and lay it over the stomach, having a picce of flannel over it to prevent wetting the clotl" .. This will soon allay the heat, but kcep it on during ts ight and at any subsequent time, as may bo needed.

Second. - In the morning, if you have been in the habit of eating about two large potatoes, two picces of steak, two slices of bread, or from four to six hot pancakes, or two to four hot biscuits, and drinking one to three cups of hot tea or coffee-hold, hold, you cry; no let me go on. I have many times seen all these caten, with buttcr, honey or molasses, too large in amount to be mentioned, with a taste of every other thing on the table, such as cucumbers, tomatoes, \&a., \&ee., and all by dyspeptics; but,

You will stop this morning on half of one potato, tivo inohes square of steak, and half of one slice of cold, wheat bread-or I prefer, if it will agree with you, that you use the "Yankee Brown Bread," only the same quantity ; eat very slow, chew perfectly fine, and swallow it without water, tea, or coffee; neither must you drink any, not a drop, until one hour before meal time again, then as little as possible; 50 as yon think not quite tó cinoke to death.
Third.-The question now to bo settled is, did yon suffer from the abundance of your breakfast, or from tho kind of

## DR. OHABE'S REOPPES.

food taken? If you did, take less next time, or change the lind, and so continue to lessen the quantity, or change tho lind until you ascertain the proper quantity and kind, which enables you to overoome this quaeeding suffering after meals ; nay, more, whioh leaves you perfcetly comfortable after meals.

Lastlix-You now have the whole seoret of curing the worst case of dyspepsia in the world. You will, however, bear in mind that years have been spent in indulgence; do months, possibexpect to cure it in days, nay, it will tako and eare; and even whole year of self-denial, watchfulness, at a Christmas pudding will one overloading of the stomach Make up your mind to eat set you back again for months. small quantities, notwithstanly simple food, and that, in otber friend, will say, now dow an over-anxious wife, or puidding or other dish, no do try a little of this nice piu, now do have a cup of this matter what it may be. Ohl but no, no must be the invariob coffec, they will often ask: a "goner." For there is hardly answer, or you aro again to rolapse as dyspepsia; and indly any disease equally liablo or over-eating any one kind, or even in a varicty of food, fruit, will be almost certain to even watery vegetables or for the whistle. Then you must eat only suoh food as you know to agree with you, and in just as small quantities as will keep you in health. Drink no fluids until digestion is over, or about four hours after eating, until the stomach has become a "位le strong, or toned up to bear it, then one cup of tho "Dyspepsia Coffee," or une cup of the "Coffee Mado from over-drinking, than over-eating diffioulty is experienced Dyspeptics avoid cold water witing. Most positively must and gastric juice are diluter with their meals. If the saliva they never have the same with an abundance of any fluid, digestion, whioh they same propertics to aid, or carry on hope of the Dyspeptic is before dilution; then the only until digestion has had her perfeet work. witl his food, nor Caution.- I may be allowred to give a mord of caution to mothers, as well es to oll otheris One plate of food is enough for health-two, and even three are of Most persons have heard of the lady w, are often eaten. "cart load," but when she got to eatitho did not want a and the retort, "Back up your to eating, it all disappeared, was just what I would have expeoted to will load it again," been given to a Dyspeptio, whioh it no hear if the load had learn the proper amount of food nece doubt was; then when that is eaten, by yourself ner chessary for health, and is on the table and you choose to child, stop. If pudding right-have some pudding; if have a little of it, it is all cake, have a piece of cake; bue, have a pieee of pic ; or after you have eaten twiee as but do not havo all, and that requires. If apples, melons, raisin meat victuals as health and you wish some of them, eat the or nuts are on the table, after it ; if surprise is manifested before meal, and never to live, not live to eat. Thested around you, say you cul will eat all they need, and reason for this is, that persous cat nuts, raisins, melons often moro, of common food, then filled beyond comfort but ec., until the stomach is not only capacity of endurance; betually distended to its utmost the reverse course was takeng led on by the taste, when if when a proper amount of the the stomach becomos ratisfied eaten, after the others.

Are you a Grocer, and constantly nibbling at raisins, candy, cheese, apples, and every other edible? Stop, until just before meal, then eat what you like, go to your menl, and return, not touching again until meal-time, and you ure safe; continue the nibbling, and you do it at the sacrifice of future health. Have you ehildren or other young persons under your care? See that they only eat a reasonable quantity at meals, and not anything between them ; do this, and I am willing to be called a fool by the younyer ones, whioh I am sure to be; but do it r.ot, ard the fool will suffer for his folly.

You may consider me a hard Dootor-be it so then; the drunkard calls him hard names who says give up your "cups;" but as sure as he would die a drunkard, so your will you die a dyspeptic unless you die a drunkard, so sure and over-írinioing of water toss goupe up your voer-eating Now you know the water, tea, coffec, wine, beer, ale, \&o.

2. Garole for Sore Throat.-Very strong aage toa $\frac{1}{2}$ pt. 3 strained honey, common salt, and strong vinegar, of each 2 table spoons; cayenne, the pulverized, one rounding teaspoon ; stesping the cayenne with the sage, strain, mix and bottle for use, gargling from 4 to a dozen times daily according to the severlty of the

This is one of the very best gargles in use. By persevering some ti:ree months, I cured a case of two years standing where the mouths of the Eustachian tubes constantly discharged matter at their openings through the tonsils into the patient's mouth, he having previously been quite deaf, the whole throat being also diseased. I used the preparation for "Deafness" also as mentioned under that head.

Femembering always to breathe through nature's channel for the.breuth, the nose.

Besides the faregoing, you will wash the whole surface twice a week with plenty of the "Toilet Soap," in water, wiping dry, then with a coarse dry towel rub the whole surfrue for ten minutes at least, and aceomplish the coarse towel pari of is every night and morning until the skin will remain throughts the day with its flushed surface, and genial heat; this draws taie blood from the throat and other internal organs, or in other words equalizes the circulation; know, and act, upon this fact, and no inflammation can long exist, no matter where it is located. Blood accumulates in the part inflamod, but let it flow evenly through the whole system, and of course there can be no inflammation.
'You will also apply to the throat and breast the follow. ing:
3. Sore Trroar Lindmenr.-Gum Campher 2 oz; castile soap, shaved fins, 1 dr . ; oll of tarpenting 1 tablespuon; ofl of
 days it will be fit for use, then buthe the parts freely 2 or 3 timen
dully.

This liniment will be found useful in almost any threat or other disease where an outward application might be needed. If the foregoing treatment should fail, there is no alternative

## 94

but to bring in ometias with the other treatment, and continne them for a long time.

I mention the emetio plan last, from the fact that so many people atterly object to the emetic treatment. But when everything else fails, that steps in and saves the patient, which goes to show how unjust the prejudice. By the phrase, a long time, I mean several weeks, twice deily at first, then once a day, and finally thrice to twice a week, \&o. A part of this course you will see, by the following, is corroborated by the celebrated Lung and Throat Doctor, S. S. Fitch, of New York, who says "it is a skin disease, and that purifying medicines are necessary to oleanse the bloodtaking long, full breaths," \&c. This is certainly good sense. His treatment of throat diseascs is summed up in the following

Norx.-"Wear but littie clothing around the neck-chew often a little not-gall and swallow the juice-wear a wet cloth about all over as in consumption, and especiall over it-bathe freely cold water every morning, also wash oully bathe the throat with with cold water-avoid crowded rooms out the inslde of the throat solution of nitrate of silver-chewing - gargle with a very weak the juice and saliva from it-borrax gold thread and swallowing gum arabic water, if much irritation and honey occasionally, and possible until well, also often using a liniment exterce as little as
I had hoped for externally, but time has shen benefit from using oroton oil from it is not sufficient to remunat the advantage derived cation caused by its continued application.
4. Smoking dried mullein leaves in a pipe not having been used for tobaceo, is said to have cured many cases of Laryngitis. And I find in my last Eelectic Medical Journal so strong a corroboration, taken from the Medical and Surgical Reporter, of this fact, that I cannot refrain from giving the quotation. It says: "in that form of disease in which there is dryness of the trachea, with a constant desire to clear the throat, attended with little expeoinration, and considerabie pain in the part affected, the mullein smoked
which gathers in the larynx, and at the same time, by some unknown power, completely changes the nature of the disease, and, if persevered in, will produce a radical cure."

We read in a certain place of a gentleman who was walking around and through a great city, and he came across an inseription "To the unknown God"-and directly we find him explaining that unknown being to the astonished inhabitants. And I always feel, like this old-fashioned gentleman, to ory ont, apon every convenient occasion, my belief, that it was that God's great wisdom, seeing what was required, and His exceeding goodness, providing according to our neeessities, this wonderful, and to some, that unlenown power in the thcusands of plants around us. What matters it to us how it is done" ff the cure is performed, it is sufficient.

Since the publicatio or the foregoing, in the ninth edition, I have been smoking the dried mallein, and recommending it to others. It has given general satisfaction for coughs, and as a substitute for tobacco in smoking, exhilarating the aerves, and allaying the hacking coughs from recent colds, by breathing the smoke into the langs. In one instanee, after retiring, I could not rest from an irritation in the upper portion of the lungs and throat, frequently hacking withont relief only for a moment; I arose, filled my pipe with mullein, returning to bed I smoked the pipefnl, drawing it into the lungs, and did not oough again during the night.

An old gentleman, an inveterate smoker, from my suggestion, began to mix the mullein with his tobaceo, one-fourth at first, for a while; then half, and finally threo-fourths; at this point he rested. It satisfied in place of the full amount of inbaceo, and oured a cough which had been left upon him after inflammation of the lungs. The flavor oan hardly be distinguished from the flavor of tobacoo smoke, in rooms.

It can be gathered any time during the season, the centre stem romoved, earefully dried, and rubbed fine, when it is ready for use. It gives a pipe the phthysio, as fast as it
 uscā, can be roadily oleansed by burring out.

Here is the "Substitute for Tobaoco" for which the French have offored 60,000 franaw.

## DR. OHASE'S RECIEESS.

It can be unade into cigars by using a tobacco-leaf wrapper. Catarrh is often more or less connected with that disease. In such cises, in connection with the above treatment, take several times daily of the following:
 pulverized, 1 rounding teaspoon; mix, and bottle, corking
The snuff has a tendency to aid in the secretion from the parts; and the chloride correets unpleasant fetor.

Cancers.-To Cure-Method of fetor. (Surgeon-General of the Neapolitan Arandolfi,
severai. Successpul Amerioan Methods and sevrral Successiful Amerioan Methods.-The principle upon which the treatment is based, consists in trausforming a tumor of a malignant character, by conferring upon it a character of benignity, which admits of cure. This transfonmation is effected by cauterization with an agent looked upon as a specific, viz. : chioride of bromine, combined or

8. A gentlexan in Ohio cures them by making a tea of the yellow dook root, and drinking of it freely, washing the sore with the same several times daily for several days, then poulticing with tho root, mashed and applied twiee daily, oven on the tongue.
7. Rev. C. C. Ouyler, of Poughkeepsie, N. Y., says ho has known severnl casos cured as foliows:
Take the marrow-leaved dock-root and boil it in soft water until very strong, wash the ulcer with this strong decotion 3 times in the 24 hours, all the cavity also with the same 2 minutes, each time, then bruize the root, and lay it on guaze, and lay the ganze next to the ulser, and wet linen cloths in the decoction, and lay avor the poultice; and each time let the patient drink a win'-glass of the atrong tea of the same root, with $\frac{2}{f}$ of a glass of pori wine aweetened with honey.
8. Dr. Buchan's work on Medicine, gives the case of a porgon who had cancer of the tonguc, cured in fourteen days, an followis:

Dilute nilric acid 1 oz ; honey 2 ozs. ; pure water 2 pts. ; mix. Dosk.-Three tablespoons frequently; to be sucked past the teeth, through a quill or tube.

Opium was given at night, simply to keep down pain.
Great Enalish Remedy-by which a brother of Lowell Mason was sured, is as follows:
Take chloride of yinc, blood-root pulverized, and flour, equal quantios of each, worked into a paste, and appliel until the mass comen out, then poultice and treat as a simple sore.
The Rural New Yorker, in reporting this case, says, in applying it, "First spread a aomuron sticking plaster, much larger than the cancer, cutting a circular piece from 1le center of it a little larger than the cancer, applying it, whilh exposer a narrow rim of healthy akin; then apply the cancer plaster and ksep it on twenty-four hous. On removing it, the cancer will be foun? to be burned into, and appears the color of an old shoe-sole, and the rim outside will рppear white and par-boiled, as if hurned by steam.
"Dress with slippery cims poultice until suppuration takes place, then heal with any onnmon salve."

> io. Armenlan Mertod.-In Aruenla, a salve, made by boiling ollve ol tn \& proyer consigtence for the use, is reported by an eastern traveler to have cured vary bad caser,

## no

11, Figs boiled in new milk until tender, then upllt and applled hot--changing twice daily, washing the parts every change, with. some of the milk-drinking 1 gill of the milk also as often.

And continuing from three to four months, is also re. ported to have oured a man ninety-nino years old by using only six pounds, whilst ten pounds oured a easo of ten years' standing. Tho first application giving pain, but afterwards relief, every application.
12. Red OAK Bark.-A salve from the ashes, has long been credited for curing cancer, and as I havo recently secen the method given for preparing and using it, by Isaac Dillon, of Oregon, published in a paper near him, I cannot keep the benefit of it from the public. The dircctions were sent to him by his father, John Dillon, sen., of Zanesville, O., and, from my knowledge of the Dillon family, I have the utmost confidence in the prescription. It is as follows :
Take red oak bark ashes one peck ; put on to them, boiling water 6 qts ; let it stand 12 hours; then draw off the ley and boil to 14 thick salve ; spread this, pretty thick, upon a thick cloth a littie larger than the cancer, and let it remain on 3 hours; If it is two screre, half of that time ; the same day, or the next, apply agala 3 hours, which will generally effect a cure; after the last plaster, Wash the sore with warm milk and water; then apply a heallog salve made of mutton tallow, bark of elder, with a little rosin and bees wax (some root of white lily may bo added), stewed over a slow lird; when the sore begins to matterate, wash it 3 or 4 times dally, renewing the salve each timo ; avold strong dlet, and strong drink, but drink a tea of sassafras root and spice wood tops, for a week before and after the plaster.
13, Prof. R. S. Newtun, of Cinclnanti, uses the chloride of eine, a saturated solution (as strong as can be made), or makes the chloride iuto a paste, with thick gum solution.

In cases of large tumors he often removes the bulk of them with a knife, then applies the solution, or paste, as he thiuks best to destroy any remaining roots which have been severed by the knife.
14. Prof. Calusns, of Philadelphia, prefers a paste made from yellow-doek. red clover, and poke, usiug the leaves only of either article, in equal quantities.

Boiling, straining and simmering to a paste, applyine frem time to timin, to cancerous growths or tumors, until this entire mass is destroyed, then poultice and heal as usual.

> enc

But Dr. Beach, of N. . $\therefore$, who is a man of much experience in cancers, says beware of the knife, or any plaster which destroys the cancer or tuinor; but first use diseutients, (medisines which have a tendency to drive away swellings,) unless already ulcerated, then, mild poaltices to keep ap a disobarge from the ulcer, with alteratives, long continued, keeping the bowels regular, \&c., \&ce. The Vienna physicians, as well as Dr. Beach, allow the inhalation of a fow drops of chloroform where the pain is excrueiating. ALd I would say, apply a little cxternally, also, around the sore.

Cancers should not be disturbed as long as they do not grow nor uleerate, but as soon as either begins, then is the time to begin with thom.

COSTIVENESS-To CURe.-Costive habits are often brought on by neglecting to go to stool at the usial time, for most persons have a regular daily passarge, and the most usual time is at rising in the morning, or immediately after breakfast; but hurry, or negligence, for the want of an understanding of the evil arising from putting it off, these calls of nature are suppressed; but let it be understood, nature, like a good workman or student, has a time for each duty; then not only let her work at her own time, but if tardy go at this time, and not only aid but solicit her eall, or in other words:

Whon nature calls at either door, do not attempt to burr her;
Bat haveceavay, night or day, or heallh is sure to guffer.
The
and if not dyspeptic, uacoon to dict, using milk, roasted apples, time, "Yankee Brown brood"" apples, pears, peaches, \&o., at me ? If preferred, and avoiding, or bread made of unbolted whemt, romedy the difficulty. However:
2. In very Obstinate Caseg-Take extract of henbans $\frac{1}{d} d x$. ; extract of colocynth $\frac{1}{d r}$ dr. ; extract of nax vomica 3 grs. ; carefull $;$ Work into pill mass, and form into 15 pille. Done-Cize pll uibitit \#\#a miximg.

Continue their use until the diffioulty is overse at the sme time, following the previous direotions, fail. it fy:

## DR．OHASE＇S REOIPES．

With many persons the following will be found all sufficient：
3．Brandy－1 pt．；and put into it rhubarb－root，brulsed， 1 dr ．； hiera－plora 1 oz ． ；and fennel seed $\frac{1}{2} \mathrm{oz}$ ．

After it has stood for several days，take a table－spoon of it throe times daily，before eating，until it oporates，then half the quantity，or a little less，just sufficient to establish a daily action of the bowels until all is taken．Or，the seoond pill under the head of Eolectio Liver Pill may bo taken as an alterative to bring about the action of the liver， which is，of courso，more or less inactiva in most cases of long continued oostiveness．
4．Corn Meal－ 1 tablespoon stirred up in oufficient cold water to drink well，and drank in the morning immediately after risling， has，with perseverance，cured many bad cases．

5．A Freser Eag－Bcat in a gill of water and drank on rising in the morning，and at each meal，for a week to ten days，has cural whintinate cases．It might be increased to two or threo 效品教me as the stomach will bear．
＂OHRONTC（ it all the tadion thit which it will dissolve，and bathe the parts affected with a dry the foot，\＆c．，by the fire．Repeat this operation four times in the 24 hours， 15 minutes each time，for four days；then twice a day for the same period ；then onee，and follow this rule whenever the symptoms show themselves at any future time．＂

The philosophy of the above formula is as follows：Ohronio gout proceeds from the obstruction of the frec circulation of the blood（in the parts affeoted）by the deposit of a chalky substance，which is generally understood to be a carbonate and phosphate of lime．Vinegar and salt dissolve these； and the old chronie compound is broken up．The carbonate of lime，\＆c．，become acetate and muriate，and these being soluble，aro brokon up by the circulating system，and dia charged by seoretion．This fact will be seen by the gouty joints becoming less and less in bulk until they assume thein natural size．During this process，the stomach and bowels should be occasionally regulated by a gentle purgative．Aba stinence from spirituous libations；exercise in the opon air ${ }_{n}$ and especially in the morning；freely bathing the whola surfuce；eating only the plainest food，and onouryins finc time by study，or useful employment，are very desirable．ars pintanta

M. Husson, a French officer, introduced this remedy gout some sixty years ago, and it became so celebrated thet it sold as high as from one to tyo orowns a dose. It is considered valuable also in acute rhcumatism. In gout it removes the paroxysms, allays pain, and procures rest and sleep, reduces the pulse and abates fever.
3. Coffec has recently been recommended, not only for gout, but gravel also. . Dr. Mosley observes, in his "Treatise on Coffee," that the great use of the article in France is supposed to have abated the prevalence of the gravel. In the French colonies, where conice is more used than in the English, as well as in Turkey, where it is the principal beverage, not only the gravel but the gout is scarcely known. Dr. Faur relates, as an extraordinary instance of the offect of coffee on gout, the case of Dr. Deveran, who was attacked with gout at the age of twenty-five, and had it severely till he was upwards of fifty, with chalk stoncs in the joints of his hands and feet; but for four years preceding the timo when the account of his case had been given to Dr. Faur to lay "before the public, he had, by advice. used coffee, and had no return of the gout afterward.

PARALYSIS_IF Recent-To OURin-When paralysis, (numb palsy) has existed for a great length of time, but little benefit can be expected from any treatment; but if recent, very much good, if not a perfect cure will be the result of faithfully governing yourself by the following direc. tions with this:

Paralific Liniment.-Sulphurio ether 6 ozs.; alcohol 2 ozs.; laudanum 1 oz .; oil of lavender 1 oz .; mix and cork tightly. In a recent case of paralysis let the whole extent of the numb surfuce The thoroughly bathed and rubbed with this preparation, for several minntes, using the hand, at least three times daily, at the same time take internally, 20 drops of the same, in a little sweetened water, to prevent translation npon some internal organ.

It may be used in old cases, and, in many of them, will undoubtedly do much good; but I do not like to promise What there is no reaspasble chance to perform. It is woll

in rery recont oasess to koep the parts covered with flanuols, with a large amount of friotion by the hand; also, olectricity scientifically appliod, that is by a physician, or some one who has studied the nature and operation of the eleotrical machine.
This liaiment should be applied so freely that about an ounce a day will bo consumod on an arm or leg, and if a whole side is palsied, proportionally more. In cases of pains in the stomaoh or side a teaspoon will be taken with unusual suocess; or for pain in the head, apply to the sur-
with flannols, 80, electricity or some one the eleotrical

3weating process for about an hour, by which time relief will have been obtained; but when food has been .taken which romains in tho stonnech; it is much the best way to take an emetio, and the following is the
2. Ees.kerio Everte.-Whict is composed of lobelia, and ipecasuanhit. equal parts, and blood root hatf as much as of either of thenenters, each pulverized se paratcly, and mix thoroughly. Doss:Haif a comuinon teaspoon every 15 or 20 minntes in soine of the warm lets, for instunce, cumonile dowers, pennyroyal, or boneset; trinking firedy between doses of the sume lea in which yout take it: continue until you get $n$ free and fill evacuation of the contente
of the stomach.

After the operation, and when the stomach becomes a little setiled, some nourishment will be desired, when any of the mild broths, or gruel, should be taken, in small quantities, without fear of increasing the difficulty.
"There is, probably, no emetio surpassing this, either in efficacy of action, or efficiency in breaking up morbid, unheallhy oonditions of the system generally; and exciting healthy aetion. It is excellent in eroup, chronic affections of tho liver or stomach, \&e., and in fact when and where ever in emetie is needed."-Bcach.

But alter a full trial of both, upon my own person and others, I prefer lobelia seed alone, pulverized when used. The manner of administering them has been the cause of bringing the lobelia emetio into disrepute. I take "Thompson's Composition" tea, made as there directed and drink two saucers of it, fifteen minutes apart, and with the third I stir in one rounding teaspoon of lobelia seed, pulverized, and drink it ; then every fifteen minutes $I$ take anoiher suucer of the tea until free vomiting takes place, not taking any more of the lobelia ; by this course I think it more efficient and thorough than the mixed emetio, and entirely free from danger of the "alarming symptoms," as they are called, brought on by continuing to give the lobelia every few minutes instead of waiting its action, and all for want of knowledge as to what that action should be ; but if you give it its own timo, continuing the stimulating tea, it will have its specific action, which is to vomit, no matter at which end it is introduced. When it begins to vomit it will generally continue its action until it empties the stomach, then I begin to substitute the composition with :

## 100

## OR. OEASE'S REOIPES.

8. Bread Tea, Used in Takina Emetics.-Made by taking a piece of dry bread and crumbing it into a bowl, with a iittle salt, pepper and butter, to suit the taste, then pouring boiling water upon it ; this soon allays the retching, and strengthens the stomach to renewed healthy action.

Periodical Headache.-There are those who have sick headache coming on at periods of from a few weeks to two or three months, lasting two or three days, accompanied with nausea, and occasionally with vomiting. In these cases, aftor using the enetic to relieve the present attack, take the Oathartic Syrup next following:
4. Cathartic Syrup.-Best senna leaf 1 oz. ; jalap $\frac{1}{2}$ oz. ; butternut, the inner bark of the root, dried and bruised, 2 ozs. ; peppermint leaf, $\frac{1}{2} \mathrm{oz}$. $;$ fennel seed $\frac{1}{2}$ oz. $;$ alcohol $\frac{1}{2} \mathrm{pt}_{\mathrm{c}} ;$; water $1 \frac{1}{2}$ pts. $;$ sugar 2 libs. ; put all into the spirit and water, except the sugar, and let it stand 2 weeks, theu strain, pressing out from the dregs, adding the sugar and simmering a pew minutes only, to form the syrup. If it should cause griping in any case, increase the fennel sced and peppermint leaf. Dose-one table-spoon, nnce a day, or less often if the bowels become too loose, up to the next period When the headache might have been expected, and it will not be lorthooming.

This is a mild purgative, and especially pleasant. Most porsons, after a trial of it, will adopt it for their general cathartic, and especially for children. Increase or lessen the dose, according to the effect desired.

Frmales in a weak and debilitated condition, often have a headache which is purely sympathetic; this they will distinguish by their general weakness, irregularities, and lightheadedness, often amounting to real pain; in such cases take the following:
6. Ireadacre wrops.-Castor, gentian, and valerian roots, bruised, $\frac{+\mathrm{oz} .}{}$; laudanum 1 oz ; sulphuric ether $1 \frac{1}{2} \mathrm{oz}$. ; alcohol $\frac{1}{2}$ pt.; water $\frac{1}{2}$ pt. ; put all into a bottle and let stand about 10 daya. Doss.-A teaspeon as often as required, or 2 or 3 times sally.
6. Tinoture of Broon Root.-Made by putting 1 oz . of the dried, bruised root, to 1 pt . of gin, qud taking 1 teaspoon before cating, every morning, and only a reasonable amount of easily dirgented food.

Has worked wonders in cases where headaches had been of very long standing. And it might not be amiss to say that the majority of headaches are found amongst those who are disposed to Dyspepsia, by long continued over-eating, then redncing the gastric juice by over-drinking, even of water, tea or coffee. $\qquad$ A'Niles paper gives follows:
7. "Cuarcoal, a Core for Sict Headache.-It is stated that two teaspoons of finely powdered charcoal, drank in halt a tum. bler of water, will, in less than 15 minutes, give relief to the sich headache, when caused, as in most cases it is, by superahundance of acid on the stomach. We have tried this remedy thene and
again, and its factory."

When lieadache has been bronght on by eating too freely of boiled beef, cabbage, \&c., or any other indigestible dinner, one cup of "good tea," at tea time, eating only a slice of dry bread, will often allay the nervousness, quiet the head, and aid in gotting to sleep. The "Cood Samaritan" applied to the head is also good.
delirium tremens.-To Obtain Sleer.-Give an emetio of ipecacuanha, theu give 15 to 18 grs. of the same, cerery 2 hours, nsing the shower bath, and giving all the beef tea the patient
The jail physician of Chicago reports thirty-six favorable cases treated as above. In Boston, at the "House of Correction," the danger arising from the sudden loss of their accustomed stimulus, according to Puritanic economy, is overcome by administering frecly, a strong decoction of wormwood.
2. Stimulating Anodyne.-Suipuate of quinine 12 grs.; sulphate of morphine 1 gr.; mix, and divide into 6 powners. Dose-One powder every hour.
Prof. King, of Cincinnati, 0 ., says that from two to four powders of the above anodyne, will nearly eyery time produce sleep in this whisky delirium.
tYpilus fever.-To Prevent Infection.-Take nitre, (balt petre,) pulverized, $\frac{8}{4}$ oz. ; oil of vitrol $\frac{4}{4}$ oz. ; put the nitre into a teacup and set it on a red hot shovel, adding the vitriol onesixth at a time, stirring it with a pipe stem ; avolding the fumes as they rise from tie cup; no danger, lowever, in breathing the
The above amount is sufficient for a room twelve by sixteen feet, and less or more according to the sizo of other. rooms. Dr. J. C. Smith, of London, is said to have re:
ceived from Parliament $£ 5000$ for making this recipe publie.
2. To purify the air from noxious effluvia in sick rooms, not of contagious character, simply slice three or four onions, place them on a plate upon the floor, changing them three or four times in the twenty-four hours.
3. Disinfectant for Rooms, Meat, and Fisn--Common-salt I a teacup; sulphuric acid 2 or 3 ozs.; put about $\frac{1}{2}$ oz. of the acid upon the salt at a time, every 15 minutes, stirring until all put on:

Which will purify a large room ; and for meat or fish, hang them up in a box having a cover to it, and thus confine the gas, and tainted articles of food will soon be purified, by the same operation. And notwithstanding so much was paid for the "Smith Disinfectant," the above will be foand equally good.
4. Cofree, dried and pulverized, then a little of it spriukled upon a hot shovel, will, in a very fow minutes, elcar a room of all impure eflluvia, and especially of an animai character.
5. Culoride of Lime.-Half a saucer of it, moistened with an equal mixture of good vinegar and water, a few drops at a time only, will purify a sick room in a few minutes.
SWEATING PREPARATIONS.-Sweating Drops.-Ipecacranha, saffron, Virginia suake roct, and camphor gum, each 2 ozs. ; opium $\frac{1}{2}$ oz. ; alcohol 2 qts. Let stand 2 weeks, shaking occasionully. Dose-A teaspoon in a cup of hot pennyroyal, spearmint, or catnip tea, every half hour, until perspiration is induced ; then once an hour, for a few hours.

It is excellent in colds, fevers, pleurisy, inflammation of; the lungs, \&c. It is good to soak the feet in hot water at ${ }^{\prime}$ the same time.
2. Sweatina wite Burntia alcohol.-Pour alcohol into a saucer, to about half fill it; place this under a chair ; strip the person to be sweated, of all clothing, and place him in the chair, putting a comforter over him, also ; now light a match and throw into the saucer of alcohol, which sets it on fire, and by the time the alcohol is burned out he will be in a protuse perspiration, it not, put in half as much thoro of alcohol and fire it uguin, which will accomplish the ohject ; then rise up and draw the comforter around you, and get into bed, following up with hot teas and uweating drops, us in the frat abore.

This last plan of sweating is also good in recent colds, plcurisy, inflammation of the lungs, and all other inflam. matory diseases, either in reeent attacks, or of long standing complaints. See the closing remarks ofter the treatment of "Plearisy," also " Ginger Wine."
imperial drop,-For Gratel and nidnet Complatits.Take saltpetre 1 oz ; ; putting it into an iron moritar, dropping in a live coal with it, which sets it on fire ; stir it around until it all melts down into the solid form, blow out the coals and pulverize it; then take an eqnal amount of bl-carbonate of potassia, or saieratus, and dissolve both in soft water 2 ozs. Dose-from 20 to 30 drops, morning and evening. in a swallow of tea made from flax seed, or a solution of gum arablc.

In connection with the drops, let the patient take from a table-spoon to two or three table-spoons of onion juicethat is, all the stomach will bear-eating all the raw onions he can, and continue it until free of the complaint. I have seen gravel the size of a common quill, crooked, and one and one-fourth inches in length, which a lady passed from the bladder, and smaller bits almost innumerable, by the simple use of onion juice alone.

The onion juice, (red onions are said to be the best,) has and may. be injected through a catheter, into tho bladder; have no fears to do this, for I know a physician, of forty, years' practive who has done it five times with success-a physician, however, would have to be called to introdnce the catheter.
2. In what is termed "Fits of the Gravel," that is, whero small gravel has beoome packed in tho ureter, (tube which leads from the kidney to the bladder,) causing excruciating pain in that region, a pill of opium must be given, varying in size from one to three grains, acrording to the pain, strength, and age of the patient.
3. A strong decoction made by using a largo handful of smart weed, adding a gill of gin, and a gill each of tierso mint and onion juices, and taking all in 12 hours, has been known to discharge gravel in! gro quantities.-P'hilude'? ?hia Eclectic Journal.
The surest sign of gravel is the dark appearance of the arine; as if mixed with coffee grounds, and a dull pain in the region of the kidney-if only inflammation, the darkness will not appear. See the closing remarks upon Gout. CAMPHOR ICE,-FOR CAUPPED ELADS of Lurg-Spermacetio.

## DE. OHASE'S REOTPRs.

tallow $1 子$ oz. ; oil of sweet almonds 4 teaspoons ; gum camphor oz. ; made fine. Set on the stove until dissolved, constantly sulfring. Do not use only just sufficient heat to meit them.
Whilst warm, pour into moulds if desired to sell, then paper and put up in tin foil. If for your own use, put up in a tight box. Apply to the ohaps or oracks two or three times daily, especially at bed time.
burns.-Salife for Burns, Frost-Bites, Cracted Nipples, \&o. -Equal parts of turpentine, sweet oil, and beeswax ; melt the oil and wax together, and when a littlo cool, add the turpentine, and stir untll cold, which keeps them evenly mixed.

Apply by spreading apon thin cloths-linen is the best. I used thís salve upon one of my own ehildren, only a year and a half old, which had pulled a cup of hot coffee upon itself, beginning on the eyelid, and extending down the face, neck and breast, also over the shoulder, and in two places across the arm, the skin coming off with the clothes; in fifteen minutes from the application of the salve, the child was asleep, and it never oried again from the burn, and not a particle of scar left.
It is good for chaps on hands or lips, or for any other soro. If put on burns before blistering has taken place, they will not blister. And if applied to sore or oracked nipples every time after the child nurses, it soon cures them also. For nipples, simply rubbing it on is sufficient. I find it valuable also for pimples, and common healing purposes; and I almost regret to add any other preparations for the same purposes, for fear that some one will neglect this; but as there may be cases where some of the following ean be made when the above cannot, I give a few others known to be valuable. The first one is from Dr. Downer, of Dixboro, within six miles of our city; he used it in a cass where a boy fell backwards into a tub of hot water, scalding the whole buttock, thighs, and privates, making a bad scald in a bad place, but he succeeded in bringing him successfully through, and from it containing opium, it might be preferable to the first in deep and very extensive burns, but in that case the opium might be added to the first. It is as follows:
2. Do Domarr's Salive for buins.-Beeswax 4 ozs. ; opium © oz. ; sugar of lead 1 oz ; melt the beeswax, and sub the lead
ap in the wax, then the oplum, and finally add about a gill of sweet oil, or sufticient to make a salve of proper consistence.

Spread lightly on cloth-no pain, he says, will be felt under its use. He highly recommends it for the pain and inflammation of Piles, also.
3. Poulmon for Burns and Frozen Flest,-A Brouson, of Meadowville, Pa., sayp, from 15 years' experience, that Incian meal poultices covered with Young Hyson tea, moistened with hot water, and laid over burns or frozen parts, as hot as can be borne, will rellove the pain in 5 minutes, and that blisters, if they have not, Will not arise, and that one poultice is usaally suff cient.
4. Sayve for Borns.-Beeswax, Burgandy pitch, white pine pitch, and rosin, of each $\frac{1}{4} \mathrm{lb}$; mutton tallow $\frac{1}{2} \mathrm{lb}$. ; goose cil 1 gill ; tay $\frac{1}{2}$ gill, mixed and melted together, and used as other salves.

This was used successfully on a very bad case, burned all over the face, neck, breast, bowels, \&c., soothing and quieting pain, giving rest and sleep directly.

Garden and Kitcien Saleve for Burns and Frost Bites.Liveforever and sweet clover leaves, cammomile and sweet elder, the inner bark, a handful of each; simmer them in fresh butter and mutton tallow, of each +lb .; when crisped, strain out, and add. 2 or 3 ozs. of becswax to form a salve. Spread very thin on thin oloth.
Mrs. Miller, of Macon, Mich., cured a bad case with this, burned by the clothes taking fire, nearly destroying the whole surface. She spcaks of it in equal praise for cuts and frost bites. See the Green Ointment also for Chilblains.
6. The white of an egg beat up, then beat for a long time with a table-spoon of lard, until a little water separates from them, I have found good for burns.
7. The white oxide. of bismuth, rubbed up in a little hard, is also a good application in burns.
8. Glycerine and tannin, equal weights, rubbed together into on ointment, is very highly recommended for sore or cracked nipples. See Dr. Raymond's statement in connection with the treatment of Piles.
ITCHING FEET FROM FROST BITES.-To CURE-Take hydrochlorio acid 1 oz ; raia water 7 ozs ; ; wash the fect with it $\%$. erf times daily, or wet the socks with the preparation until res.
Liered.

## DR. ofinse's reoiptis

A gentloman whose feet had been frozen, in the Alps, eight years before, and ánother man's had been frozen two years before on the Sierra-Nevada mountains, were effectually cured by its use.
Chilblains.-To Core.-Publiseed by Order of the Go-
 melt in an iron vessel and add hydrated oxyde of iron 2 oz .; uniform biack color with an iron spoon, until the mass is of an oz.; and Armenian bole 1 et it cool and add Venice-turpentine 2 dole with a littie olive oil before putting it in. 1 dr ; rub up the Apply sorol 1
-heals the worst eases in a few days.
Chilblains arise from severe oold to the part, cansing troablesome, long continued sores.
FELONS.-If Recent, to Cori in Six Hours. - Venice turpentine 1 oz .; and put into it half a teaspoon of water, and stir with a rough stick until the mass looks like candied honey, then spread a good coat on a cloth and wrap around the fliger. If the case is 2. A pore pain in 6 hours. unless matter is ponltice on a felon cures by absorption, a head, and thus saves formed; if it is, it soon brings it to 3. Blue flas and pain and suffering. milk and water, then hellebore roots, equal parts, boiled in as hot. as can be borne and find in it for twenty minutes, one hour, has curerne, and bind the roots on the parts for
4. A poultin many felons, when commenced in time. kept wet with spirits of cam an old $\log$ house, made and 5. plag of tobacioninnt. - Take sweet oil inint, and stew a 3 cent out and add red lead 1 oz., tobacco is crisped ; then squeeze $\mathbf{i}$ cool, add palverized camphor gum boil until biack; when a little Mrs. Jordan, of and has cured many bae, 0 ., paid ten dollars for this recipe; it. Bad fellows bod felons, as well as bad fellows, with this is a rational use ouse they did not pay her. Certainly,
6. Felon Salve.-A salve made by burning one tablespoon of copperas, then pulperizing it and mixing with the
in twenty-four hours; then heal with oroam two parts, and soft soap one part. Apply the healing salve daily after soaking the part in warm water.
deafness.-If Regent, yo Cure, if not, to Relleve.-Hen'e oll 1 gill ; and a single handful of the sweet clover raised in gardens; stew it in the ofl until the juice is all out, strain it and

Where deafness is recent, it will be cured by patting three or four drops daily into the ear, but if of long standing, muoh relief will be obtained if continued a sufficient longth of time.
2. Mueh has been said in France about sulphuric ether, first tried by Madam Cleret, of Paris; and, although she lost her reason by the .elation of feeling brought on, no doubt, by the honor given her for the discovery, yet the continued trial of the article does not give the satisfaction which had been hoped for from its first success.
Warts and corns.-To Core in Trn Minutes.-Take a mmall piece of potash and let it stand in the open air until it slacks, then thicken it to a paste with pulverized gum arabic, which prevents it from spreading where it is not wanted.

Pare off the seeds of the wart or the dead skin of the corn, and apply the paste, and let it remain on ten minutes; wash off and soak the place in sharp vinegar or sweet oil, either of whieh will neutralize the alkali. Nosy io not jam nor squeeze out the wart or corn, like "stret-corner peddlers," but leave them alore and nature will remove them without danger of taling cold, as would be if a sore is meadr by piacning them out. Corns are caused by pressure; in most cases removing the pressure cures the corn. Nine of cvery ten corns can be cured by using twice, daily, upon it, jany good liniment, and wearing loose shoes or boots. See Good Samaritan.
2. Cure for Corns.-If a oripple will take a leminn, cut off a piece, then nick it so as to let in the toe with the corn, the pulp next the corn-tie this on at night, so that it cannot move-he will find next morning that, with a blunt knife, the corn will come away to a great extent Two or three applications of this will make a "poor oripple" happy Sor life.-London Hield.
3. Acetio Acid, touched to hard or soft corns, night and norning, for one week, will cure thom. So will the Samaritan liniment, whieh see.
4. Dr. Hariman's lanocent and Sure Ctre for Conns, Warts and Cimlilanss.-Nitrie and muriatic acids, blue vitriol' and salts of tartar, of each 1 oz . ; add the blue vitrol, pulverized, to elither of the acids, and in the saine way add tho salts of cartar; when for fore foaning add the other acia, and in a few days it will be fit fir use.

Dirfotions.- For frested feet, rub them with a swab or brush, wet with this solution very lightly, every part that is red and dry; in a day or two, if not cured, apply again as bofore. For corns, apply in like manner, scraping off tead skin lefore using. For warts wet onoe a week until they disappear, which will be soon, for it is a certain cure in all the above cases, and very cheap. So says the Doctor, of Anderson, Ind.
5. A' gentleman in Ohio offers to pay ten dollars a piece for all corns not cured in three days by binding a bit of cotton batting upon it, and wetting it three times a day with spirits of turpentine.
-6. I am assured by a gentleman of Syracuse, N.Y., that a plaster of the "Green Mountain Salve," put upon a corn, will completely cure it by the time it naturally comes off.
LINIMENTS-Good Samaritav-Iaproved.-Tike 98 por cent. alcohol 2 qts., and add to it the following articles : Oils of sassafras, hemlock, spirits of turpentine, tinctures of cayenne, catecha, guaicaci, (guac, a and landanum, of each 1 oz . ; tincture of mym, 4 ozs ; orl of origamum 2 ozs, $\frac{\text { ait }}{}$ of wintergreen $\frac{1}{2}$ oz.; gum camphor 2 ozs. ; and chloroform $1_{2}$ izs.
I have used the above liniment over five years, and cannot speak too highly of its valuc; I have cured myself of two severe attacks of rheumatism with it, the first in the knee and the last in the shoulder, three years after; my wife his cured two corrs on the toes with :t, by wetting them twice daily for a few days; and it is hard to think of anything which it has not cured, such as sprains, bruises, cuts, jams, rheumatism, weak back, reducing swellings, curing leg-athe in children from over-playing, for horseflesh, \&a, \&o. But you will allow me one remark about liniments-they ought in all uases to he put on and rubbed
ns, night and 1 the Samari-

98 per cent. ils of sassaae, catechu, re of mymh
oz. ; gum
, and canmyself of rst in the after ; my y wetting o think of s , bruises, swellings, for horseark about id rubbed
in from twenty to thirty minutos, and laying the hand on the part until it burns from its effeets, instead of ono or two minutes, as is the usual oustom; ;and if made by the quart, you onn use them frcely, as tho oost is not more than about one-eighth as much as to purchaso tho two shilling lovttles. Wetting flannel with the limiment, and binding on, is a goo! manner of application. Dr. Itule, of this city, has adopted this liniment for general use; but for headache and neuralgia, he takes eight ounces of it and adds an ounce of chloroform, and half an ounce of oil of vintergr sen, rubbing upon the head, holding to the nostrils, \&o. [he full pree esoription will usually cost nbout two dollars.
2. Linmëent for Old Sones.-- Mcohol 1 qt. ; aq.... ammonia 4 ozs. ; oil of origanum 2 ozs.; conmphor gum 2 ozs. ; oplum 2 ozs. ; gum myrrh 2 ozs.; common sult 2 tablo-spoons. Mix, and shake ; oumaally for a week.
This was.
wardsburgh, Mercis, good as it had done hoing it might do many others as much sears of an old sore on his leg neinhbors. He showed ne after years of suffering; and also oallea had oured with it, whose father he had cured of a similar sore a young man which had never broken out again: ho sore, y before, His leg became sore after a protracted fever. I have great confidence in it. He uses it also for cuts, bruises, horseflesh, inflammatory rheumatism, \&c., \&o.
3. Dr. Raymond's Linimeyt.-Alcohol 1 qt. ; oils of origanum 2 ozs.; and wormwood 1 oz . ; with comphor gum 2 ozs. ; spirits of turpentine 2 ous. ; and tincture of cantlitides 1 oz . Mixed and used as other liniments.

Dr. D. W. Raymond, of Conneaut, O., thinks that the last is' the best liniment in the world.
4. German Rheomatio Fleid.-Olls of hemlock ind cedar, of each $\frac{\lambda}{3}$ oz. ; oils of origanum and oassafras, each 1 oz ; aqua ammonia 1 oz ; capsicum, pulverized, 1 oz. ; splitts of tarpentine and ${ }_{95}$ gum camphor, each ent. alcoh. ; put all finto a quart botile, and fill with

The Germans speak equally in praiso of this fluid, as a liniment, as Dr. Raymond loes of his, besides they say it is very valuable for cholie in man or horso. Dose.- Foi colis for man, half a teaspoon; for a horso, one-half to one ouniin i little warm water, overy fifteon minutes, until relieved

A gentleman purchased a horse for seventy-five dollars, which had been strained in one of the fetlocks, worth before the strain one hundred and twenty-five dollars. He cured him with this liniment, and sold him for the original value. He cored his wife also of neuralgia, with the same, since I have published this recipe. Judge ye of its value.
5. Cook's Elecfro-Magnetric Lintment.-Best alcohol 1 gal. ; oil of amber 8 ozs .; gum camphor 8 ozs. ; castile soap, shaved fine. 2 ozs. ; beefs gall, 4 ozs. ; ammonia, 3 F's strong, 12 ozs. ; mix, and shake occasionally for 22 hours, and it is fit for use.

This will be found a strong and valuable liniment, and also cheap. It may be used in $\cdot$ swellings, strains, \&c., and rubbed ypon the throat, breast and lungs, in asthma, sore throat, de.

Liminent for Spinal Affections.- Take a pint bottle and put into it oil of origanum, wormwood, spirits of turpentine and mi- camphor, of each 1 oz . and fill it with best alcohol

Mr. Barr, a gentleman with whom IL ve been acquainted for some four years, has been houbled with spinal weakness and pains, and he ceres great relief from the use of this liniment; and b:-uaughter took it internallv for a cough,
also, wit
aqua ammania of Linon Linieent.-Take chloroforth, olive oil, and zse as other liniments. Very valuable. of morphia, 10 isrs. Mix and
8. Gem Linment-Take gum opium, of each $\ddagger$ oz. ; cayenne pepper $\frac{1}{2}$ oz. ; alcohol in, and gum This liniment is ready for use in three or four days, mix. is very hishly recommended by $\mathbf{E}$. Burrows of Mays, and Laperer Co. Mich. Ie prefers rum if ass, of Matamora, be, $n$ in place of the prefers rum, if a good article can col © cr.diarrhea also.
4. Patent Linment.-In order that those who purchase the patent liniments may know what they are buying: I give a formula, from which over twenty thousand dollars worth of liniment was sold in two years' time, but one of the partners going out of the firm and into the livery busivess, gave me the plan as follows:
Take whisky 1.5 gals, ond put ints it 2 ibs. of capsicum, pulPrized, let siand 10 days and percolate, or draw off the whisky, Tno of the sediment ; in the meantime take 1 gal. of spirits of tur,
five dollars, worth before

and gum pt. ; mix. lays, and atamora, ticle can ellent in

## cadiqal Departmiant.

pentrit, and put into it oils of origanum, horse-mint, sassafras, and hemlock, 6 ozs. each ; add gum camphor 2 lbs. Mix and it is ready be honest because they are themselves so.
But that no loss may arise from the space this liniment recipe ocoupies here, I will tell you how to make a good liniment, by using a part of that with the following:
Take of the patent liniment 8 ozs . ; sweet oil and oils origanum, sassafras aud aqua ammonia, of each 2 ozs, and $m$ origawill as used, and this mixture will make a splendid horse iniment, with which you can easily blister, by bandaging the part if desired, and wetting the bandage with it.
The first would cost less than $\$ 1$ per gallon, whiist the retail price, two shillings per bottle, makes it over \$2 per quart. See where your money goes.
10. Lobehi and Cateinna Lintaent.-Take a quart bottle and put into it + oz. of Cayenne, pulverized, then put in 2 ozs. of lobelia, herb, and fill up the bottle with whisky ; in two weeks it is and it will heal cork cuts in for cats, hruises, strains, sprains, \&c. stopping them from labor; and with but verg or horses, withous applying 2 or 3 times daily. I know a gentleman who had a gash cut in his scalp, four "inches in length, and to tho skull in depth, by a falling limb, which by the use of this liniment only, as strange as it may appear, it healed without pain or soreness. But some niay object to it as a whisky liniment. I admit it to be such, but by knowing how to make it yourselves, you get it for a Whisky price, and if it be not found as good as one-half of the two-shilling-a-bottle liniments, then you may tell me that I do not know when I have a good thing.
11. Lindent-Said to be St. Join's.-For 70 doz, bottles take spirlts of turpentine and seneca oils, of each 4 gals. ; linseed or laudan, 2 gals. ; oils of origanum, bemlock, juniper, amber, and arnica 2 gals. ; camph qts. ; spirits of ammonia $1 \mathrm{qt}$. ; tincture of well; when you wish to fill into Put all into a keg and shake and draw into a convenient bottle small bottles, shake, it well, shake it well every time youtle or pitcher to pour from; and bottle whenever you nse you fill five bottles; and shake the "Elating" Liniment. No metter whent ; thus it might be called good one.

I obtained the recipe of a young gentleman who worked in Mr. St. John's store over a year, yet much care was taken
ho purbuying: dollars one of ry busiof tur-

to prevent the knowledge of its exact composition, from being found out by ossistants ; it is a well known fact, however, that an observing mind can learn much, although not expressed in words. Perhnps he will blame me for publishing information gained in that way, but I obtain knowledge for the benefit of the people; and as I have called un the Doctor two different times to sell my work, but could not suoceed, I do not feel under any special obligations to him, and if I did, I go in for the greatest good to the greatest number. Were it not so, I should not publish much that is contained in this work, for there are many persons who have and are making furtunes out of single recipes, now published for the benofit of thie world.
Beeause I could not soll my Recipes to I. I.. St. John, a druggist, of Tifin, O., however, is not saying that I do not soll them to druggists generally, as I do. In Aurora, Ill., I sold to six, and in Pomeroy, 0 ., to seven, every one in either place, which is not common. They are, however, not only anxious to obtain information generally, but also willing obtained as roothers ; and how Mr. St. John should have without sometim reeipes as the ones here attributed to him, as a general rule, thosing bought, is a little surprising; for are not themselves the orive put out "Patent Medicines," Jayne is reported, I know the recipe in an out-how not how truly, to have picked up say, then, am I not justifiod in publishing these reeipes? Nay, morel am I not honorable in thus benefitecipes? people? 1 rest the matter with them, always willing the abide their decision. Persons only wishing to put uy, for their own use, will take one-seventioth of the various amounts, which will be about as follows:
Turpentine and Seneca olla, of each, $7 \frac{1}{8}$ ozs, ; sweet oil and tincture of arnica, of eaoh, 3 is ozs. ; oils of origanum, hemlook, juniper, amber, and laudaumi, of ench, $1 \frac{1}{\mathrm{~g}}$ ozs. ; spirits of ammonia $\frac{1}{2}$ oz, and gum camphor $\frac{1}{}$ ozn, which makes a litfle less than 1 qumount.
aling 64 qua., besddes the gum camphor, in the whole

This caloulation will bo fufiliontly near for all practical parposes.
I have sold the condition powdor and liniment, out of the

## DR. CHASE'S REOTPES.

more could be asked? Yet he is very careless, for I called on him on a cold, snowy day lately, and he was in the woods, for wood. $D_{0}$ I need better proof of its value? No one would expeet sickness of the stomach to arise from its use, usualiy makes of which it is composed, but the first dose somotimes vomits. but don't rather sick at the stomach, and rather trust to tailarack-bark for continue its use. I had consumptive syrups of the tea than thrce-Sourths of the aflicted with cough, be the day. Let every one who is as possible. Remember, with to avoid exposure as much is lifo, there is hope. But it would be deceptive and wicked to hold out to all consumptives the idea that they could be cured-facts speak like this, although I have never seen it in print, nor heard the remark, but my own observation says that nine out of every ten hereditary consumptives, will, in the end, die of' the discase, while an equal number of those whose disof acute inflammatio colds being neglected, or from neglect who know their pations, \&o., may be cured. Then those gone with this disease need hardly in their family to have standing much bencfit may hardly expect a cure, notwithabove treatment, good diet be derived from care, with the those whose systems are not and out-of door exercise, while peot a permanent cure. I shall now throw in a few thoughts of my own, and fro tho experience of many others in the profn, and from hope may benefit all, needing light on throfession, which I Srasr, then- $\mathrm{D}_{0}$, not go South, to the subject. go North, for cool, fresh air, hu, to smother and die; hut the roasted game; cast away, hunt, fish, and eat freely $\mathrm{o}_{2}$ Christ, that it may be well, livie, after having trusted all in faithful friend with you, to leing or dying. Take a healthy, ramblos. So shall it be well with when needed, in your wise sink to the consumptive's with many' who would otherwith you, and roast them in the ember Have your potatoes also, which you will mix with the embers; your corn meal in it, and bake on a board bof water, having a little salt cannot mako out a good flavoure the fire, and then say you aíió, from your rrost venison, or broileal, and a healthy ore
toes and johnny cake, I will then aeknowledge that you are indeed far gone on the consumptive's track, and espeeially if you have been wandering over hills and through the valleys of our northers country in pursuit of the game of which you are about to partake.

Secondly-Do not leave home after having tried everything else in vain, and just ready to wrap the mantle of the grave around you; then you need all the case of many friends, and a quiet place to die; but, strike out the first thing when you become certain that permanent disease has fastered upon the lungs; then you may not only reusonably expect a cure, but be almost certain. Have the means with you to avoid getting wet by rains; but often wash and rub the whole surface, wearing flannel next the skin, and clothe yourself according to the weather and sex; for there is no reason why females should not pursue about the same course.

They can dress a la Bloomer, and with their father, husband, brother or other known friend, derive the same benefit from out-door exercise, like field or forest rambles, botanical huntings, geological surveys, or whatever sports or realities may give just the amount of exercise not to fatigue the invalid.
For females' who have families and cannot leave them, gardening will be the best substitute for the travel, or of all the employment which can be engaged in.
Lastlu-Those who are already far down the consumptive track and confined at home, will derive muoh benefit by using, at each meal, half a pint of rich, fresh cream. In all ableness. And if it can be borne. a tea, to a teaspoon of the best brandy may be added. 1 Much is being said now-a-days, wout the necessity of constent inflation of the lungs by long drawn breaths, holding the breath, also, as long as possible, when thus fally inflated; but for those whose lungs are extensively diseased, it is not only useless but very dangerous, from the liability to burst blood-vessels in the lungs, causing hemorrhage, if not instant death. In the commencenent of the disease, however, or for those in health, the practice is decidedly good.
2. Half a pint of uew railk, with a wive-glass of exprossed

## DR. OHANE'S RECIPES,

juice of green hoarhound, each morning for a month, is said to have worked wonders in relieving the soreness of the lungs, and giring tone to the general health in this disease.
3. Chlorate of Potash, for Consumption.-A gen"tleman of Iowa read a paper about a year ago before the "American Medical Association," upon the subject of Chlorate of Potash in Consumption, giving the history of a few eases only. For the want of a more extended trial of it, the Association thought best not to publish his paper, but members for further test. Amongst those ment one of the Vice-Presidents is Dr. A. II. Palmer, of this city, sor of "Practice, Materia Me the Association, and Profesof Michigan, at Ann Arbor-by , soholar. Having had much by the way, a gentleman and a fit to give it a trial. He hos exience in practice, he saw and with a single exception with it in about thirty cases, that case there was at first much marked success; and in tient was a German who does not improvement, but the pavery well, and from this fact whet understand our language a heat or burning sensation in the he found that it caused to the Professor and have the the stomach instead of going doned it altogether. But thro quantity lessened, he abanI have been permitted to through Prof. Palmer's kindness marked amelioration has taker to other cases where a very ried lady, although her lungen place. One of these, a marmuch coughing, sorencss of the were full of tubercles, with full breaths being taken, \&e., findgs, with sharp pains upon all gone, and that full breaths her cough loose, soreness (or stitching, as commonly called) be taken rithout pain, she could have had this prescrip,) and fully believes that if she would now have been well, prescion earlier in the disease, its use. Another lady has been yet derives much relief from and finds that her symptons are using it only a few months, whe has gained seventeen pounds in very much reliaved, and The Professor assuen pounds in flesh. he presoribed the chlorate, that in the first few croos where was really astonishing; which, benefits were so marked, it on in its use, until, as before of course, caused him to go have bcen more or less benefitt remarked, about thirty eases ohlorate into a glass of water, which is to be drank a little at a time, in from siz to twenty-four hours, with other appropriate treátment.

If in any case the ohlorate should cause a heat or burning sensation at the stomach, lessen the quantity; and unless this does occur, no apprehensions need be felt in using it. It improves the general symptoms, lessening the pulse, \&o., whilst the Cod-Liver Oil has never done anything more than to benefit merely as food; and from its very disgusting smell and taste, and the almost impossibility of keeping it upon the stomach, I greatly prefer the fresh sweet cream mentioned above, or the fat meat, as mentioned below. Europe, where he traveled that in Paris and other parts of one well authenticated case during the past summer, that not duced. But he feels much of cure by them can be prochlorate will prove itself worthy encouraged to hope that the

The above was written why of great confidence. coming in since then, both in year ago; and the reports more than confirms the expected Ancria and from Europe, vantages from the use of the ched benefits and hoped for ad-
4. Remarks on the chorute in this disease. tive of Consualption.-There is fat Meats-prvenuse of fat meats, and especially is so much said against the that I cannot better olose my pork, as an article of diet, than by giving the opposite my remarks upon this subject corroborated also by my own experience. Dr. Dixon, of the Sealpel, some tie.
position that ." the use of oils would ago, assumed the tims of consumption nine-tenths, would diminish the viowhole secret of the use of Cenths, and that that was the of fat meats." Dr. Hooker's observations on the nre of fat meate, connected with consumption, are as foilows:
"Frrss-Of all personts between the ages of
more than one-ifith eat no fat meat age of 45, all, excepting less that. SEcond-of persons at the meat. Turrd-Of persons who than 1 in 60 , habitually use fet soold fat meat, a few acquire between the ages of 15 and 22. aguire an appetite for it, and live to :

## 124

## DR. CHASE'S RECIPES.

good old age, whilst the greater portion die with phthesis (conknmption) before 35. Fưrti-Of persons dying with phthesis between the ages of 12 and 45, nine-denths, at least, have never
used fat meats. used fat meats.
"Most individuals who avoid fat meat, also use little butter or oily gravies, though many compensate for this want in part, at least, by a free use of those artieles, and also milk, eggs, and various saceharine substances. But they constitute an imperfeet, substitute for fat meat, without which, sooner or later, the body is almost sure to show the effects of deficient calorification."

A lady-lecturer recently said in this eity, in one of her lectures-"Sct a piece of pork before a lady: oh, horrible I the dirty, nasty, filthy stuff; give us chicken-elean, niee chicken." Now this lady, certainly, was no farmer's wife, or she would have observed that the habits of chickens are ten times more filthy than that of the hog, if it be possible; for even the hog's leavings and droppings are carefully overhauled by them, and much of it appropriated to "ladies" meat." But their filthiness is no argument in either case; for nature's strainer (the stomach), throws off all impurities. Why do so many young ladies, young clergymen, and strdents die of consumption? Simply because chicken or other lean meats, hot biscuit, \&c., without exercise, make up the sums of their diet; when, if they would eat fat meats, with bread not less than one day old, serub floors, saw wood, or other arm exercise, according to sex, an hour at each end of each day, they might be spared for years-perhaps to long lives of usefulness, to their familtes, congregations, or the wirld. So far as pork is concerned as food, the following rule may be safely followed: If it agrees with the stomach, which is known by its digesting without "Risings," as it is oalled, its uso may be continued, but if. it rises, lessen the quantity, and if it still rises abandon its use altogether: but it digests better with me than mutton, or chicken, and I have been trying them for nearly fifty years. The same rule is good for all articles of food. As to excreise, for men who are not regular laborers, wood sawing is the best, next, horse-back riding, then walking; for women, hoeing in the garden or field, next sweeping, dusting, \&re, then horseback riding, walking, \&o.
6. But I have recently seen a piece going tho roands of the papers as the best cure for consumption in the world, which contains so much good sense that I will close my remarks. on the subject by giving itan quotatiou, and let every one judge for themselves, which to try, if they see fit to give either a trial. It is represented as coming from an exchange only, but from its style of remark, I think it must have started from Hall's Journal of Health:
"Eat all that the appetite requires of the most nourishing food, suoh as fresh beef. lamb, oysters, ruw eggs, fruit, vegetables, nnd three times a day take a glass of egg-nog, made as rich as the pationt can bear. Avoid all other alcololio dinks. Bathe twice a week in water made agreeably warm, and in a warm room; after bathing rub the body and limbs with sweet cream or stweet oil. Exercise daily in the open air ; walking is the best. Stand erect, exercise the arms and lungs freely, keep the mind cheerfal; take freely of the best cough syrup, and consumpticn will be a stranger to your household.
"For making the best cough syrup, take 1 oz . of thoroughwort ; 1 oz . of slippery elm ; 1 oz . of stick licorice, and 1 oz . of flax seed; simmer together in 1 qt. of water until the strength is entirely extracted. Straln carefully, add 1 pt. of best molasses, and $\frac{1}{2}$ lb. of loaf sugar ; simmer them all well together, and when cold bottle ingt. This is the cheapest, best, and safest medicino now or ever in use.".
"A few doses of one table-spoon at a time will alleviate the most distressing dough of the lungs, soothes and allays irritation, and if continued, subdues any tendency to consumption; breaks up entirely the whooping cough, and no better remedy can bo found for croup, astluma, bronchitis, and all affections of the lungs and throat. Thousands of precious lives may be saved every year by this cheap and simple remedy, as well as thousands of dollars which would otherwise be spent in the purchase of nostrums which are both useless and dangerous."-Exchange. For egg-nog see "Stimulant in Low Fevers."
OINTMENTS.-FOR OLD Sures.-Red precipitate $\frac{1}{2}$ oz. ; sugar of lead $\frac{1}{2}$ oz. ; burnt alum 1 oz ; white vitriol $\frac{1}{2}$ oz., or a little less; all to be very finely pulverized ; have mution tallow made warm $\}$ lb. ; stir all in, and stir until cool.

Mr. Brownell, of Dowagiac, Mich., thinks there is no ointment equal to this for fever or any other old sores, from aotual trial, as much so as Mr. Loomis does of his Liuiu:r No. 2.

## dr. Chase's reotpes.

2. Judirins' Ointment.-This Ointment has been long
celebrated through Ohio and the Eastern States. It was tget cold, and if not then sufficiently thick to out a litle, letting soft linen, as a salve, you will boii again until thispon thin, reached.

He says, and I have no doubt of it, that it is good for all kinds of wounds, bruises, sores, burns, white swellings, rheumatisms, ulcers, sore breasts, and even where there are wounds on the inside, it has been used with advantage, by applying plaster over the part.
campisson's OnNTMent.-Bert brandy $\frac{1}{2}$ pt.; turpentine 1 gill ; alcohol will keep nice for fothro use, ; (beat's gall bottled with

This ointment, or probablys,) neats-foot oil 1 pt. Mix.
las been long ttes. It was name, whose naturally as sons, who is lso obtained r, (see those heal cancers
n a kettle on have pulverugar of lead 1 in the pow,then stir in little, letting 1 upon thin, his point is swellings, there are antage, by

Sine 1 gill tlled with t. Mix. not equalrruises, or length of parts. llb. each; tir in $\frac{1}{\frac{1}{j}} \mathbf{~ o z}$.
irably, it ion, keepse, which nder the ngside of ing linen what is eut and the out-
side from healing until it healed from the buttorit, and thus saved the horse, which everybody said must die; and of course evorybody always knows. The man owning the horse Was thrown from his buggy whilst the horse was running, and had a leg broken; the horse was well before the man. Hiram Sisson, an old farrier and farmer, of Crown Point, Essex Co., N. Y., has used this and the one bearing his name, No. 3 , several years, and speaks of them in the highest terms. Mr. Wykoff, a few miles north of this city, han used this green ointment for several years, curing a deep eut in the thigh of a friend in a few days with it, which induced him to pay ten dollars to an Unglish lady for the recipe; since then he cured a bad case of chilblains with it, upon a German boy who had not woin boot or shoe for three yerrs on their account. I have now known it for two years, curing outs on horses' feet, from stepping over corn stubble in spring ploughing, by only a few applications. It is worth more than the cost of this book to any family who has not got it.

This mixed with equal parts of the Mugnetic, No. 11, and the world cannot beat it for general rise.
5. Green Onfmannt.-Honey and beeswax, of each $\frac{1}{j}$ lb. $;$ spirits of tarpentine 1 oz .; wintergreen oil and laudanum, each 2 ozs.; verdigris, finely pulverized, $\frac{1}{4}$ oz. ; lard $1 \frac{1}{2}$ liss. $;$ mix iy a stove fire, a copper kettle, heating slowly.

I have given this green ointment, varying somewhat from the first, obtained of a gentleman at Jamestown, N. Y., who was selling it in large quantities, as he uses the spirits of turpentine instead of the white pine, for that frequently is hard to get, and by some this will be preferred, for the flesli of a few persons will inflame under tho free use of verdigris, and it will be scen that this last recipe has not near as much of it in as tho first.
6. Dr. Kittredee's Celrbrated Onument.-Fon " PrmpleiFace," "Prairie Itcin," \& O-Toke a pint bottle and put into it nitrie acid 1 oz .; quicksilver 1 oz .; and let stand until the silver is cut; then me!t lard lib. in an earthen bowl and mix all Logether, anc stir with a wooden spat:la until cold.
Old Dr. Kittredge is an Allopathic Physician, but his ointment has been known over the whole State as death to the "Michigan or Prairie Itch," and the doctor recommends DR. CHASE'S REOIPREA.
it for Canceroits, Sorofulas, and Syphilitic Uloers, also Saltrheum, Ring-worms, "Pimpled Face," Chronic Inflammation of the cyelids, \&o. Applioation-For cutancous eraptions, seratch off the scab, warm the cerate, rub in thoroughly once a day; for running ulcers, spread a thin plaster, and not change oftener than once in thirty-six or-forty-cight
hourg.

## 7. Man's Slat-Rhievi Ointuenn--Aquafortis 1 oz. ; quicksilver 1 oz . ; yood hard soap dissolved so as to muafortis 1 oz; ; quicksilver

 putting the aquafortls and quicksilver, incorporate the above by When done effervescing, mir with the into an tarthen vessel, and the chaik in last, and add a little spirito of ingredients, putting table-spoon.Mr. Mead is ar ${ }^{11}$. ainety years, and resident of this eity, ad ranced in age, over

 oured, aracter vith it. d tho set.Let me here say that in any disense of long standing, nse some of the alterativa medieines to cleanse the blood, while using the outwaid npplisations. The "Cathartio Al. terative" is especially adapted to these skin diseasen, and should be continued some time, oven if you are not anzious to get married. The Citron Ointment is sept by ncarly all druggists.
9. White lead in awoet oil, used as an ointment, cured a lady in Lafayotte, Ind., of a bad case of Salt-Rhoum.
10. Ifmer Ontweat.- Unsalted butter 1 lb ; ; Burgundy pitch 2 ozz, spirits of turpentine 2 ozs. ; red precipitate, pulverized, 140z; melt the pitch and add the butter, atirrling well together; then romove from the fire, and when a littlo cool add the spirits of turpentine, and lastly the preclpitato, and stir until ooid.
This will cure all cases of psora, usually oalled "The Itch," and many other skin oruptions, as pimples, blotches, \&o.

Dr. Beach thinks the animal whioh infests the skin in real itch, is the result of the disease, whilst most autbore think it the cause.
11. Magnetio Ointient.-Satd to ae Trask's.-Lard, raisins, cut in pieces, and fine-cut tobacco, equal welghts; simmer well together, then strain and press out all from the dregs.

The above is an excellent ointment, and looke like its namesake, and its action is really magnetio. Mix this in equal parts with the first Green Uintment No. 4, and it will make a good application in Piles, Salt-Rheum, and all cutaneous or skin diseases, as we!! zs cuts, bruises, \&o. If used in Salt-Rheum, sone of tho alterative remedies nust be sken at the same time, and long continued.
12. Stramonidm Ointment.-The probability is, that for general use, no ointment will bo found superior to this, when properly made. It is kept by most druggistn, but it is not half as good generally as if made by the mllowing directions. I give large proportions, from the faet that it will be used in large quantitics. Stramonirm is known by the n:mes of "Jimpson," "Stink Woed." "Thorn Apple," \&e., from its thorny burr.

Pick about a bushel of the leaves, while jet green, having a suitable iron kettle placed over a alow fre; put in a fin of the leaves and mash them as you koop addling until you get them

## DR. CIIASE'S RECIPES.

all mashed into a puipy mass, then put in lard 5 los., and stew to a crisp ; then strain and box for use. Those who live in of the noft extract, make it with less tronble, will purchase 1 dr . water until it is of sept by druggists, rubbing it with a little into an olntment wich a cousistence as to allow it to be rubbed salo ointment, but not no 1 oz. This will be belter than the It is anodyne, (rolicred as the "Home Made," above. Wle ulcers, slïn diseases, painful in burns, sealds, old irritais discutient, (driving arraynd hemoritoids, (Piles,) and ing to broken limbs, $i$. e., after tings, ) and vory strengthenover the limb freely, and thoroug bones are heand to rul ing, and gives tone to the musoles ; it reduces the awellWe have recently the muscles, tendons, \&o. compound fracture fiown two cases of fracture, one a in persons well adyane ankle, the other of the wrist, both turned very siow, but with life; in both cases strength recation of this ointment ; and inble speed by the free appliprevented mortification and in tho first case it undoubtedly swelled rheumatism. It is valuable, also, in painful or. ble, in such cascs, is a tincture perhaps what would be preferathorny burr, two ounces, to made of the seeds from the half pint, if it is not found alcohol and water, of each, a Arnica," I will give you niy alead of the "Tincture of applying it, wet cloths or bry head for a "Foot-Ball." In parts, keepince thoths or brown paper, and bind upon the "Tinctures." rheumatism, oaked breasts, caked udders, \&e., \&e.
Good sized live toads, 4 in number, put into boiling water and cook very solt; then take them out and boil the water down to $\frac{1}{4}$ pint, and add frêsh churned, insalted butier 1 lb . and simmer together ; at the last add tineture of arnica 2 ozs.
This was obtained from an old Physician, who thought more of it than of any other prescription in his possession. Some persons might think it hard on toads, but you could not kill them quicker in any other way.
Jaundice.-Dl. Prabody's Cure,-In its Worst Foras.Red iodide of mercury $\overline{\mathrm{g}} \mathrm{grs}$; iodide of potassitm 9 grs. ; aqua dis. (tistilled water) 1 oz.; mix. Commence by giving 6 drops drops are times a day; increasing one drop a day until 12 or 15 drops, are given at a dose. Give in a littie water immediately.

taine of $p$ laid by a enabl
2. 1 15 gr and aj
after meals. If it causes a griping sensation in the hovels, and fullness in the bead when you get up to 12 or 15 drops, go back to 6 dropis, and up ayain as before.

In two very bad cases of jaundice, I have kncwn the above to bo eutirely successful.
I am aware that many persons will not use any preparation containing morcury in any of its forms, while there are many others who would uso them for that very reason; my object is to benefit all, without strengthening the prejic lices of any; for this reason I give you the following:
2. Drisk for Jausicice.-Tie up soot and saffron, equal parts, in a cloth to the size of half a hen's egg, let it lie in a plass of water over niglt ; in the morning put the yolls of all egg, beaten into this water, and drink it. Do this 3 mornings, skipping s, until 3 doses bave been taken.

I am assured that it has proved successful in mary bad cases. Sce also Soot Coffee, No. 12, amongst the Ague remedies.
-piles.-Successiful Renemies.-I Internal Rement.- Craam of tartar, jalap, pulverized, senna and flowers of sulphur 1 oz each ; purte of potash (saltpetre), $\frac{1}{2}$ oz. ; golden seal 1 oz., thoroughly every day arl together, in a niortar, and give a teaspoon threa times every day, or the dose may be varied to suit the condition of the patient, taking moro or loss to suit circumstances, keeping the
bowels in a solvent state.
External Aprlecition:-Inner bark of the white oak trea, boil and strain, and bot ayain until you obtain $\frac{1}{2}$ pint of the extract, very thick; then add \& pint of the oil of tho oldest and strongest bacon you can procyre; simmer together until a union takes place when cold. Then apply by the finger up the rectumd every lating diet. Tin. Se very strict to abstain from strong and estimuin all cases, sooner or later.

Dr. Harriman, of Andersontown, Ind., has been very successful with this plan of treating Piles; and since J obtained the plau, now two years, i inave nad one opportunity of proving its efficiency upon a gentleman who had heen. laid up for days, and soinetimes weeks, with the complaint; by a few applications of the external remedy he has been enabled to keep diroctly tlong with his labor.
2. Pur Cerate - Carbonate o lead $\frac{1}{2}$ oz.; sulphate of maryhine 15 grs ; strainmoniam ointment 1 oz . ; olive oil 20 drops. Mix, and apply three times a day, or as occasion and pain may require.

## 132

This cerate has been highly celebratea as a remedy in Piles. It will rehieve tho pain most ussuredly. Piles have been cured with lamp oil applied to the parts two or three times a day. Even tallow, or any simple ointment, is good for dry Piles, that is, for pain in those parts, coming on often in the dead of night, without apparent cause.
3. For Extarnal Piles.-The following is very highly spoken of: Take oyster shells, wash and burn them, then Ginely pulverize and rub up with fresh lard; anoint with this, and take internally sulphur one ounce, mixed with three ounces of pulverized rosin; take night and morning what will lay on a fivo cent piece. Take every day for the first week, then every three or four days, until well, continuing the ointment.
Mrs. Morearad, of Danville, Ind., cured herself of Piles by simply sitting in a hip-bath of, warm water, every timo the pains would come on, after stools or any other time, remaining in the bath until the pains left her. Her husband oured himself by sitting in cold water, and using upon the parts an ointment made by stewing celendine in fresh lard. I give thoso various plans, so that if one fails, a remedy may oertainly be found amongst the many given.
G. P. Roaers, of Irontown, O., has known cases cured by using the following ointment: Pow dered opiam and powdered rosin, one ounce each, mixed with one ounce of tallow; and anoint as required.
6. Dr. D. W. Raymond, of Conneaut, O., says : Equal weights of glyoerine and tannin will cure Piles, by anointing with it, and that very speedily ; also cures sore on cracked nipples in twenty-four hours, and is remarkably good for any excoriation, or sore, of the skin. I know that simple tallow introduced into tho rectum is exceedingly beneficial. in Piles, whioh satisfies mo that any preparation containing oil or any kind of grease, is good.
7. I have found in the serap of an old newspaper, the following, and it is so casily tried, and speaks with so much certainty, and is so simple, that I give it an insertion.

on of nulday until case may require. The above is a cheap, simple, and most infallible cure for that most painful and unpleasant disorder. It has been used with complete success in old and inveterate eases where individuals had spent scores of dollars in medical advice. It is equally used as a preventive. It will injure none, and unly requires a trial."
8. Paschal Mason, living near this city, curcd a Southern lady visiting in the neighborhood, who was coufined to the bed wita them, by making a strong tea of the wild swamp-currant root, drinking occasionally for a few days only.
9. Jimpson Iieaves and parsely, a handful of each, stewed in lard, one pound, and used as an ointment, has sured many cases.
ANODYNES-Hoffyan's Anodine, or Golden Tincture.Sulphuric ether 2 ozs. ; alciohol 4 ozs. ; and etherial oil 9 dr. ; mix. Dose-From half to two teaspoons ; ( $\frac{1}{2} \mathrm{dr}$. to 2 drs ) according to the urgency or pain for which it is given.

It is given in a little sweetened water, and much proferred by the Germans to laudanum, especially where laudanum causes sickness of the stomach. It makes an excellent looal application in neuralgia and other painful affections, being second cousin to the Magnetic Tooth Cordial and Paralytio Liniment.
2. Lavidanur.-Best Turkey opium ioz. ; slice and pour upon it boiling water 1 gill, and work it in a bowl or mortar until it if dissolved ; then pour it into the bottle, and with alcohol of 76 per cent. proof $\frac{1}{4}$ pt., rinse the dish, adding the alcohol to the preper ration, shaking well, and in 24 hours it will be ready for use. Dosk-From 10 to 30 drops for adulta, according to the strength of the patient, or severity of the pain.
F Thirty drops of this laudanum will be equal to one grain of opium, and this is a much better way to prepare it than putting the opium into alcohol, or any other spirits alone, for in that case much of the opium does not dissolve. See the remarks ocouring after Godfrey's Cordial.
3. Pareaonio.-Best opium $\frac{1}{2}$ dr., dissolve it in about 2 tablespoons of boiling water; then add benzolic aedi $\frac{1}{3}$ dr. ; oil of anise咅 a fiuid dr. ; clarified honey 1 oz ; camphor gum 1 scruple; alcohol, 76 per cent., 11 fluid ozs.; distilled water 41 fluid ozs.; macerate, (keep warm,) for 2 weeks. Doss-For children, 6 to 20 dropu ; adulta, 1 to 2 teaspoons

Used as an anodyne and antispasmodic, allays cough, re lieves nausea, and slight pain in the stomach and bowels, cheoks diarrhea and procures sleep. Used principally for children. See the remarks after No. 5, below.
4. Bateman's Pectoral Drops.-Opium in powder, catechu in powder, camphor gum, red saunders, rasped, of each $\frac{1}{3} \mathrm{oz}$; oil of anise 1 dr .; dilute alcohol [alcohol of 76 per cent., and water in equal proportions,] 1 gal. Keep warm for 2 weeks.

The opinm strongth of this is about equal to paregoric, and it is used for similar purposes, and doses. See the remarks below.
8. Godfrex's Cordral.-Dissolve pure carbonate of potassal 1 oz .; In water 5 qts., and add nice golden syrup or best molasses 3 qts.; and heat until they begin to simmer ; take of the scum, and add laudanum 9 ozs., and oil of sassafras 1 dr . Nix well. Use similar to the two last.

Remarks.-It is a well known fact that much injury is done to children by the use of anodynes, such as the above, and "Mrs. Winslow's soothing syrup," which is now taking the place, to a great extent, in towns, of the foregoing, for I noticed a short time ago eighty-seven empty bottles with Mrs. Winslow's label upon them, sitting on a counter of one of our drug stores, which led me to ask if they put up her syrup. The answer was nu, a lady in this city has fed that muok to one child within the past eighteen moaths.

The question might be asked, why do we tell people how to make any of these anodynes? Because they are good in proper cases, when properly used, and to give a place for these comarks; for those who are evil disposed will find a way to accomplish their designs, whilst the well disposed will, or oan, act only from knowledge, and if they do not know the evils arising from the constant use of anodynes on children, are as liable to do evil as the evil disposed.

Then let it be remembered that the constant use of opium in any of its preparations on children, or adults, disturbs the narvous system, and establishes a nervous necessity for its continuation. Then use them only in severe pain, or extreme norvousness, laying them by again as soon as possiblo under the oiroumstances of the case. Of course we do not give a rooipe for the Soothing Syrup spoken of, as its exact composition has not yet como out to the publio; but that its

soothing properties are owing to opium, there is not the least doubt.- See "Carminatives," which are preferable to opiates, especially for children.

RHEUMATISMS.-Inflammatory Rhedmatism-Bhl Wriaht's and other Cures.-Sulphur and saltpetre, of each 1 oz . ; gum guaiac 1-2 oz. ; colchicum root, or seed, and nutmegs, of each $t$ oz. ; all to be pulverized and mized with simple syrup of molasses 2 ozs. Dosk.-One teaspoon every 2 hours until it moves the bowels rather freely; then three or four times daily uutil cured.
Mr. Wright, of the Niagara Hotel, Toledo, 0., has several times proved this to be an excellent medicine, and since I obtaincd it I found a man at Marshall, Mich., one Saturday evening, with his feet and legs so swollen with this disease that he could but just crawl with two crutches. I filled this prescription and gave him a teaspoon of it every two hours until it moved his bowels, then every four hours, and on Monday ncon he could walk quite comfortably without cane or crutch, the medicine costing only twenty cents.
2. Rheumatio Alterative. - In Rheumatism of long standing the following preparation has often proved very valuable:

Colchicum seed, and black cohosh root, of each 1-2 oz., the root to be bruised ; best rye whisky 1 pt ; put together and let stand 3 or 4 days. Dose-From one teaspoon to a table spoon 3 times daily, before meals.

The action will be to loosen the bowels, or cause a little sickness at the stomach; and the dose may be modified not to canse too great an effect upon the patient cither way, but increasing the dose if necessary until one of these specific actions is felt, and lessening it if the action is too great in
any case.
3. Rheumatio Linimen.-Olive oil, spirís of camphor, and chloroform, of each 2 ozs. ; sassafras oil 1 teaspoon. First add the oll of sassafras to the olive oil, then the spirits of camphor, and shake well before putting in the chloroform, shaking when used, keeping it corked, as the chlozoform evaporates very fast if left open. Apply 3 or 4 times daily, rubbing it well, and always to-

I kad a brother-in-law cared of a verg bad ease of inflam. matory, or swelling rheumatism, by the use of this liniment -accomplished in about four deys, without other treatment.

He paid five dollars for the recipe after the sure But 1 would recommend the use of this in connection with "Bill Wright's Cure," nbove, feeling perfectly assured that no attack will stand before the internal and external combination.
4. J. B. Hrcencocx, Ypsilanti. Mich., uses spirits of turpentine 1 pt. ; tar 2 teaspoons; oil of vitriol 1 teaspoon, mixing in a mug; then sets them on fire, letting it burn 15 minutes, and bottle for use.

He bathes the parts freely twice daily with this preparation, then binds on the mashed tory weed, as mentioned under the head of "Reducing Swellings," and gives a little spirits of turpentine internally.
5. Alfai Raymond-Takes rum 1 pt. ; neats-foot oil $\frac{1}{2 p t}$, or if the joint is stiff, skunk's oil instead of the other; spirits of tarpentine 1 gill, and simmers them together, and bottle for use, :ubbing it in thoroughly 3 times times daily.

He also directs to soak the feet in hot water, scraping the bnttoms of the feet with an old knife; then he has poke root roasted and mashed, mixing with it tar and sulphur to form drafts for the feet. With this method of treatment he assures me he has been successful for 30 years. And it bears so strong a resemblance to Dr. Kittredge's preparation next following, for stiffened joints in rheumatism, that it gives me double confidence in them both.
6. Dr. Kittredae's Remedy for Raeumatism and Stiff Jonits. -Strong camphor spirits 1 pt. ; neats-foot, coon, bear, or skunk's oll 1 pt. spirits of turpentine pt. Shake the bottle when used, and apply 3 times daily, by pouring on a litllo at a time and rubbing in all you can for 20 to $3^{r}$ vinutes.

The old doctor recommends this as a sure cure for chronio rheumatisms, sprains, stiff joints where they have not formed an anchylosis, that is, if the bones lave not actually grown together; and as remarked in connection with his ointment, No. 6, he has been a very celcbrated physician for many years; but like many other men with superior minde; ohl how fallen. Rum, and its advocates, have got a most fearful account to balance.
7. Frenci and othen Rehbdies for yhronio Rheu-matism.-Dr. Bonnet, of Graulbet, France, states in a lotter to the Abeille Medicale, that he "Las been long in the habit of prescribing:

[^2]He was led to make the prescription from having used the oil of turpentiue to wash coal-tar and other sticking mixture from his hands. After having washed his hands in soap and wator, and drying them; a pricking sensation like an electiou spark upon the kuuckles from a machine, lasting about two hours, was always experienced, and it is to this exciting action that ho attributes its efficaey. It may be used twiee or thrice daily.
8. Chrouic rheumatism has been cured in twenty-four hours, after two years' suffering, by using alcohol, spirits of turpentiue, sweet spirits of nitre, and oil of juniper, equal parts of vich, mix; rub well into the parts, and take ten drops at bed time in water.
9. Dittelis for Chbonio Rnadmatisu.-Prickly-ash berries, spikenurd rout, yellow poplar and dog-wood barks, of each $\frac{1}{2} \mathrm{lb}$.; all pulverized and put into a gallou jug, and fill it up with brandy. Dusit-A wine-glass of it is to be taken 3 times daily before meals.

A baker of Lafayette, Ind., was cured by the use of this amount, of a very bad case of this disease of long standing.
10. David Mowhr, of Grenville, Ohio, says:-yellow pôplar, dog-wood, prickly-ash, wild cherry and white-ash barks of the trees, equal quantities of each, a good large handful. boiled in 2 gals. of water, to 1 , and add 1 gal. of good old rye, will, if taken freely 3 times daily, cure the worst inflammatory rheumatism in the world.

There is no question but what buth of these preparations, and the next also, are good, if made sufficiently strong with the barks. But I should consider them much more applicable in chronic cases, or rheumatism of long standing; and in these sases very applicable indecd, and I am well satisfied that no one will take them for the spirits.
11. Chronic Rineumatism, has been cured by taking the bark of a bearing arab-apple tree, and putting a suffioient amount of it into whisky to make it very strong, then toking a wine-flass three times, daily, until a gallon was used.
12. Green Bay Indian's Remedy for Rheimatism.-Wrhoo bark of the root, 1 oz.; blood root 1 uz.; black; polosh root 2 ozs.
ywamp hellebor $\mathrm{q}_{\mathrm{oz}}$; prickly-ash, bark or berries, 1 oz ; poke rcot, cut fine, 1 oz. ; rye whiskey 1 gt ; let stand a few days before using. Dose-One teaspoon crery 3 or 4 hours, lncreasing the dose to 2 or 3 teaspoons, as the stomach will bear.

Soak the feet well and go to bed, covering up warm, and taking the "Sweating Drops" between each dose, as there directed, for three or four hours, and repeat the sweating every dily until the disease surrenders to the treatment. If at any time the head feels too full, or the stomach sickens too much, drop down to the first dose of a teaspoon, or even less, if necessary:

This prescription is from Jacob S. Cornelius, an Indian of Green Bay, who was very successful in Illinois, with it, in this disease.
13. I know an old physician who assures me that he has cured eases where all other remedies failed, with saltpetre, beginning with twenty grains, and doubling the dose every three or four hours, until it reached half an ounce, in a very robust and plethoric patient; but this dose would be too large to venture upon by persons not of a plethorio habit. But as it is mostly prescribed, by putting a table-spoon to a pint of whiskey, then a teaspoon for a dose ; you might as well expect to dip the Atlantio into the Pacilic with a teaspoon, as to cure rheumatism in that slow way. It may be taken in quantities from half an ounce to an ounce and a half in the twenty-four hours, being largely diluted with water. If pain sliould come on in the stomach, under its use, stop it at once, and give large quantities of mucilaginous drinks, such as slippery-elm water, gum-arabic water, naz-seeù tea, \&c.
14. New Remedy.-Kerosene oil 3 ozs. ; skunk's oil 1 oz.; mia and shako when applied. Put it on quite freely, and beat it in by he stove, or by means of a hot shovel.

A firm of grocers, Slawson \& Geer, of this city, have been asing this mixture during the past winter upon their own persons, and have recommended to many others amongsi them, ono of the Clergymen, and also the President of the University, and so far as they know, it has proved very successful, relieving the pain directly.
15. One of our physicians in the city has used a preparation very nearly resembling the above, but varying sufficient to
oz. ; poke lays betore easing the
varm, and , as there sweating nent. If hickens n, or even
an Indian 3, with it, lat he has saltpetre, lose every in a very ld be too ric habit. spoon to a might as ith a teat may be unce and 1ted with under its mucilagiic water,

1 oz. ; mix at it in by
anve been their own amongsi ot of the very suc-
satisfy myself that any otner animal oil will do as well as that from the highly flavored one, above mentioned.

He used kerosene oil 2 ors.; neats-foot oil 1 oz ; oll of origanum $\frac{1}{2}$ oz. ; mixed and sliaken us used.

The smell of the kerosene is not very pleasint, but if a pair of ankles and feet, badly swollen, so much so that you could not walk on them for months, could be curcd in two or three weeks, as it was in this case, it might be well to put up with its disagrecable smell. Rub and heat it in thoroughly twice daily.
ASTHMA.-Remedies.-Elecampane, angelica, comfrey, and spikenard roots, with hoarhound tops, of each 1 oz ; bruise and steep in honey 1 pt. Dose-A table-spoon takeu hot overy few minates, until relief is obtained, then several times daily until a cure is effected.

It cured a young lady near the "Falls of the Ohio," whom the dootors said it was wicked to disturb; " let her die in peace," was their advice to the parents. An old lady, instead, let her live in peace. It will be found very excellent in any cough, even low consumptives will find great relief from its use.
2. Dr. J. K. Finley, of Pittsburgh, cured a lady with whom I afterwards became acquainted, and from the completeness of the cure I was induced to write to the doctor and obtain the prescription. It is as follows:
Oil of tar 1 dr . ; tincture of veratrum viride 2 drs ; ; imple syrup 2 drs ; mix. Dose-For adults 15 drops three or four times daily.

## I have very great confidence in this prescription.

3. A lady at Yellow Springs, 0 ., tells me that she cured hersel ${ }^{1}$ of Asthma by using for her common drink a tea made of the leaves of common chestnut, which had fallen from the tree in autumn ; sweeten well, and continue its use for 2 or 3 months.

She used it for a month at first, and it returned, when sile continued its use for two months; and ten years have elapsed without its return. It is certainly safe as well as simple, and of easy trial.

Lobelia is considered by some a specific in asthma, but the projudice against it is so great I forbear speaking further of it, but:
4. Iodide of potassium has cured a bad case of asthma sy
taking 5 gr . doses, 3 times daily. Take $\frac{1}{8} \mathrm{oz}$. and put it iato a vial, and add 32 teaspoons of water; then 1 teaspoon of it will contsilu the $\mathbf{5}$ grs., which, put into gill more of water, and drink before meals.
COMPOSITION POWDER.-THoMPson's.-" Bayberry bark 2 lbs. ; benlock bark 1 lb . ; ginger root 1 lb . ; cayenne pepper 2 ozs. ; cloves 2 ozs. ; ali Anely pulverized and well mixed. Doss-One-half of a teaspoon of it, and a spoon of sugar ; put them into a teacup, and pour it half full of bolling water; let it stand a fow minutes and fill the cap with milk, and drink freely. If no milk is to be oltained, fill up the cup with hot water.
"This, in the first stages and less violent attacks of dis. case, is a valuable medicine, and may be safely employed in all cases. It is good in relax, pain in the stomach and bowels, and to romove all obstructions caused by cold. A fow doses the patient being in bed with a steaming stone at the feet, or having soaked the fect fifteen or twenty minutes in hot water, drinking freely of the tea at the same time, will cure a bad cold, and often throw off disease in its first stages." I use it, taking, or giving lobelia emetics, as mentioned under the hea' of "Eclectic Emeties." I use it also, as a:
2. Dyepeptic Ten.- Where an attack has been brought an by over-indulgence at an extra rich meal, you will find immediate and gencrally perfect relief by having a cup of this tea made, and drinking about one-half of it fifteen minutes before meals, and the balance just as you sit down to the meal, not taking any other fluid at all until after digestion is over, following up the same plan for a few days or weeks, as may be necessary. It stimulates the stomach to action, causing digestion and absorption, preventing also the accumulation of gas, which is the cause of eructations of wind from the stomach, commonly called belching, aid gives tone to the whole system.

A cup of this tea taken when going out into extreme cold, will be found a better warmer than the whiskey or any other ardent spirit, which so many resort to upon such occasions; and, what is best of all, it will be found:
3. A Perfect Cure sor Drunkenness.-Let those who are accustomed to the excessive use of ardent spirits, apd who wish to stop the prutice, I say, let, such have a cup of this tea made, as above divected, and drink a part of

## medical derartament.

$t$ Into a $f$ it will td drink

## bark 2

 epper 2 Dossmin into ad a fow milk is ch and ild. A tone at ninutes e time, ts first menuse it ill find cup of $n$ minown to digeslays or tach to ulso the ions of d gives 1e cold, y other asions ;those spirits, have a part of

It immediately on rising in the morning, and the balanod just before meal time, keeping entirely away from tho places of temptation, they will Cind a warm, healthy glow spreading from the stomach over the whole system, with a desire for food, instead of "rot gut." Follow this up faithfully two or threo times daily, or whenover the craving becgins for the accustomed stimulus, for a fers days or weels, if necessary, and it will be found that the cayenne, which is the purest stimullant in the whole Materia Medica, with its 'assistant, the bayberry, which stimulate without an after prostration, have gradually supplied and satisfied the previous talise p.ppetite or cravings of the stomach; whilst the combination has toned up the stomach together with the whole system, and again you find yourself a man. But rensmber, oh, renember! your only safety is in keeping entirely away from places where intoxicating spirits are leept or sold!

A burned ehild will not play vith fire. I would to God that a burna! man was equally wise. For not one in a thousand can resist the solicitation of enemics (called friends), to tako a glass, just one, and that one glass acts like fresh coals upon extinguished brands, and the fire gocs ahead again with a bundred fold move energy than if thrown upon wood which had never been charred; hence the propriety of the sentence "plucked as a brand from the everlasting burnings "-for if re-kindled there is but little prospect of another extinguishment of the raging fire. Dr. Thompson, notwithstanding all that has been said against him, has done more good than any other medical man that cvor lived; for he set the people to studying for themselves.

[^3]
## 142

It may be used in place of the "egg-nog" spoken of in the treatment of consumption, No. 6.

ALTERATIVES-SyROp or Brood Purifier.-Hondaras sareaparilla 12 ozs.; guaiacum shavings 6 ozs. ; wintorgreen leaf 4 ozs. ; sassafras root bark 4 ozs. ; elder flowers 4 ozs.; yellow dock 3 ozs, ; burdock root 4 ozs. ; dundelion root 6 ozs. ; bittersweet roat 2 ozs. $;$ all bruised. Place these ingredients in a suitable vessel and add alcohol 1 pt., with water sufficient to cover handsomely, set them in a moderately warm place for 3 or 4 dass, pour off 1 pt. of the tincture and set it aside uncil yous add water to the ingredients and boil till you obtain the strength, pour off and add more water and boil again, then boil tho two waters down to 1 qt ; strain, and add the liquor first poured off, and add $21-2 \mathrm{lbs}$. crushed or coffee sugar, and simmer to form a syrup; when cool, bottle and seal up for use. Dose-One to 2 table-spoons, according to the age and strength of the patient, balf an hour before meals and at bedtime.

This, or any other alteratipu, when given, should be followed up for weeks or mouths, uccording to the disease for which it is prescribed, as scrofula, and for every disease dopending upon an impure condition of the blood. It ought to be used in sore eyes of long standing, old ulcers, saltrheum, \&e. I would not give this for Jayne's Alterative, nor Swain's, Townscnd's or Ayre's Sarsaparillas, beeause I know it.is good, and we also know what it is made of.
2. Alterative, Very Strong.-Poke, mandrake, yellow dock, sassafras, blue flag, roots, and bark of the roots, guaiao wood raspings, and sweet elder flowers, of each 4 ozs . ; caraway seed 3 ozs. ; bruise the roots, and put to the whole, alcohol 1 qt., and water to cover all handsomely ; let stand 3 or 4 days in a warm place as the last recipe above, making every way the same, except to pour off 1 qt. iustcad of 1 pt ., as in the first, of spirit; then boil the waters to 1 qt ., adding 4 lbs , of sugar with the quart of spirit tincture. The dose being only 1 table-spoon 4 times daily as above.

But if that amount should make the bowels too loose, reduee the quantity; and if that amount does not act upon the bowels at all, increase the dose to keep the bowels solv- - ent. This may be used in the most inveterate diseases of long standing, syphilis not exocpted.
3. Alterative Cathartio-Powder.-Rochelle selts, 5 ozs.; cream of tartar 2 ozz. ; suiphur 1 oz. ; [epsom salts may be used, but are not quite as good,] place the salts in a dripping-pan and set in the stove oven until all the water of crystalization is dried gut; then place all in a mortar and rub finely and thoroughly
together. Dosm-MIx up few apoons of the powder with molasses; then take a teaspoon every three or four hours until a cathastio action is kept up for 24 to 36 hours ; then take once or twice daily only, to act on the blood, lnoreasing once in ten days to get up the cathartic action, as at first.

This alterative is especially valuable in any disease of the skin, as itoh, pimples, salt-rheum, and any other craptions where an outward application is being made, or il about to be mado, also valuable in sore eyos.
4. Almartive, Tonio, and Capilaitio Bitters.-Best rye whisky, and water, of eanh 1 qt. $;$ best unground Peruvian bark, colombo root, and priekiy-ash bervies, of each 2 ozs. ; pricklyash, black oherry, and poplar barks, of eaoh 1 oz ; all to be the dry articles, and ail to be pulverized bofore putting into the spirits; shaike every day for a week, by whiloh tlme it will be ready for use. Dosk-One or two table-spoons at morning and evening meals.

Although this alterative is mentioned last in the list, yet it is not least in value. ${ }^{\circ}$ I first made this prescription for my own use, feeling that I needcd something of just such a nature, and it worked so admirably, that I gavo it to others. It has given such entire satisfaction that $I$ am now at the tenth edition giving it a place to do a greater good than if kept from the world.

If, in any case, it causes any griping sonsations, or too great action upon the bowels, lesson tho dose, and if neither of these actions are folt, increaso the dose, or take it three times daily. I think any of the fruit wines will do in place of the spirits and water, by adding alcohol one-half pint.

It will be found very valuablo in all cases of weakness from general debility, and especially so when the liver is inactive, known by constant costiveness.

After using out the spirits, it may be filled again in the same way. It will be found very valuable in ague, and after all fevers, preventing relapso, and strengthening up the general system.
DIURETICS.-PILL, DROPG, Drooctron, bon-Solldifea eopaibs 2 parts; alcohollo extract of oupebs 1 part; formed into pills with a little nil of juniper. Dosm-1 or 2 pills three or four. times daily. Druggists can obtain them of Tilden \& Co., New. Xork

## 144

The pill has been found very valuable in affections of the kidneys, bladder, and urethra, as inflammation from gravel, gonorrhea, gleet, whites, lucorrhea, common inflammations, \&o. For giving them a sugar coat, see that heading, if desired.
2. Dicretto Drops.-Oil of cubebs $\frac{1}{2}$ oz. ; sweel oy $y$ rits of nitre $\frac{1}{2}$ oz. balsam of copaiba 1 oz .; Harlem 0 il i bottle ; oil of lavender 20 drops ; spiriss of turpentine 20 drops ; mix. Dose-Ten to 25 drops, as the stomach will bear, 3 times daily.

It may be used in any of the above diseases with great satisfaotion.
3. Ditretio Dincuriton.-Queen of the meadow, dwarf elder, yellow dock and poke-routs, of each 1 oz ; dandelion, burdook, American Sarsaparilla, and blue-flag roots, of each $\frac{1}{2}$ oz.; grind or pound all up,tand thoroughly mix. Dose-Take up a pinch with the ends of the fingers and thumb of one hand, say $\frac{1}{t}$ to $\frac{1}{2}$ oz, and pour upon it 1 pt . of boiling water, steeping a while; when cool, take a swallow or two suffciently often to use up the pt.' in the courve of the day.
Follow this plan two or three days, or as may be necessary, resuming the course once in ten or twelve days. It may be used in all obstructions of the kidneys, where the urine is high colored or scanty.
4. Ditretio Tincture.-Green or growing spearmint mashed, put into a bottle and covered with gin, is un excellent diuretio.
5. Droretio for Children.- Spirits of nitre; a few drops in a little spearmint tea, is all sufficient. For very young children pumpkin seed or watermelon seed tea is perhaps the best.
DROPSY-SYRUP AND PuLs.- Queen of the meadow root, dwarf elder flowers, berries, or inner bark, juniper berries, horse-radish root, pod milkweed or silk weed, often called, root of each 4 ozs . priokly-ash bark or berries, mandrake-root, bittersweet bark, of 1 pt root, of each 2 ozs ; white mustard seed 1 oz ; Holland gis 1 pt.
Pour boiling water upon all, except the gin, and keep hot for twelve hours; then boil and pour off twice, and boil down to three quarts and strain, adding three pounds of sugar, and lastly the gin. Dose-Tako all the stomach will bear, four ti as daily, say a wine-glass or mo. This will bo used in conneetion with the following.
2. Dropsy Pilis.-Jalap 50 grs. gamboge 30 grs., podophysllin. 20 grs . ; elaterium 12 grs ; aloes 30 gra ; cayenne' 35 gra ; cautile soap shaved, dried and pulverized, 20 gran ; croton oil 90
ions of the om gravel, mmations reading, il of lavender -Ten to $\mathbf{2 5}$
with great
rarf elder, , burdook, ; grind or pinch with $\frac{1}{2}$ oz, and vhen cool, pt. in the $t$ may be urine is
mashed, retic. rops in a children
ot, dwarf se-radish h 4 ozs: ; bark, of land git
reep hot nd boil unds of tomach

This
drops ; powder all ©nely, and mix thoroughly ; then form into pill mass by using a thick mucilage made of equal parts of gum arabic and tragacanth, and divide into 3 gr. pills. Dose-One pill every 2 days for the Grst week, then every 3 or 4 days until the water is evacuated by the combined ald of the pill with the above syrup.

In this disease the work must be very thorough, and I am inclined to think that if our directions are followed, that whoever find themselves under the operations of the medicine will consider the work to be about as thorough as we expect. Some sickness of the stomach may be expected under the operation of the pill, but never mind it, go ahead, and four or five days will satisfy most persons of the value of the treatment; for you may expect to see the grentest evacuation, front and rear, that you ever have witnersed. If the patient should become weak and exhausted under the continued treatment, slack up a little and throw in beef tea, wine, \&e., with rich, nourishing diet, and no danger need be apprehended. The above pill will be found very valuable in bilious colio, and other cases hard to operate upon. They have operated in fifteen minutes, but not usually so quick, of course; but it will generally be found best not to venture over one pill at a dose; two have been taken, however; but they made a scaitering among the waste paper, eausing fourteen evacuations, having to call for the second "chamber" the first fire. Some have called them the "Irish Pill," from their resemblance to the Irish girl with her brush and scrub broom. They make clean work.

## IRRITATING PLASTER-Extensively Used by Eqleotios-Tar

 1 lb .; Burgundy pitch $\frac{1}{2} \mathrm{oz}$; ; white pine turpentine 1 oz ; rosin 2 ozs. Boil the tar, rosin and gum together a short time, remiove from the ifre, and stir in finely pulverized mandrake root, blood soot, poke ioot, and Indian turmip, of each 1 oz.This plaster is used extensively in all cases where counter irritation or revulsives are indicated; as in chronic affections of the liver and lungs, or diseased joints, \&o. It is applied by spreading it on loth and over the seat of pain, renewing it every day, wiping off any matter which may be orit it, and aiso wiping the sore produced by it with a dry oloth, until relief is obtained, or, as long as the patient can bear it. Always avoid wetting the sore, as it will cause inflammation, and you will be obliged to heal it up immedi-
ately, instead of which the dosign is to keep a running sore as long as may bo necessary, using at the same time constitutional remedios as the easo may require.

INFLAMMATION.-Ow the LIVER.-Inflammation of the liver, or as it is generally called, "Liver complaint," is of two forms, acute and chronic. The acute form is known by a sense of weight and pain in the right side, under the short ribs, and often in that shoulder, or between the shoulders, pale or yellow appearance, often great; depression of spirits, not much appetite, costiveness, high colored urine, \&c., and often much fever, and sometimes with pain similar to that of pleurisy, difficuit breathing, dry cough, and sometimes sickness, with vomiting.

In the chronic, or long standing complaint, in addition to the above, there is generally flatulence, with pain in the stomach, foul breath and mouth, coated tongue, indigestion, eyes yellow, stools clay colored, with great weakness and slow emaciation, frequently going on to ulceration, giving symptoms as mentioned under the head of "Ointment of Uleerated Liver," \&c.

In the acute form you will pursue the same course as mentioned under the head of "Pleurisy," besides taking either of the Liver Pills or Liver Drops mentioned below, in full cathartio doses, until relieved; but in the chronio form, the Pills, in connection with the "Ointment," or "Irritating Plaster," will bo found all sufficient, unless Jaundice tas already set in; then look to the directions under that disease.
2. Eciectic Liver Pirl_-Podophyllin 10 grs, ; leptandrin 20 grs. ; sanguiuarine 010 grs ; extract of dandelion 20 grs ; formed into 20 pills, by belng molatened a little with some essential oil, as cinnamon or pepperment, \&s. Doss-In chronto diseases of the liver, take 1 pill at night, for several days, or two may be taken at first to move the bowels; then 1 dally.

In conneotion with the pill, wear the " Irritating Plaster" over the region of the liver, washing the whole body daily, by means of towels, and rubbing dry, heing ioreful not to wet the sore caused by the plaster; as an active cathartic

[^4]fro omi Ph
3.
cay
see mas
dro]
mor
arot
from two to three pills may be taken in all cases where calomel or blue pills are considered applicable by "Old School Phygioians."
3. Liver, Pill Improved-Leptandrin, 40 grs.; podophylin and cayenne 30 grs each ; sanguinarine iridin and ipecas 15 grg each; see that all are pulverized and well mixed ; then form into pillmass by using 1-2 dr. of the soft extract of mandrake and a few drops of anise oil, then roll out into three-grain pills.

Dose-Two pills taken at bedtime will generally operate by morning; but there are those who will require three, whilst one pill every night on retiring, will be found the best corrective of the liver of anything now in use, for common cases; but in very bad cases where the pill does not arouse the liver to action, take the following:
4. Liver Drops for Obstinate Cases.-Tinctures of mandrake and blue flag roots, of each $1-2 \mathrm{oz}$. ; and of culvers root 2 oz Dose-For adults, 1 teaspoon every 3 to 5 hours, increasing the dose gradually until you reach two or three teaspoons, if the mouth docs not become sore, and the stomach not aickened, nol the bowels moved too freely.

These drops are especially applicable in liver and spleen enlargements, and cases of very long standing disease of these organs; and in such cases it may be well to use externally, over the liver and spleen, especially if there is believed to be ulceration, the following:
5. Onitment for Ulckrated Livirr, Ague Care, \&G-Take a good handful of smartweed, wormwood, and the bark of sumao root, boil all together to get the strength, then strain and boil down earefully to $1-2$ pt., adding lard $t$ lb., and simunering together; when nearly cool add a teaspoon of spirits of turpentine.

Apply at night, by rubbing it over the liver or other organ which may have pain or disease located upon it, heating it in well by the stove or by a heated iron, putting it on, rubbing, and heating it in thee or four times each application.

I obtained this prescription from the Rev. Mr. Fraser, of this city, whose nephew was so afflicted with ulceration of hine liver that a council of doctors said he must die; the pain was situated just under the short ribs of the right side, completely bowing him together, like the one of old, why could "in no wise lift up herself." Io had had a sisty

Who died some years before; but at this juncture of the case the invalid dreamed of meeting her, and she gavo him this prosoription, which he told his mother in the morning; and she would not rest until it was tried, and it entirely cured the patient. The Elder tells me he has given it to a great many persons, for pains of internal organs; ague cakes, \&c., two first named articles I know to be good for what they are here recommended, but they are generally used by boiling and laying the herbs over the affected parts, cr by steaming the parts over the herbs. I see no reason why spirits from the other world should not be permitted to communicate with the spirits of friends here; but that they are so porinitted to communioate in such a way to be understood by ur firil mortals, I never did nor do I now believe, neither do I believe this to be the first dream of this character which has proved valuable. There are many things of a see be sul drt fur is $u$

This is the prescription of the Rev. John .I. Dagnal, the "Retired Physician," brought out in 1854, and to my attention, and that of the medical class, by Prof. Palmer, in. the University of Michigan, in the winter of '56-7. He said when this prescription first came out he was practising in Chicago, and many persous sent for the pills, and derived much benefit from their use, at first, but soon after they ${ }_{i}$ scemed to lose their eflicacy, and he presumed the reason to be that the demand was so great that something else was substituted in place of the extract. This being the case, draggists ought to prepare the extract themselves, so as to furnish patients with the genuine article for home use. It is undoubtedly a splendid prescription, if put ap with fidelity.
2. Pills-To Sugar Coat.-Pills to be sugar-coated must be very dry, otherwise they will shrink away from the coating, and leave it a sheil. assily crushed off. When they aro dry, you will:
Tale starch, gum arabic, and white sugar, equal parts, rubbing. them very fine In a marble mortar, and ff damp, they must be dried before rubbing together; then pat the powder into a sultable pan. or box, for shaking ; now put a few pills into a small tin box laving a coyer, and pour on to them just a little simple syrup, shaking well to moisten the surface on! y , then throw. into the box of powder and keep in motion antil completely coated, dry and smooth.

If you are not very carefud you will get too mueh syrup upon the pills ; if you do, put in more and be quiek about it to prevent moistening the pill too much, getting them into the powder as soon as possible.
3. Anodrne Pilis.-Morphine 9 gra; ; extract of stramoninm and hyoselamus, of each $18 \mathrm{grs}$. ; form into pill-mass by using soIntion of gum arable and tragacanth, quite thick. Divide into 40 pills. Dosm-In case of severe pain or nervousness, 1 pill taken at bedtime will be found to give a quiet night of rest.

The advantage of this pill over those depending entirely upon opium or morphine for their anodyne properties, is;' that they may be taken" without fear of constipation.
oroue.-Siatle, but Effectual Remedy.-This disease is attendod with inflammation of the windpipe, spasms of the museles of the throat, oceasioning a peculiar sound, hard to be described, but when once heard by a mothor,
never to be forgotten; cough, difficult respiration, and fever. The phlegm or mucous often filling, or very much obstruct-

lard, of and add 3 nearly it bend pulthe fire ld, give
from $\frac{1}{2}$ to 1 teaspoon every $\frac{1}{2}$ hour, until relief is obtained, or on:ill vomiting takes nlace ; at the same time rubbing it upon the Jinest, and over the throat anail luags, freely.

Dr. it will of Finley, knows it will cure as often as quinine will break up the ague.

HYDROPHOBIA AND SNAKE BITES-TO PREvent, and Cure. - A. Hubbard, of Boone Co., Ill., in a letter to the St. Louis Republican, says: "Eighteen years ago my brother and myself were bitten by a mad-dog. A sheep was also bitten at the same time. Among the many cures offered for the little boys, (we were then ten or twelve years old,) a friend suggested the following, which he said would cure the bite of a rattlesnake:

[^5]There is no doubt in the auther's mind but what this gentleman has made a mistake in the kind of ash meant, as the upland ash is white-ash, from which flooring is made, having a thick, rough outside bark, whilst the black has a smooth bark, and grows in low, wet land, and is the same from which the flour barrel hoop is extensively mavufactured. It is the upland, white-ash that is to be used; it is known, as he says, to cure rattlesnake bites, and a gentleman of this place has tried with success in rheumatism, boiled very strong, and taken in half gill doses. May vomit and purge if taken too, freely. Yet a moderate action, either up or down, will not be amiss. I have cured a case of rheumatism, in a boy twelve or fourteen years of age, with tho above, since it came to my knowledge.
2. Saxon Remedy.-Gastell, a Saxon forester, now of
da Jacob Ely, a good old honest Quaker merchant, of Lloydsville, $O$., gave mo the following plan which his father had used since 1806 with success, to his knowledge, both on persons and domestic animals; and the New York Tribune has recently published something of the same character.
The dried root of elecampane; pulverize it and measure out 9 heaping tablo-spoons, and mix it with 2 or 3 teaspoons of pulverized gum arabic ; then divide into 9 equal porions: When a person is bitten by a rabid animal take one of these portions and steep it in 1 pt: of new milk, until nearly half the quantity of milk is evaporated ; then strain, and drink it in the mornlng, fasting for 4 or 5 hours after. The same dose is to be repeated 3 noornings in succession, then skip 3 , and so on until the 9 doses are taken.

The patient must avoid getting wet, or the heat of the sun, and abstain from high seasoned diet or hard exercise, and, if costive, take a dose of salts. The above quantity is for an adult-children will take less according to age. The Trilune's publication is as follows:
5. Tribune's Cure for Hydrophobia.-The following was sent to the N. Y. Tribune, by J. W. Woolstoin, of Philadelphia.
"Recipe.-First dose, 1 oz. of elecampane root, boiled in 1 pt . of milk until reduced to $\frac{1}{2}$. Second dose, (to be taken two

Take immediately after the bite, warm vinegar or tepid water, wash the wound clean therewith, and dry it, then pour upon the wound a few drops of hydrochloric acid, because mineral acids destroy the poison of the saliva.
3. Grecian Remedr.- Eat the green shoots of asparagus raty, sleep and perspiration will be induced, and the disease can be thus cured in any stage of cainine madness.
A writer in the Providence Journal says, a man in Athens, Grecee, was cured of hydrophobia by this remedy, even after the paroxysms had commenced.
4. Quaker Remedy-Fifty Years Sucoessivil.tha
wo

## MEDIOAL DEPABTMENT.

now of to the is made as used d many Hydropon the al acids
days after the first) $1 \frac{1}{2}$ ozs. of elecampane root, boiled in 1 pt. of milk, same as the first. Third dose, same as the second, (to be taken two days after)-in all, three doses.
If there is any virtue in the elecampane, at all, the preference, of course, is to be given to the Quaker's plan, which gives nine instead of three doses. But it substantiates Mr. Ely's plan, as it comes from the place of his father's former residence. Consequently it would seem to strengthen confidence in the first.
6. Snark Brtes.- In case of being bitten by any of the poisonous snakrs, the best plan is to wash off the place immediately, then if the position of the wound is such that you can get the mouth to the spot, suck out ali the poison in that way, or if any other person is present whose mouth is not sore, no danger need be apprehended.
For all the poisou way be upon the outside, and washed off, yet most likely penetrates more or less into the wound, if a snake bite, as the arrangement of their teeth is such that the poison comes out near the point, and when in the wound, thus you see the propriety of suoking it out, $\mathrm{O}_{\mathrm{r}}$ :
7. Spirits of ammonia, a small vial of it can be carried in the pocket, and if jitten, sharpeu a little piece of wood to a small point, dipping this stick into the ammonia, and then penetrating the wound with it. A piece of lunar caustic can be carried in the pocket, and sharpened, if nceded, and used the same as the stick and ammonia-and one of the celebrated English farriers has reported that this canstic, used freely on the bite of the mad dog, destroys the poison; but to insure even a feasonable hope of success, it must be used immediatily. This holds good in any of the sucking or caustie applications.

All persons working on or near marshes, or wherever the massasauger is known to inhabit, should always have one of these caustics with them.
1 8. But when a person is bitten in the absence of all these caustios, and not being able to reach the spot to suck out the poison, he must drink whisky enough to get as drunk as a fool, or his whole dependence must be upon the ash asparagus, or elecampzne.

The National Intelligencer, a year or two since, published a recipe for the cure of the rattlesnake bite, which it claimed was infalliable, it aaving been tried in a number of cases, and always with suceess. It. was nothing more nor less than the use of whisky as above recommended, and it

## 154

## DR. CHASE'S REOIPES.

is but justice to say that a daughter of Wm. Reid, of the town of Pittsfield, in this county, who was bitten on the - arm some three years ago, was cured $2 y$ drinking whisky antil drunkenness and stupor were produced, aud she has. never felt any inconvenience from the bite since, which goos to show that the bite of the Devil's tea is worse than the bite of a rattlesnake.
9. I know an old physician who was called to a boy bitten by a rattlesnake, and in the absence of all other remedics, he cured him upon the principle that "The hair of the dog will cure his bite," taking a piece of the snake about two inches long, splittiug it upon the back, and binding it upon the bite. It cleansed the wound very white, and no bad effects were seen from it.
10. Sileritcs, moistened and oound upon the bite; then dissolve ruore, and keep the parts wet with it for a few hours, has cured many massasauger bites, as also bee stings.
11. Snake Bitten Cattle.-Remedy.-Cattle or horses are usually bitten in the feet. When this is the case, all that is necessary to do is to drive them into a mud-hole and keep them there for a few hours; if upon the nose, bind the mud upon the place in such a mânner as not to interfere with their breathing. And I am perfectly satisfied that soft clay mud would be an excellent application to snake bites on persons, for I know it to draw out the poisoning from ivy, and have been assured that it has done the same for snake bites, of persons as well as for cattle.
eye preparations.-Eye Water.-Table sait and white vitriol, of each one table-spoon ; heat them upon copper or earthen until dry; the heating drives off the acrid or biting water, called the water of crystalization, making them much milder in thein action; now add them to soft water $\frac{1}{2}$ pint ; putting in white sugar 1 tablespoon; blue vitriol a piece the size of a common pea. If it should prove too strong in any case, add a little more soft water to a vial of it. Apply it to the eyes $\mathbf{3}$ or 4 times daily.
If the eyes are very sore, or if the soreness has been of long standing, take the "Alterative Syrup," or the "Cathartio Alterative," continuing them for several weoks, according to the necessities of the vase. Ind it an excellent plan, in using any preparation for sore or week eyes, to apply it agnin about twenty minutes from the first applica-
tion. For wett babe thom whe cana

2. the a used, sucoe nearl lish:
tion. More than double speed is made by this repetition. For inflammation of any part of the body, apply this by wetting cloths. Even for sores about the ears and groins of babes, reduce it, and three or four applications will cure thom. I have also found it valuable for horses, as a wash, When they got the eye injured by straws, or otberwise, which causes the eye to water, or matterate, using it freely. -
The use of this eye water enabled me to lay by the speopeles after four years wearing, and I have since stndied yodicine and graduated as a physician, without resorting atain to their use, by the occasional applioation of the eye whor. But I need not have resorted to the use of the eye waer agaiu, had I not done in study, as I do in all things eise tnat 2s, when I have anything to do, I do it with all my night. I read steadily, day by day, sixteen hoursmorethan five other students read altogether, who roomed at thesame house. Yet this counted in the end; for when the chas began to inquire and look around, near the end of the ter, for one to deliver the Vatedictory, on their behalf, which isthe custor. in the Eclectic Medical Institute, I received thet, the first honor of the ciass. I do not mention this to bost, by no means, but to show the necessity, as well as the adjantages, of hard study, especially to those who begin theirstudies late in life, and are obliged to pay their way with thir own hands, and support a family also. I his was my case practly. In the commencement of my medical studies, worked all day, reading half of the night, copying all th latin terms, with their signifioations, on a slip of paper, whioh I carried in my pocket during the next day, looking at two $r$ three of the terms at a time, through tho eay, until all wee committed. And thus I acoomplished no more than wht any other man may do, if he goes at it with a will, and loes as I did; and that some one may be stimulated to this ourse is the only object of this recital. Slee "Advice to Yong Men."
2. Dr. Raymond of Grass Lake, Mich., who obtained the above prescriptio of me , adds to each ounoe of water used, one grain of myphinc, and he tells me he has great success with it; the additicn of the morphine making itnearly resemble the celelrated presoription used by the English surgeons in India, thich is as follow:
3. India Prescription for Sorm Eyes.-Sulphato of zine, 2 gre.; tincture of opium (laudanum), 1 dr. ; rose water. 2 ozs. ; mix. 1'ut a drop or two in the eye, two or three tlmes daily.
4. An EYe Docior, of Xenia, O., makes great use of the following:
Sulphate of eino, acotate of lead, and rock salt, of each 1-2 oz. loaf sugar, 1 oz ; soft water, 12 oz ; mix without heat, and use an other eye waters.
5. Dr. UOor, of Ashtabula, O., mukes and sells lame quantities, under the hoad of "Cook's Eye Water." It.s
ooulc and sour cont us follows:

Sulphate of zino, 1 oz ; ;ugar of lead, $1-2 \mathrm{oz}$; precipitated arbonate of iron, 1-2 oz.; salt and sugar, of each 1 table-spoon ; the Whites of two eggs ; soft water, 32 ozs.; mix the whitos of the gg g, cinc, sait, lead, sugar, and iron, well together, then adj the water.
6. For Excessive Lnflammation or tee Eyes.-Poulite by bolling a handful of hops in water, putting in from 1-2 to dr. of opium, whlle boiling ; when stili warm lay the hops wer the eyes, and keep them wet with the water in which they were
bolled.

A lady who had been blistered and starved, acording to the old plan, in this disease, was soon cured by this poulicing, and washing the eyes often with the hopwater conraining the opium, with generous diet, \&o., conrary to the sxpectations of friends; and the predictions of cermics, to the plan.
7, If sore eyes shed much water, put a littlesf the oxide of inno into a viai of water, and use it rather freely - if will soon cure
8. Coppreas and water has cured sore eyes of long standing ; and used quite strong it makes an excellent application in eryeip-
9. Garden Rhubarb.-The juice of the root applied to the cye has cured bad cases.
10. Boil an egg, remove the yolk, and hive ready equal parts of sulphate of zine and loaf sugar, pulverizd ; fll the place occupied by the yolk, and squeeze ont the oi through a linen cloth, While hot, and apply as needed. If two trong, add a little rain water,

I sold a book to a Mrs ofohrotom in Wayme Go., 辛icin., who had used this proparation very successfully for several years, and had I not have already had it in my book, I
anol ment it ha tain

white and s bed.

I for famil films merc ing
an 0 me to duce
could not have purchased it of her for less than $f$ ivs dollars, and she regrotted very mueh that I was taking from her a source of profit by selling the books in her neighborhood containing the reoipe.
11. Sallons' Eft Prapars'don-Burn alum, and mix it with tho white of oggs, and put between two oloths and lay it upon the ses ; taking saits and croam of tartar, equal parts, to cleamse the yood.
This was given to me, and very highly recommended, by an old Scotch sailor, with whom I have had much enjoyment, talking over the sufferinge of the sen, he having used it hany times in places where nothing else could be obtaind.
12.Fatier Pinenif's Preparation yor Very Bad Sorn Fyfes.Castill soap, scraped fine, and balf the quantity of very finely palverzed obalk; wet them up to a paste with strong juice of tobace ; when desired to apply to the eye, drop two or three drops of brauy into the box of paste; then tako out a bit of it where the bratily was dropped, equal in size to the fourth of a grain of Wheat;'to tho diseased eye ; wet it on a bit of glass, and put it into the ee with a camel's halr pencil.

Apply t twise daily at first, and from that to only once in two days, for from one to two woeks, will and has cured wretchod bid eases; so says old Father Pinkney, of Wayne Co., Mich., who has used it over fifty years, he being over ninety yearsof age. His only object in giving it an insertion here is $t$ do good to his follow oraatures; and also for animals; it beigg equally applicable to horses or cattle.
13. Indian Ers Water.-Soft water 1 pt.; gum ambis 1 oz. ; white vitriol 1 oa ; fine salt t teaspoon; put all into a bottle and shake until ditolved. Put into the eye just as you retire to bed.

I paid Mrs Pinty, South of Ypsilanti, Mich., fiftr cents for this prescription She would not, however, let her own family know its combosition. Her husband had removed films from horses' eye with it, and cured Mr. Chidister, a merchant of Ypsilanti, by only two applieations, as the saying is, after he had "tied everything else." It carne from an old Indian, but my knowledge of the articles would lead me to say for common, ableast, it would require to be roduced one-half.
14. Tobacco Eft Water.--Mine cut tobacco the eize of a
common hiciory nut; sugar of lead equal in bulk; rain water \& ozs. ; oplum the size of a pea. Reduce it with more water if neoesmary.
ply 0 of gla - 15. Verpigris and Honey have cured inflamed eges, by using just sufficient virdigris to color the water a grass color, then making it ene-third honey. It is also said to prevent scars by using upor
burns.
16. Raw Potato Poultice, for inflamed ejes, is one of the vedy best applications in recent cases, scraping fine and applying filb-
quently. .
17. Slippray Ely Poulticess are also an excellent application, used as cubore.
18. Films-To Rimotz prom the Eye.-Wintergreen leaf, brused, and stewed in a suitable quantity of hen's oil to make the oil strong of the wintergreen-strain and apply twice daily.

The above cured a boy of this city, and I am sacisfied that the hen's oil has cured recent cases, without the vintergreen, but with it, it has cured beasts also. For ases of a year or two's standing, however, it is best to use the fol-
lowing:
19. Livas. Water 1 pt.; fincly pulverized verdigris $\frac{1}{2}$ oz. ; set on ombers for 1 hour, then strain aud bottle tight. Toch the film aver the pupil, or on the speck, 2 or 3 times daily, by putting the point of a small camel's hair pencil into the prepartion, then to the eye, holding away the lids for a short time ly placing the thuiab and finger upon them for that purpose.

It will be found necessary to persevere for two or three months with this application, and also to us one of the A1teratives to cleanse the blood. This couse, pursued for three months, gave sight to a young lady sho had not seen light for two years, which doctors could not do, nor were willing for others to do.-
20. Efre Salfe. - Take white precipitate teaspoon. and rub it Into a salve with 3 teaspoons of fresh lard/and applied upon the outside of the lid of the worst chronic [loyd continued] sore eyes, has cured them when tiney were so bad hat even the ejelashes [cilia] had fallen out from the disease.

A physician was cured with thiseye salve when he could not cure himself. If red peroipitto will cure the itch, why ahould not the white cure diseasy of the eye.
21. Sore Exes-To Remove wim Granulatrons.-Crystalized nitrate of silver 2 grs ; morphia gr ; blue vitriol 1 gr. ; sal. by $m$ er if neces-
ply once fally, by patting a small bit of the mixture upon a piece of glasa, moistening it with a little water, and patting into the eje by means of a maill camel's hair pencil.
22. Anotiger Method.-Is to take a stick of tag-alder about 2 foet long, boring a hole nearly through the middle of the atick, crosswiss, filling it with salt, and plugging it up; then put one end into the fire and charr it nearly to the salt, then the other end, the same way and finally pnlverizing and applying the salt, the same as the abovo, once daily only.

In either case after the granulatious (little lumps) are re moved fron the eye, or eyes, finish the cure by using any of the foregoing eye waters which yon may choose; all the time using some of the alteratives for oleansing the blood.

FEVER SORES-PLASTER, SALVES, \&o.-Btact SalveSweet oill, linseed oil, and red lead pulverized, of each 1 oz. [or in these proportions.] Put all into an iron dish pver a moderate fire, stirring constantly, untill you can draw your finger over a drop of it on a board when a little cool, without sticking. Spread ou cloth and apply as other Balves.

My brother, J. M. Chase, of Caneada, N. Y., says he has used this salve about fifteen years, and knows it to be one of the best in the world for all kinds of old sores, as ulcers, fever sores, and all inflamed parts, cleaning, or taking out redness or inflammation, cauising a white, healthy appearance in a short time, and a certain preventive of mortification, \&o., \&co, as well as to prevent soreness in more recent cuts and bruises, also; and from my own knowledge of a salve which is very similar, I have introduced it into this work, feeling assured that whoever may have occasion to try it, will not regret the space it occupies, especially after reading the following: A gentleman said to me during the past summer, "I will give you ons of the most valuable salves in the world, for I oured a man's hand with it which was so swollen that it looked moro like a ham than a hand, and two Dootors said it must be cut off, also ulcerated." When he told me how it was made, I opened my book to the above salve, which was precisely the samo as the one he used.

## 2. Red Salve.-Some prefer to prepare the malve as follows:

fied lead̃ I ib.; beeswax and rogin, of each 2 oms.; ; linseed and sweet oils, of each 3 table-spoons ; epirits of turpentine 1 teaspoon; melt all, except the first and last, together, then stir lo the lead and stir until cool, adding the turpantine.

Usod upon fever and all other sores of an inflammstinj character; at the samo time taking the following pill to purify the blood.
3. Mandraks root, diled and pulverized 12 and in the same way, $1-4$ oz. ; form into pulized, $1-2 \mathrm{oz}$; blood root DOSE-Three pills may be tate pills with extraot of dandelion. then add another pill, and at the at bed-time for 2 or 3 dayn; tio you choose ; then take fodide end of a week take any catharia Hal with 1 oz. of water, and take potash 10 grs., and put it into more water, instead of the mandre 20 or 30 drops of it in a little that pill again, as at frat.
By the time you have gove around three or four times, the blood will be pretty thoroughly sleansed-do not be afraid of the mandrake pill, as it will not act as a cathartic, but simply work upon the blood-if it does, reduce the number. You will bo ploasod with the method of purif-:
cation.

> 4. IndIAN Cure- - A. A. Paterson, of Ashtabula, C Was oured by an Indian physician, in Cleveland, of one of the worst fever sores almost sver known The the worst fever sores almost siver known. The muscles of his leg were so contrneted that no use could be made of his, leg in getting about. Four months, and the following treat-
A syrup of Wakoo (Euonymus Atropurpurens)-and here leti me say that the Wahoo la the great Indian remedy for purifying, ram added to make it by bolling very strong, then molasses ani: Was used suffolent to koen the ble and keep it from souring; this the bark of the root from whilioh thels solvent, sometimes cherwing part of the time to the ayrup. Tho syrup is made, preferring it a lowing salve: rosin 1 lb ; mutton sore was dressed wilh tho follinseed oil 1 pt . ; ambroolal (ulen tallow 1 lb . ; beeswax 1 lb .; make it; mix in an Iron kottlo and y flavored) soap 11-2 ozs.; to time. Spread on a oloth and applmmer 2 hours, stirring all the. muscles are anointerl with skunk'sply only needed. The contracted.

Mr. Paterson aleo ozts only. purposes. And as I havo a it very highly for all common which have been so highly reow other recipes for fever sores used them, I cannot onit thommended by those who have: oinlly recommend the next their insertion, and I would eepe-
5. Kitridal's ginm one following, called:
each $11-2$ lbo ; honvm.-Bitter-4weet and sweet elder rooft, oi root, of enoh $1-2 \mathrm{lb}$. ; tobacoo 1 ienves, and green plantain top and water to get out the atrengli, thee cont plug. Boil all in rain
and press out the juice, and boil down carefully to $1-2$ pt.; then add unsalted butter 1 lb.; beeswax and rosin, of each $1,0 \mathrm{z}$, and simmer over a slow ffre antil the water is all out.

I obtained the above from S. B. Newton, a farmer doctor near Moore $\quad$, Mich., who had cured fever sores with it of thirty-f"y years' standing; used it also on swellings in every case, once upon a boy who had an eye kicked out and swelled very bad; he kceps it in his stable ail the time for wounds of horses and cattle, in castration, \&c., \&e. I know it must be a very valuable salve.
6. Fever Sore Poulmtoe:-Sassafras, bark of the root, dried and pulverized very fine ; make a ! and milk poultice quite thin, and stir in of the above pc , make it of proper consistence, applying 3 timcs in th. a hours for 3 weeks; then heal with a salve mado by thickening honey to -a salve with wheat
flour.

If there aro loose bones it will be quite sore'while they are working out, bui icrsevere. A ease was eured by it of twelve years' standing; the same man cured eight other: cases, aever having a failore, and it has proved successful oan aboess of the loins also.
7. Yeast Poviurice.-Fresh ycas., the thick part, thickeno with flour and applied to fever sores has proved very valuabls contipuing it for several weeks, touching any points, which io not heal rexdily, with finely pulverized verdigris rubbed up witt a little lard; then putting the poultice directly over the wh.-. again.

This heals, leaving the parts white and natural, insteach of dark, as I have soen miny cascs whioh had been cured.
8. Salve for Fevea Sores, Abolsses, Broken Breabts, do. Thorotighly steep tobacco $1-2 \mathrm{oz}$, in soft water 1 pt., straining out from the tobacco and 'boiling down to 1 gill; then have melted, lard, rosin, and beeswax, of each 1-2 oz., simmering to a thick salve, then stirring in 1 gill of old rum, and, if neoevsary, contiauing the simmering a little longer. To be used as other salves.
9. Onturant.-Sweet clover [sown in gardens] stewed in lard: then udd beeswax and white pine turpentine, equal parts, to form an ointment, is highly reoommended.
10. Salve for Fiper Sures, Cuts, \&o.-Spirits of turpgatine and honey, of each 1-2 pt, simmered ojer a nlow Are untit thej unita $1 \cdot 5$ zthriag; then set avide to cool until you can put in the Jolk of an egg without its belng cooked by the heat; stir. it in and return it to the are, adaling camphor gum $\$$ oz., simmer and otir until well mixed.

## 162

## DL. CHASE'S, RECIPES.

By putting in the egg when cool, it combines with the other, but if put in while the salve is hot it cooks, but does not combine. This is very highly recommended, as above indioated.
11. William Howely, a armer living about six miles from Jackson, Mioh. sayic he had a fever sore on his shin for twenty years, sometimes laying him up for months, and at one time preparations were made to cut off the limb, but wh old man in New Jersey, told him to:
Sorape \& fresh turnip and apply it every 4 hours, night and day, antil healed, which cured him.
And he feels assured from using it in other cases, that all will be pleared with it who have any occasion for its ase. Apply it oftener if it becomes too offensive.
salves.-Green Mountann Salve.-Rosin 5 lbs.; Burgundy pitoh, beeswax, and mutton tallow, of each $\ddagger \mathrm{lb}$. ; oil of hemlock, balsam of ar, oil of origanum, oil of red cedar, and Venice turpentine, of each 1 oz. ; oil of wormwood ooz. ; virdigris, very the oils, having, ioz.; melt the frrst articles together, and add olis, and put it in with the verdigris up with a little of the pour into cold water, and worker articles, stirring well; then roll.

This salve has no equal for rheumatio pains, or weakness in the side, back, shoulders, or any place where pain may locate itself. Where the skin is broken, as in ulcers and bruises, I use it withont the verdigris, making a white salve, oven superiur to " Pelog White's cld salve." It is valuable in Dyupepsia, to put a plaster of the green salve over the stomaoh, and wear it as long as it will stay on, upon the back aleo, or any place where pain or weakness may locate. In cuts, bruises, abrasions, \&o., spread the white salve upon sioth and apply it as a sticking plaster until well; for rheumatism or weakness, spread the green salve upon soft leather and apply, letting it romain on as long as it will stay. For sorns, spread the green salve upon oloth and put upon the cornn, letting it remain until cured. It has cured them.

A gentleman near Lancaster, O., obtained one of my books hàving this recipe in it, and one year aftermards Le tolla ouring an old lady of rheumatism in six weeks, who had

rgundy mlock, ice tur, very $1 d$ add of the ; then ugh to
been confined to her bed for seven weeks, covering all the large joints with the salve, without other treatment.
2. Conkinu's Czlubrated Salve.-Rosin 4 lbs. ; bees-wax, bargandy pitch, white pine turpentine, and mutton tallow, each $\{1 \mathrm{lo}$. camphor gum and baleam of fir, of each $\frac{1}{2}$ oz. ; sweet oill $\frac{1}{\text { oz. ; and }}$ alcohol $\frac{1}{2}$ pt. Meit, mix, roll out, and uso as other salves. Wonders have been done with it.
3. Balim of Gurad Salve.-Matton tallow; lb; balm of giead buds 2 ozs. ; white pine gum 1 oz . ; wh precipitate $\frac{1}{2} \mathrm{Oz}$; hard soap $\frac{1}{2}$ oz. ; white sugar one table-spoon. Stew the buds in the tallow until the strength is obtainel, and press ont or strain, scrape ihe soap and add it with the otier aricicles to the tallow, nsing safficlent unsalted butter or sweet oil to bring it to a propor consistence to spread easily upon cloth. When nearly cool, attr in the red precipltate, mixing thoroughly.

This may be more appropriately called an ointment. It is used for outs, scalds, bruises, \&e., and for burns by spreading very thin-if sores get proud flesh in thom, sprinkie a little burned alum on the salve before applying it. It has been in use in this county about foriy years, with the greatest success.
 in Pluce of Striches.-White rosin 7 ozs. ; bees-wax and nubtton tallow, of each $\frac{1}{2}$ oz. ; melt all together, then pour into cold water and work as wax until thoroughly mixed, then roll oat ints wait able sticks for use.

It may be spread upon firm cloth and out into niernow strips. In case of deep wounds, or cuts, it wili be found to firmly hold them together, by first pressing one end of a strip upon one side of the wound until it adheres, then draw the edges of the wound closely together, and press down the other end of the strip until it adheres also. The wtrips should reach three or four inches upon each sido of the out, and run in different directions across each other, to draw every part of the wound firmly in contact. It will crack easily after being spread until applied to the warm flesh, yet if mads any softer it cannot bo depended upon for any length of time, but as it is, it has bien worn as a struagth. oning plastar; ond remained oiz orer a year.
5. Prlieg White's Old Salve.-This, formerly celebrated, salve was composed of only threo very simple articles.

Our "Green Mountain Salve" is far aheaa of it, yet for the satisfaction of its old friends, I give you its composision :

Rosin 3 lbs. ; mutton tallow and beeswax, of each $\ddagger$ 1b.; melted together and poured into cold watar, then pulled, and worked as shoemaker's wax.

It was recommended for old sores, cats, bruises, rhcama-tio-plasters, \&c., \&c.

## 11.

The apparatus for making salves and lozenges consists of a board prepared with strips upon it of the desired thickness for the diameter of the rolls of salve, also a piece of board with a handle, with which to roll the salve when properly cooled for the purpose. The salve is laid between the strips, which are generally one inch thiok, then with the hamdle piece, roll it until that board comes down upon the strips which makes the rolls of one size, use a little tallow to prevent sticking to the boards or hands; then cut off the desired length and put a label upon them, to prevent them aticking to each other.

A roller and tin crtter is also necessary to complete the apparatus, with which, and another board, having thin strips upon it to correspond with the thiekness of lozenges required, you can roll the mass down until the roller touches the strips; and thus you can get them as well as the salve, of uniform thickness; then cut out with the cutter, laying them upon paper until diry.

"Take Hinth, 2
then, if not in too great a hurry, cover up the mortar in which you have rabbed them, and let stand from 12 to 24 hours to temper; at which time they will roll out better than it done immediately ; divide into 120 lozenges. See appara/us, above, for rolling, and cutting out. Dose-For a child one yeur old, 1 lozenge, night and morning ; of 2 years, 2 lozenges ; of 4 years, 3 ; of 8 years, 4 i of 10 years or more, 5 to 7 lozenges ; in all cases, to be taken twice daily, and continuing until the worms stait on a voyage of discovery.

A gentleman came into the drug store one morning, with the remark " Do you know what your lozenges have been doing?" As though they had killed some one, the answer was, no, is there anything wrong; he held up both hands together, scoop shovel style, saying, "They fetched away the worms by the double handful." It is needless to attempt to give the symptoms by which the presence of worma might be distinguished; for the symptoms of nearly every other disease is sometimes munifested by their presence. But if the belly be quite hard, and unusually large, with a peculiar and disagreenble breath, in the morning foul or furred tongue, upper lip swollen, itching of the nose and anus, milky white urine, bowels sometimes obstinately cos tive, they 23 obstinately loose, with a craving appetite, then leathing food at times; rest assured that worm medicins will not be amiss, whether the person be child, or adalt. It would be well to take a mild cathartio after four to six days use of the lozenges, unless the worms have passed off suffciently free before that time, to show their general destruction. Very high praise has also been given to the following:
2. Vermifuge Oil-Prof. Freeman's.-In the May number of the Eclectic Medical Journal of Cincinnati, O., r I find so valuable a vermifuge from Prof. Z. Freeman; that I must be exoused for its insertion, as the articles can always be obtained, whilst in some places you might not be able to get the santonine called for in the lozenges. His remarks following the recipe will make all needed explanations, and give confidence in the treatment.
 the oustom through the whole work.

> "Take of of chenopodii. o oz (oil of worm eseed) ; oil of teroAmth 2 drm (oid of turpentine) i, oil of sioini, 11 oas (castor
ofl); fuid extract of spigelia, $\frac{1}{2}$ oz (pink) hydrastin 10 grains ; ayrup of menth. pip. $\frac{1}{2}$ oz. (syrup of peppermint.) Dosk-To a child 10 years of age, a teaspoon 3 times a day, 1 hour before each meal; if it purges too freely, give it less often.
"This is an excellent vermifuge, tonic, and o-thartic, and has never failed (as well as I can judge), to eradicate worms, if any were present, when administered for that purwose. I have given no other vermifugo for tho last five years, and ofton one teaspoon has brought away from three to twenty of the lumbrica. Only a fer days ago I prescribed one fluid drachm of it (about one teaspoon), and caused the expulsion of sixty lumbricoids, and one fluid drachm, taken a few days afterwards; by the same child, brought away 40 more, some of them six inches in length. Where no worms are present, it answers the purpose of a tonio, correcting the condition of the mucus membrane of the stomach and bowels, improving the appetite ard digestion, and oporating as a mild cathartio."
3. Wona Tha-Carolina pink-roov, senna leaf, manna and Americau wormesed, of each $\frac{1}{2}$ oz.; bruise and pour on boiling water 1 pt ., and steep withont builing. Sweeten well, add half as moch milk. Dosis-A chili of five years may take one gill three times daily, before meals, or sufficient to move the bowels rather freely.

If this does not carry off any worms, wait one day and repeat the operation; but if the bowels do not move by the first day's work, increase the dose and continue to give it until that end is attained before stopping the medicine. This plan will be found an improvement upon the old, where the lozenges of oil cannot be obtained, as above.
4. Worm Caike.-- Fivalisi Remedy.-Wheat flour and jalap, of each 1 lb . ; calomel, grain-tin, and ginger, of each 1 oz . Mix thoroughly and wet ap as dough, to a proper consistence to roll ant: then roll out as lozenge cakes, to three-sixteenths of an inch int ticiness; then cut out to 3.4 inch square and dry them. Dosis .... - a a child from 1 to 2 years, $3-4$ of a cake; 4 to 5 years, 1 cake; from 5 to 7 years, $1 \geq$ cakes; from 7 to 10,11 1-2; from 10 to 12 , 14; from 12 to 14,2 ; from 14 to 17 , $2 \frac{1}{2}$; from 17 to 20 years, and all above that age, $2 \frac{1}{2}$ cakes, but all men above that age, 3 cakes.
"Chuiuren may eat them, or they can be shaved off very fine and mized in a little treacle, honey or preserves. If after taking the first dose, they do not work as you desire

increase the dose a little. The patient to take tbe medicino twice a week-Sundays and Wednesdays. To be taken in the morning fasting, and to be worked off with a little warm tea, water-gruel, or warm broth. N. B.-Milk must not be used in working them off, and be careful of catching cold.Smodin, Printer, Oaikham, Eng."

I obtained the above of an English family who praised it very highly as a cathartic for common purposes, as well as for worms. And all who are willing to take calomel, I have no doubt, will be pleased with its operations.

TAPE-WORM-Simple, but Effeotual Remedy.This very annoying and distressing worm has been removed hy taking two ounce doses of common pumpkin seeds, pul. verised, and repeated every four or five hours, for four or tive days; spirits of turpentine, also in doses of one-half to two ounces, with castor oil, have proved very effectual; the root of the male fern, valerjan, bark of the pomegranate root; \&ro., have been nsed with success. But my chief object in speaking upon this subject is to give the successes of Drs. Beach, of New York, and Dowler of Beardstown, Ill., from. their singularity and perfect eradication of the worm, in both cases: The first is from "Beach's American Practice, and Family Physician," a large work of three volumes, costing Twenty Dollars, consequently not generally ciroulated. whilst the latter is taken from the "Electio Medical and College Journal," of Cincinnati, and therefore only taken by physicians of that school. The last was first publishod by the "Now Orleans Medical and Curgical Journal." First then, Dr. Beach says:
"The symptoms of a tape-worm, as related to me by Miss Dumouline, who had suffered with it for twenty-five years, are in substance as follows: It commenced at the age of ten, and afflicted her to the age of thirty-five. The worm often made her distressingly siok at the stomach; she would sometimes vomit blood and be taken suddenly ill, and ocear cionally while walking. It eaused symptoms of many other diseases, great wosting of thet ficih, ©ivo. Fif appetite was very capricious, being at times good, and then poor for months, during which time her symptoms were much aggrsvated; sickness, vomiting, great pain in the ohent, atomadh.
and side, motion in the stomach, and also in the bowels, with pain, a sanse of fallness or swelling, and beating or throbbing in the samo, dizziness, heaviuess of the eyes,-and she was altogother so miserablo that sho feared it would dostroy her. When sike laced or wore anything tight; it produeed great distress. The worm appeared to riso up in hor throat and sicken her. Her general health was very bad. At intervals, generally some time after taking medicino, pieces of the worm would pass from tho bowols-often as many os forty during the day, all alive, and would swim in water.
"Trentraent.-Miss Damouline stated that she had employed twenty physlcians, at different periods, and taken a hundred different kinds of medioine without expelling the worm. She had taken spirits of turpentine; but could not retain it upen the stomach. Under these circamstances I conmmenced my tratment. Cowage stripped from the pod, a small teaspoon three times a day, to be taken fasting, in e little arrow-root jelly; then occasionally a purgative of mandrake. In counection with this, I directed her to eat freely of garlic and common fine sali. I gave theso under the belief that each article possessed, vermiftuge properties, without ever having administered them for the tape-worm.After having taken them for some time, all her unfavorable symptoms ceased, and subsequently the remaining portion of the worm passed lifeless from her-an unprecedented circumstance:
"She immediately recovered, and has since retained her health, and there is no evidence that there is any remaining. The patient stated that the worm which passed from her daring the time she was afflieted with it, would fill a peek moasure, and reach oue mile in length. Her relief and gratitude may be better imagined than described. I have a portion of this worm in my possession. When once the tape-worm begins to pass the bowels, care must be taken not to break it off, for it will gr: again-it has this peculiar property."
2. Secondly, Dr. Dowler says: "I'he subjeet of this notice is a daughter of Mr. E. Fish, of Beardstown, IIl., about six years old. The only point of special interest in the case consists in the effieiency of the remedy-to me wholly new, and acoidentally brought to my notice-which was used in its treatment.

 idred differShe had $t$ upon the treatment. imes' a day, ceasionally tirected her theso under properties, pe-worm. infavorable portion of d circum-ained her emaining. from her fill a peck relief and I have a once the taken not peculiar et of this town, Ill., nterest in y -to me e-whioh
prescription for whom was, as a drink, the mucilage of elm bark, made by putting pieces of the solid bark into water. The gidl was seen to bo frequently eating portions of the bark during the day; the next morning after which, upon my visiting the boy, the mother, with much anxiety, showed mo a vessel containing something that had that morning passed the girl's bowels, with bits of the elm bark, enteloped in mucilage, which, upon examination, proved to be about thire fect of tape worm. As I supposed the passage of the worin was accidental, and had ocourred from the looseness caused by the bark, I procetded to prescribe what I supposed a niuch miore potent anthelmintic, a large dose of turpeutine and castor oil. The turpentine and oil were given several times during the three consecative days, eausing retty active purging, but with no appearance of any porions of the woim. The girl being slender, and of irritable temperament, I was forced to desist fiom further active medieations; and partly to allay irritation of the bowels, and partly to test the influences of the bark on the worm, I directed that she should resume the use of the bark as before, by ohewing and swallowing in moderate quantities.
$\therefore$ On visiting her the succeeding inorning, I was shown portions of the worm, mostly in separate joints, that had been passed over night. Fceling now some confidence in the anthelmintic powers of the elm bark, I directed the continued use of it in the solid form, as before, while there should be any portions of worm passing. In my daily calls for some days, I had the satisfaction to learn that portions of the worm continued to pass, from day to day, and sometimes several times a day.
"I now ceased to visit my little patient, intending only an oceasional visit; but my confidenee in the efficacy of the. elm bark being so well established, I advised its use to be continued for even two or three days after any portions of the worm should be seen in the evacuations. The portions of the worm expelled-even the reparate joints-were alive, showing more or less motion; a sense of their presence in the rectum, from their action, scemed to urge the patient to go to stool for their removal.
"Having given direction for the links or joints to be counted, care was taken to do so, by the mother; and from

## DR. OHASE'S REOIPES.

ny notes of the caso, I fina that during about seven weeks of the intervening time, there had been expelled, by estimate; (taking the average lengths of the joints,) about fortyfive feet of worm. At this time there had been no portions of the worm passed for two weeks, during which time the use of the bark had been omisted. The head of the worm, with about fifteen inches of the body attachod, had been expelled I But thinking that all portion of the worm or worms might not have been removed, I advised that the patient should resume the use of the bark. Very soon the next day, after doing so, further portions commenced coming away, among them one about six feet long, tapering to a thread like termination:
"The next time I took notes of the case, my estimate of the entire length of the worm that had been expelled, footed up one hundred and thirty-five feet, whether one or more worms, I am unable to say, as in the portions I saw, there were a head and tail, of what I supposed one worm. Since the last estimate, there have been joints occasionally evacuated.
"This patient, when first treated, was thin in flesh-had heen growing so for some two years-nttended with the usual nervous symptoms, starting out of sleep, variable appetite; etc., but with no.great departure from good health.
"As to, the influence of this very blank agent in the dislodgment of the tape-worm, in this case, I think there can be no doubt, whatever may be the theory of its action.
"The passage of portions of the worm, so promptly, on the use of the bark, and the ceasing to do so on the discontinuance of its use-even while active purgative anthelmintics were used-leave no room to doubt its effectiveness in at least this case as a worm expelling agent.
"It seems probable that the bark, with its thick mueilage, so interposes between the animal and the inner surface of the bowels, as to prevent its lateral grasp on their surface, in consequence of which it is compelled to yield to the foroes naturally operating, and is carried out with the discharges. But as my object was simply to state the practical facte in this case, I will offer no further reflections."

gTm $;$ kermes mineral 60 grs. ; mulphate of morphla, 8 grm ; powdered white angar, gum arable, and extract of licorice, of each $1 \frac{1}{2}$ ozs. ; oll of anice 20 drops ; Byrup of tolu sufficiont to work into mass form ; roll out and cut into 160 iozeluges. Dose to work inte
three tlmes daily.-Parish's Pharmacy.

The above is the prescription of the "regulati," bu ; there are those, perhaps, who would prefor the mor: rational jrosoription of the "irregulari," next following; avel there se those who would prefer the "Oough Uandy" iti play of eithor of the lozenges. By the insertion of the rinecy, all
can please themegres.

## 2. Oovar Lozenges.-Anotber valuable lozenge is made as fol-

 lows :-Extract of blood-root, llcorice, and black cohceh, of each 1 oz ; tinctares of ipecao and lobella, with laudannm, of each oz. ; cayenne, powdered, $10 \mathrm{gra} ;$ pulverized gum arablo and starch, of each, 8 oz ; mix all together, and aid palverized sugar 3 02s. If this shonld be too dry to roll into lozenges, add a thick solution of gum arabio to give it that consistence; and if it should be jet too moist, at any time, add more sugar. Divide into 320 lozenges. Doss-One, 8 to 6 times daily, as needed.3. Pclmonio Wafbrs.-Pulverized angar 7 ozs.; tincture of ipeano 3 drs. ; tincture af blood-root and syrup of tolu, of each 2 drs. ; tincture of thoroughwort $\$ 0 z$. $;$ morphine $1 \nmid \mathrm{grs}$. Dise soive 2 drops morphine in water 1 teaspoon, having put in sulphurio gum arabio, to form a ault, and add mucllage of comfrey root or gized wafers or lozenges. paste to roll and out into common mouth for a dose, or dissolve 8 orIONs-Allow 1 to dissclve in the and take $\frac{1}{2}$ of a spoon 6 times 6 in 3 table-spoons of warm water, 4 Corers prov Redly, or oftener if need be. and Jamaica rum, equal parionde-Reyupr,-Linseed-oil, honey, rts of each ; to be shaken when used.
This has given very genoral satisfaction in recent coughs, but the following will probably give the most general satis. faction :
4. Cough Mixture for Reoent Colds.-Tincture of blood-root, syrups of ipecac and sqriels, tincture of balsans of-tolu, and paregorio, equal parts of cach. Dose-Half of a teaspoon whenever the cough is sovero. It is a very valuable medicine.
 Uncture of opium, and tincture of tolu, of cacn + oz. ; wine of ipecac - $\frac{1}{}$ oz. oils of gultheria 4 dropn, anssafras 3 drops, and of aniseseed ofl 2 drops. The above mixture is to be put into of
lbs. of cantly which is just ready to take from the fire, continning the boiling a little longer, no ns to form into sticks.-Parish? Pharmacy.

Draggists will get confectioners to make this for a trifl in tho pound over common oandies, they, of course, furnishing their own compound.
7. Cough Synup-Wahoo, bark of the roct, and elecampane root, of each 2 ozs.; spikenard root, and tamarack bark' (unrossed, but the moss may be brushed off, of each 4 ozs. ; mandrake root ooz. ; blood-root $\frac{1}{\mathrm{ox}}$; mix alcohol 1 pt ., with sufficient water to
cover all handsomely, and let stand 2 or 3 days ; then poir off. 1 $q$ t., putting on water and boiling twice, straining the two watery and boiling down to 3 pints ; when cool add 3 lbs . of honey, ani alcoholic fluid poured off, with tincture of wine of ipecac $1 \frac{1}{2} \mathrm{oz}$. If the cough should De very tight, donble the ipecac, and wash the reet daily in warm water, rubbing thom thoroughly with a coarse Lowel, ani, twice a week, extending the washinf and rubbing to the whole body. Dose-One table-spoon 3 to 5 times daily.

If the cough is very troublesome when you lie down at night or on waking in the morning, put tar and spirits of nitre, of each one teaspoon into a four ounce vial of water, shaking well; then at these times just sip about a teaspoon from the bottle without shaking, which will allay the tiokling sensation causing the cough.

I have cured a young lady, during the past winter, with the above syrup, whose cough had been pretty constant for over two years; her friends hardly expected it ever to be any better, hyt it was only necessary to make the above amount of syrup twice to perform the cur.
8. Oough Tincture.-Tincture of blood-100t and bal-* sam of tolu, of each four ounces; tinctures of lobelis and digitalis, of each two ounces; tincture of opium (laudanum); one ounce; tincture of oil of anise (oil of anise one-half teaspoon in an ounce of plrohol) one ounce. Mix. Dose -About one-half teaspoon three times daily, in the same amount of honey, increasing to a teaspoon if needed to loosen and lessen the aigh. It has raisel eases which doctors said must dio, causing the patient to raise matter resembling the death smell, a ful indced. It will cure cough, not by stopping it, but 1 . loosening it, mesiting the lungs and throat to throw off the of anding matter which causes the cough, and thus scientifically making the cure
perfect; while most of the cough remedies kept for sale, stop the cough by their anodyne and constringing effects, retaining the mucus and all offending matters in the blood, causing permanent discase of the lungs.

But, notwithstanding the known value of this "Cough Tincture," where the tamarack and other ingredients can be oivained, I must give my preference to the "Cough Syrup," No. 7.
9. Covan Pill-Extract of hyoscyaund, balnı of gilead buds, with pulverized ipecac, or lobelia, and balsam of fir, of each $\frac{3}{2}$ oz.; oil of anise a few drops to form into common sized pills. DoseOne or two pills 2 or 4 times daily.

Dr. Beach says he endeavored for more than twenty-five years to obtain a medieine to fulfil the indications which are effected in this cough pill, particularly for ordinary colds and coughs ; and this admirably answers the intention; excelling all cthers. It allays the irritation of the mueus membrane, the bronchial tubes, and the lungs, and will bo found exceedingly valuablo in deep-seated coughs and all disoases of the chest. The bad effeets of opium (so much ised in coughs) are in this pill entirely obviated, and it is altogether better than the Cough Drops, which I now dispense with.-Beach's American Practice.
WHOOPING COUGII-SYRUP.-Onions and garlics sliced, of each 1 gill ; swect oil 1 gill; stew them in the oil in a covered dish, to obtain the juices ; then strain, and add honey 1 gill ; paregoris and spirits of camphor, of each $\frac{1}{2}$ oz.; bottle and cork tight for use. Dose-For a child of 2 or 3 years, 1 teaspoon 3 or 4 times aaily, or whenever the cough is troublesome, increasing or lessening, according to age.

This is a granny's prescription, but I care not from what source I derive information, if it gives the satisfaction that this has done upon experiment. This lady has ;aised a large family of her own children, and grand-children in abundance. We have tried it with three of our children also; and preserjbed it in nuany other eascs with satisfaction, for over seven years. - It is excellent also in common colds, atlended with much cough. :This is from experience, too, whioin $\bar{i}$ have found a very competent teaoher.

It is said that an European physician has discovered that the dangerous syinptoms of whooping cough ase due to sup.
pressed cutancous oruptions, and that an external irritant or artifivial rash, is a sure remody. Sea "Small Pox."
2. Dathey's Whoorina Cotoh Syrup.-Take the strongest West India rum 1 pt, ; anleg oll 2 ozs. ; honey 1 pt.; lemon juice 4 ozs. $;$ mix. Doss-For adults, 1 tabie-spocin 3 or 4 times a day,-children, 1 toaspooa, with an much sugar aud water.
Ho says that he has successfully trcated more than one hundred cash with this syrup.
3. Sorpness or Hoaramengs mon Covgis-Remèty--Spikenard root, brulsed and ais.jped in a teapot, by uang haif water and haif spirits ; then inballigg the ateam, whan not ioo hot, by breathing through the spout, will rellieve the soreness and toarseness of the lungs, or throat, arialing from much coughing.

## IN-GROWING TOE NAIL-To CURE. - We take the

 following remedy for $n$ very common and very painful affliotion, from tho Boston Medical and Surgical Journal:"The patient on whom I first tried this plan was a young lady who had been unable to put on a shoe for several months, and decidedly the worst I have ever seen. The edge of the nail was deeply undermined, the granulations formed a high ridge, partly covered with the skin; and pus constantly oozed from the root of the nail. The whole too was swollen and oxtremely painful and tender. My mode of proceeding was this :
"I put a very small plece of tallow in a spoon, and heated it until it became very lot, and poured it on the granalations. The effect was almont muglical. Pain and tenderness were at once relieved, and in a fow days the granulations were all gone, of the nail parts dry and destitute of all feeling, and the edge of the nail exposed so an to adint of belng pared away without
any inconvenience. The cise wes returned.
-"I have tried the plan repeatedly since, with the same satisfactory results. The operation causes bat little pain, if the tallow is properly heated. A repetition in some oases might be necessary, although I have never met with a case that did not yield to one application. It has now been proven, in many othor casen, to bo effectual, accomplishing in one minute, चrithout pain, all that can be effected by the painful applioation of nitrute of silver for several weeks."
 nils of amber and juaiper, of eash 4 oze. ; Barbadoes tar $\$$ ozs. ; $;$;
menoecs oil 1 oz. $;$ mix.

This is an old prescription, bnt it is worth the whole cost of this hook to any oue needing an application for outs, bruises, swellings, and sores of almost every description, on persons, horses, or aattlo ; so is the following also:
2. Bami of Grisad OnL-Balm of Gilead buds, any quantity; place them in a suitable dish for stewing, and pour upon them; sufficient sweet oil just io cover thera ; stew thoroughly and press out all of the oil from the buds, and bottle for use.

It will be found very valuabie es a healing oil; or lard can be used in place of the oil, making an excellent ointment for cuts, bruises, \&ic.
3. Hariei Oic, of Welce Medicamentux.-Siblimed or flowers of sulphur and oil of amber, of each 2 ozs ; linseed oil 1 lb .; spirits of turpentine suffloient to reduce all to the consistence of thin molasses. Boil the sulphur in the linseed oil natil it is dissolved, then add the oil of amber and turpentine. Dose-freia 16 to 25 drops morning and evening.

Amongst the Welch and Germans it is exicuaively used for strengthening the stomach, kidnoys, liver end lungs, aothma, shortness of broath, cough, inward or outward sores, dropsy, worms, gravel, fevers, palpitation of the heart, giddiness, headaohe, \&c., \&c., by taking it internally; and for ulcers, malignaint sores, cankcra, \&o., anoiating ex tornally and wetting linen with it and apylying to barns. In faot, if one-balf that is said of its valus is true, r. wher medisinto need ever be made. It has this much in its favor, however -probably no other medicine now in use has been in use half su long-over 160 years. The dose for a ohild is one drop for each year of its age.
4. OIL of SpIKF.-The genuine oll of spike is made from the lo. vencula spica (broad leaved lavendas), bnt the enmmercial oil of spike is made by taking the rock oll, and adding 2 ozs, of spirita of turpentine to each pint.

The rook oil whioh is obtained in Ohio, near Warren; is thicker and better than any other whioh I have ever used.
5. Blatex Ons.-Best alcohol, tincture of arnica, British oil aud oil of tar, of each 2 ors., and slovoly add sulpharic acid $1-2$ …

These black oils are getting into extemsive use as a liniment, and are ingecu vaiuajioie, especiaily in oases attended with mach inflammation.
6. Asothier Mretrod-is to take sulphurle acid 2 ozs.; nitric acid 1 on ; quicksilver 1-2 oze ; pat them togethor in a quast bottle
or in open crock until dissolved; then slowly add orre ofl sad spirits of turpentine, of cach $\frac{1}{2}$ pt., putting in the oil Arst. Let the work be done out of doors to uvoid the fumes arising from the mixture ; when all is done, bott'e and put in all the cotton clotha is will dissolve, when it is at for use.

Tho mixture becomes quite hot, although no heat is used in making it, from setting free what is called latent, or inscasible heat, by their combining together. Rev. Mr. Wuy, of Plymouth, Mich., cared himself of sore throat, by taking a few drops of this black oil upon sugar, letting it slowly dissolve upon the tongue, each eveniag after proaching, also wetting cloths and binding upon the neck. It will be necessary to avoid getting it upon cotton or linen which you would ot wish to show a stain. A colt which had a fistulous opening between the hind legs, from a snag, as supposed, whieh reduced him so that he had to be lifted "fe, when down, was oured by injecting twice only, of this oil to fill the diseased places. Also a very bad fever soro, upon the leg, ah! excuse me, upon the limb of a young lady, which baffled the scientifio skill of the town in which who lived. In case they bite too much in any of their upplications, wet a piece of brown paper in water and lay it over the parts.
OPODFLDOC-LitQUD.-Best brandy 1 qt.; warm it and add gum camphor 1 oz.; salammoniac and oil of wormwood, of cach oz. ; oils of origanum and rosemary, of each $\frac{1}{2}$ oz, ; when the oils te cissolved by the aid of the heat, add soft soap 6 ozs.
Its uses are two well known to need furtheir description.
DIARREGAS-Cordas:-The best rhubart root, pulverized, 1 zz. ; peppermint leaf 1 oz.; capsicum $\frac{1}{8}$ oz.; cover with boiling Water and steep thoroughly, strain, and add bl-carbonate of potash and essence of cinnamon, of each $\frac{1}{2}$ oz; ; with brandy (or cou Whiskey) equal in amount to the whole, and loaf sugar 4 ozs. Dos. -For an adult 1 to 2 table-spoons, for a child 1 to 2 teaspocns, (rom 3 to 6 times per day, until relief is obtained.
This preparation has been my dependencs, in my travels and in my family for several years, and it has never failed us; but in extremely bad eases it might be well to use, after ench passage, the following:
2. Injection for Cmbonto Dinrarai.-New milk, withe thick mudllage of diippory elm, of each 1 pt. ; sweet oil 1 gill ; molassem 1 pt. ; galt 1 oz. $;$ laudanum 1 ds . Mix, and inject what the bowels

Very many children, as well as grown persons die, arnu. ally of this disease, who might be saved by a proper use of the above injection and cordial. The injection should never be neglected if there is the least danger apprehended.
Although I belicre these would not fail in one ease out of one hundred, yet I have some other prescriptions which are so highly spoken of, I will give a few more. The first from Mr. Hendee, of Warsaws. Indiana, for curing Diarrhœa, or Bloody Flux, as follows:
3. Diarrega Tinctura.-Componnd tincture of myith, 6 ozs. ; tincture of rhubarb, and spirits of lavender, of each' 5 ozs. ; tincture of opium 3 ozas ; oils of anise, and cinammon, wlth gam ; camphor and tartaric acid, of each i oz. Mix. Dope-One teaspoou in $\frac{3}{3}$ a teurcup of warm water sweetened with loas sugar ; repeat after each yassage.

He says he has cured many cases after given up by physicians. It must be a decidedly good preparation. Or, again:
4. Diarriaza Drops.-Tincture of rhabarb, and componnd spirits of lavender, of each 4 ozs. ; laudanum 2 ozs. ; cinnamnn oil 2 drops. Mix. Doss-One teaspoon every 3 or 4 hours, aecording to the sefverity of the case.

## This speaks from ten years successful experience.

6. Dlarrega Syrit.-For Cases brouchet on by Lona Continutt Usk of Catcuel-Boxwood, black cherry and prickly ash barlsa, with dandelion root, of each 2 ozs. ; butternut bark 1 oz ; boil thoroughly, strain and boil down to 1 qt.; theu add loaf nugar 2 Ibs., and alcoliol 1 gill, or brandy $\frac{1}{2}$ pt. DesE-A wine-glass from 3 to 5 times daily acending to circumstances.
This regulates the howels and tones up the system at the sams time, no matter whether loose or costive. In one case of costiveness it brought a man round all right who had been sewed up tight for twelve days. On the other hand, it has regulated the system after months of calomel-diarrhoea,
7. Winterareen Brruges have been found a valuable correctoof Diarrbea brcught on by the long coritinued use of calomel in cases of fover, eating a quart of them in three days time.

The gentleman of whom I obtained this item telle me that mintergrcen essence has done the same thing, when the herries could not be obtained. In the first place, "everything else, as the saying is, had been tried in vain, and the man's wife, in coming across the woods, found these berrina
and picked them, which when the hushand saw, he cravea, and would not rest without them, and, notwithstanding the fears of friends, they cured him. Miany valuable discoveries are wade in a similar manner.
7. DEws Whortlenerrass, sieeped, and the juice dresk freely, has cured Diemicea and Bloody Mlax, both in children end ndulik.
 (it is generally kept ly Dnaget 2 as, 1 tabl 3 -spoon, steeped in half atea-cup of water.
For young chidren, in Uiarrboes, or Canker, or when they are combined, feas a teaspoon of it, or less, according to the child's age, two or thrce times daily, until cured. To overcome costiveness, which may arise from its use, scorch fresh butter, and give it in place of oil, and in quantities correspending with oil. Children have been saved with three cents worth of this bark whom "Alopath "said must lis. If gond for children, it is good for adults, by simply inceresing the dose.
9. Awhac bobs, steeped and sweetened with loaf sugar, has been fuind very valuable for Diarrhcea; adding in very severe cases, aluia pulverized, a rounding teaspoon, to 1 pt . of the Hrong tai. Dose-A tea, to a table-spoon, according to the age $Y$ the child, and severity of the case.

It saved the life of a child when two M. D.'s (Mule Driare, said it could not be saved.
CHOL ERA TINCYURE.-Select the ininnest cinnamon bark, eloyes, gum, gaviac, all pulverized, of each : oz. ; very best brandy 1 qt. Mix, and shaki occasionally for a week or two. Dosk-A teaspoon to a isble-spoon for an adult, according to the condition and robustness or strength of the system. It may. be repeated at intervals of 1 to 4 hours, if necessary, or much more often, according to the condition of the bowels.

This I have from an old railroad boss, who used it with his men during the last Cholera in Ohio, and never lost a man, whilst other jobbers left the 1, , or lost their men in abr ? ance, thinking the-above too pole to be of any value.
2. Isthmus Cholera Tincture.-Tincture of Rhubarb, cayenz: opium, and spifte of camphor, with essence, of pappinity equal parts of ecth, and each as strong as can be made. Dose-: From 5 to 30 drops, $i^{*}$ even to 60 , and repeat until relief in obtained, every 5 to 20 minutes,
O. H. Cayler, who was detained upon the Isthmus during the chole a period, was saved by this prescription, as also ras otcers.

1. Ceourers Preventive--Hoffman's auodyne and essence of poppermint, of each 2 ozs. ; tincture of ginger 1 oz ; laudanum, spirits of camphor, and tincture of cayenne, of each $\bar{z}$ oz. ; mix. Dosm-For an adult, from a tea to a table-spoon, according to symptoms.
2. Cholera Cordinl-Chloroform, spirits of camphor, landar oum rad aromatic spirite of ammonia, of each 1 dr.; oinnamun water 2 ozs. ; mix. Doss-From 1 tea to a table-spoon, to be weli shaken, and taken with sweetened water.
3. Gervin Cholera Tinctupre- - Sulphurio ether 2 ozs.; and pui it into castor and gentian, of each $\ddagger$ oz; ; opium and agaric, each 1 dri ; gum camphor $\frac{\mathrm{oz} .}{}$; let them stand 2 days, then add alcohol 1 qt., and let stand 14 days, when it is ready for use. Doss-. One teaspoon every 15 or 20 minutes, according to the urgency of

I prooured this presoription of a German at Lawrenceburg, Ind., who had done very much good with it during the last cholera period in that place.
6. Eayptun Cure for Cholera.-Best Jamaica gingér root, bruised, 1 oz, cayenne, 2 teaspoons; boil all in 1 qt. of. Water to $\frac{1}{2}$ pt., and add loaf sugar to form a thick syrup. Doss-One tablespoon every 15 minutes until vomiting and purging ceases. then
follow ap with a blackberry tea.

The foregoing was obtained of a physician who practiced in Egypt (not the Illinois Egypt) during the great devas: tution of the cholera there, with which he saved many lives.
7. India Prescription for Choosra--First disoolve gum cam. phor \& oz, in 1i ounces of alcohol. Second, give a teaspoon of spirits of hartshorn in a wine glass of water, and follow it every 5 minutes with 15 drops of the camphor in a teaspoon of water, for 3 doses, then wait 15 minutes, and commence again as before, and continue the oumphor for 30 minates, unless there is returning heat. Shonid this be the case, give one more dose and the cure is effect. ed ; let them perspire freely (which the medicine is designed to cause) as apone this the life depends, but add no additional clothing.
Lady Ponsonby, who had spent several years in India, and had proved the effency of the foregoing, returned to Dublin in 1832, and published in the Dublin Mail, for the benefit of her countryinen, declaring tiat she never knew it to fail.

I would say, be very sure sou have the oholera, as the teaspoon of hartshorn would be a double dose for ordinary cases of disease.
8. Nature's Cholera Medicine,-Laudanum, spirits of camphor, and tincture of rhubarb, equal parts of each. Dose-One tablespoon every 15 to 30 minutes until relieved.

In attacks of cholera, the patient usually feels a general uneasiness and heat about the stomach, inereasing to uctual distress and great anxiety, finally siekuess, with vomiting and purging, surface constringed, the wholo powers of the system concentrated upon the internal organs, involving the nervous system, bringing on spasms, and in the end death. Now, whatever will allay this uneasiness, drive to the surface, correct the disoliarges, and cooth the nerves, cures the disease. The laudanum does the first and the last, the eamphor drives to the surface, and the rhubarb correcte the alimentary eanal; and if accompanied with the hot bath, frietion, \&o., is doubly sure. And to show what may be done with impunity in extreme cases; let me say that Merritt Blakely, living near Flat Rock, Mich., came home from Detroit during the last cholera season, having the cholera in its last stage, that is with the vomiting, pu.rging, and spasms; the foregoing medicine being in the house, the wife, in her hurry and excitement, in place of two-thirds of a table-spoon, she read two-thirds of a tea-cup; and gave it accordingly, and saved his life; whilst if taken in the spoon doses, at this stage of the discase he would most undoubtedly never have rallied from the colapse into which: he was fast sinking; yet in the commencement they would have been as effectual; so, mistake, would be generally aceredited for saving the patient. T say Providence did the work.
Five to ten drops would be a dos or a childe 2 to 5 years, and in this dose it saved a child of $2 \frac{1}{2}$ years in a bad case of bloody dux.

If any one is permitted to die with all these prescriptions before them, it must be because a proper attention is not given; for God most undoubtedly works through the use of means, and is best pleased to see his children wear out, rather than break by collision of machinery on the way.

## COLIO AND CHOLERA MORBUC-TREATMMN.

 bile, often brought on by an over-indulgence with vegetables; especially unripe fruits; usually commencing with sickness and pain at the stomach, followed by the most excruciating pain and griping of the bowels, succeeded by vomiting and purging, which soon prostrate the patient. The person finds hituself unavoidably drawn into a coil by the contraction of the museles of the abdomen and extremities. Thirst very great, evacuations first tinged ¥ith bilo, and finally, ncarly all, very bilious.Treatment. - The difficuity al mous from the acidity of the bile then take saleratus, peppermint leaf, and rhubarb root, pulverized, of each a rounding teaspoon, pint into a cup, which you. can cover, and pour upon them boiling water $\frac{1}{2} \mathrm{pt}$; when nearly cold add a table-spoon of alcohol, or twice as much brindy or other spirits. : Dose-Two or 3 table-spoons every 20 or 30 minntes, as often and as long as the vomiting and prinful purgations continue. If there slould be long continued pain about the navel, use tho "injection" as-mentionod under that head, in connection with tho above treatment, and you will have nothing to fear. If the first dose or two should be vomited, repeat it immediately,
until retained.

The above preparation ought to be made by every family, and kept on hand by bottling; for diseases of this character are as Eable to come on in the night as at ary other time ; then much time must be lost in making fires, or getting the artieles together with which to make it.
2. Common Colio. There is a kind of colic whioh some persons are afflicted with from their youth up, not attended with vomiting or purging. I was afflicted with it from my earliest recolloction until I was over twenty years of age, sometimes two or three times yearly.
In one of these fits, about that age, a neighbor woman came in, and as soon as she found ont what was the matter with me, she went out and pulla up a buncb of blue vervain, knocked the dirt from the roots, then cut them and put a good handful of them into a basin, and poure ${ }^{2}$ ling water upon them, and steeped for a short time, poured out a saucer of the tea and gave me to drink, asking no questions, but simply saying: "If you will drink this tea every day for a month, jou mil inever huve collo again as long as you live." I drank it, and in 15 minutes I was perfectly happy; the transition from extreme pain to immediate and perfect rellef, is too g ceat to allow one to find words adequate to describe that differenct.

I continued its use as direoted, and have not had a colie pain since, nearly thirty years. I have told it to others, with the same result. It also forms a gonit toris !-aguee, and after fevers, \&co.

OARMINATIVES.--For the more common pains of the stomach, arising from accumulating gas, in adults or children, the following preparation will be found very valuable, and much bettar than the plan of resorting to any of the opium mixtures for a constant practice, as many unwisely, or wiokedly h.. See the romarks after "Godfrey's Oordial," and through this subject.

## Compoupd spirits of lavender, spirits of camphor, and tinoture

 of ginger, of each 1-2 oz; sulphurlo ether and tincture of cayenne, of eall, 1 teaspo. Mix, and keep tightly corked. Dose-For an 2 years, 5 drops every 15 minates, until relieved; for a child of neverity of the pain.2. Capionatipy por Cimprev.-Angelica and white roots, of each 4 ozs, ; valerian and sculcap root, with poppy heads, of each 2 ozs.; sweet flag-ropt oz. ; anise, dill, and fennel seed; with catmint leaves and flowers, motherwort and mace, of each 1oz; castor and cochineal, of cach $1-2 \mathrm{oz}$.; camphor gum 2 scruwater, of each 1 la (called fowers of ben:oin) $\frac{1}{4}$ oz. ; alcohol and sugar 1lb. Palverize all ram, and brandy 2 qts.; loaf or crushed and place in a suitably sized be herbs end roots, moderately fies, and water, and keep warm for adelicy the eppifits, or alcohol avery day; then filter or strain, week, shaking once or twice soin, shaking well; now dissolve the sinar in another and benwater, by heat, and add to the spirt' sugar in another quart of Doss-For a yary young child, from 3 to 5 , and all is complete. about 10 drops, and from that up to 1 tenspo drops; if 1 year old, ce. For adults, from 1 to 4 tearo of the pain-to be taken 4 teaspoons, according to the weverity adalts, and in a spoin of the a cup of catmint or caimip tea for overy 2 to 6 hours, as needed.

Usys.--It eases pain, create3 a moder: a apputite and perspiration, and produces refreshing sleep; is also ezoellent for whoving flatulence or wind oolic, and valuable in hrsteria and other nervous affections, female debility, \&o., in place of the opium anodynes.

- SEDLITZ POWDERS.-GENUNE-Rncholle alltis 2 cins. put tartaric acid 35 gra . into a phite these into a blue paper, and pat tartaric acid 35 gre. into a white paper. To use, put each
tino
membrane disappears usually within two days, and the patient overcomes the malignant tendency of the disease.
"The foregoing doses are for adults, for children they should of course be diminished according to ago, \&o. It will be observed that great importance is attached to the frequent use of the gargle-that is every hour-in order to overoome the morbific tendency of disease by a constantly connteracting impression. In order to guard against a relapse, an occasional use of the remedies should be continued for several days after the removal of the membrane and subsidence of unpleasant symptoms. To complete the cure; ${ }^{\text {a }}$ generous diet and, other restoratives may be usod, as the intelligent practitioner shall direct."

CATHARTICS-Vigetable Pirysic.-Jbnop and peppérmint leaf, of each 1 oz . ; senna 2 ozs.; pulverize all very finely, and aift through gazze, bottle it and keep corked. Dosm-Put a rounding teaspoon of the powder and a heaping teaspoon of sugar into a cup, and pour three or four spoons of boiling water upon them; when cool stir it np and drink all. The best time for taking it is in the morning, not taking breakfast, but drinking freely of cornmeal gruel. If it does not operate in 3 hours, repeat the dose until a free operation is obtained.

Dr. Beach first brought this preparation, nearly in its present proportions, to the notice of the Eclectio practitioners, who have found it worthy of very great confidence, and applicable in all cases where a general cathartic action is required. It may be made into syrup or pills, if preferred.
2. Indian Uatmartio Pills.-Aloes and gamboge, of each 1 oz .; mandrake and blood-root with gum myrrh, of each $\ddagger 0$ oz ; gum camphor and cayenne, of each $1 \frac{1}{2}$ drs. ; ginger 4 ozs . ; all finely. pulverized and thoroughly mired, with thick macilage (made by putting a little water upon equal quantities of gum arablo and gum tragacanth, into pill mass ; then formed into common sized pills. Dosw-Two to four pills, according to the robustness of the' patient.

Tamilies should always have some of these cathartios, as well as other remedies, in the house, to be prepared for accident, providence, or emergence, whichever you please to call it. They may be sugar-coated, as directed under that head, if desired.

TOOTHACHE AND NETRALGIA REMEDIES.-MAGNETIO Touti Cordill and Pan Kilher. - Best alcohol 1 oz.; l.aưarnm 1 oz ; chloroform, liquid measure, $\frac{5}{\mathrm{~b}}$ oz. ; gum cam-
ph
phor $\}$ oz ; oil of cloven $\frac{1}{2 r}$; sulphuric ether a oz ; and oll of lavender 1 dr . If there is a nerve exposed this will quiet it. Apply with lint. Rub also on the gums and upon the face against the tooth, ireely.
"The raging coothache why now eldure, when there ta found a perfect care, Which saves the tooth anit stopil the pain, and givo the sufferer ease agaln."
In the case of an ulcerated tooth at Georgetown, Ohio, Mr. Jenkins, the proprictor of the "Jenkins' House," had been suffering for eight days, and I relioved him by bathing the face with this preparation, using a sponge, for two or three minutes only, taking a teaspoon or two into the mouth, for a minute or two, as it had broken upon the inside. The operation of the cordial was really magioal, according to old notions of cure.

I offered to scell a grooer a book, at Lawrenceburgh, Ind. He read until he saw the "Magnetic Tooth Cordial" mentioned, then he says, "If you will oure my toothache, I will buy one." I applied the cordial, it being late Saturday evening, and on Monday morning ha was the first man on hand for his book.

The Sheriff of Wayne Co., Ina., at Centreville, had benn suffering three days of ncuralgiu, ard I gave him such decided relief in one evening with this cordial, that he gave me a three-dollar piece, with the remark, "Take whatever you please."
In passing from Conneatville, Pa., upon a canal boat, the cook (whe was wife of one of the steersmen), was taken, after supper, with severe pain in the stomach. There being no peppermint on board, and as strange as it may appear, no spirits of any kind whatever; I was applied to as a physician to contrive something for her rolief'; I ran my mind over the artioles I had with me, and could not hit upon any 'other so likely to benefit as the "Tonth Ccadial," arguing in my mind that if gond for pain where it could be applicd to the spot externally, I could apply it to the point of pain internally in this case (the stomach), as well. I gave her a teaspoon of it in water, and waited five minutes without relicf, but concluding to go "whole hog or none," I repeated the dose, and inside of the next five minutes she was pericetiy cured. Iifer husbunci, the other steersman aiso, and onc of the drivers, bought each a book, and the noxt week, in Erie, one of hes neighbors bought another, upon

- her recominendation; since which myself and agents have freely used it, and recommend it for similar conditions with equal suceess.

The cases are too numerous to mention more. I mention these to give confidence to purchasers, that all, who need it, will not fail to give it a trial. It is good for any local pain, its use.
2. Номeopathio Tooti Compiat,-Alcohol $\frac{1}{\frac{1}{2}}$ pt.; tincture of upply as the other.

There are many persons who would prefer this last to the foregoing from the presence of arnica; and it is especially valuable as a liniment for bruises invoiving effusion of blood under the skin.
3. Necralgla-Itrikal Remeip.-Sal-ammoniae $\frac{1}{}$ dr. ; dissolve in water 1 07, Dose-- ()ne table-spoon every three minutes for 20 minutes, at the end of which time, if not before, the pain will have disappeared.

The foregoing is from a gentleman who had been long afflicted with the discase, who found no success with any other renredy. Instead of common water, the "Camphor Water" or "Mint Water" might by some be preferred. The ammonia is a very diffusable stimulant, quickly extending to the whole system, especially tending to the sur: faco.
4. King of Oits, for Nevmalala and Refematism.-Burning fluid 1. pt. ; oils of cedar, hemlock, sassafras, and origanum, of each 2 ozs. ; earbonate of amrionia, pulverized, 1 oz.; mix. : Directions. -Apply freely to the nerves and gums, around the tooth; and to the face, in neuralgic pains, by wetting brown paper and laying on the parts, not too long, for fear of blistering, -to the nerves of teetl by lint.

A blacksmith of Sturgis, Mich., cared himself and others, with this, of neuralgia, after physicians could give no relief.
5. Several years ago, I was stopping for a number of weeks at a hotel near Detroit; whilst there toothache was once made tho subject of conversation, at which time the landlady, a Mrs. Wood, said she had beon driven by it to an exireme measure-no less than boiling wormwood herb in alcohol and taking a table-spoon of it into the mouth
boiling hot, immediately olosing thouth, turning the head in such a way as to bring the : hol into oontact with all of the teeth, then spitting it out, daking the second immediately, in the same way, having the boiling kept up by sitting the tin containing it on a shovel of hot coals, bringing it near the mouth. She said she nevor had toothache after it, nor did it injure the mouth in the least, but for the moment she thought her head had collapsed, or the heavens and earth come together. And although the lady's appearance and deportment were sush as to gain general esteem, I dared not try it, or recommend it to others. But during the last season I found a gentleman who had tried the same thing, in the same may, except he took four spoons in his mouth at a time, and did not observe to keep his mouih closed to prevent the contact of the air with the alcohol, the result of which was a soalded mouth, yet a perfeet cure of the pain, and no recurrence of it for twelve years up to the time of conversation. And I do not now give the plan, expecting it to become a general favorite, but more to show the severity of the pain, forcing patients to such extreme remedies. It would not be applicable.only in cases where the pain was confined entirely to the teeth.
6. Horsiatsingeri Root, bruised, and bound upon the tace, or other parte where pain is located, has been found very valuablo for their relief. And I think it better than the leaf for drafts to the feet, or other parts.
7. Teeti Extracicing with Lititle or no Pain.Dr. Dunlap, a dentist of Chillicothe, O., while filling a tooth for me, called my attention to the following recipe, given by a dental publication, to prevent pain in extracting teeth. He had used it. It will be found valuable for all who must havo teeth extracted, for the feeling is sufficiently unpleasant even when all is done that can be for its rolief:

[^7]
## 188

## DR. OHASE'S RECIPES.

My vife has had six teath taken at a sitting, but the last
two she wished to have out, she could not make up her aind to tho work until I promised her it should not hurt in the extraction, which 1 accomplished by accompanying her to Dr. Porter's dental office, of this city, and administering chloroform in the usual way, just to the point of nervous stimulation, or until its effeets were felt over the whole system, at which time the teeth were taken, not causing pain, she says, equal to toothache for one minute. Not the slightert inconvenience was oxperienced from the effects of tho ohloroferm. I consider this plan, and so does Dr. Porter, far preferable to administering it until entire stupefaction, by which many valuable lives have been lost.
8. Deatrifich wilig Removis Thetareocs Adeesions, Arrests Decay, and Indecka a Healtiy Action of the Gems.-Dissolve

App the I pape I wi der dam the othe
E
use
them
of $t]$ that 1 ounce of borax in $1 \frac{1}{2}$ pints of boiling water, and when a little cool, add 1 teaspoon of the tlucture of myrrh and 1 table-spoon of the spirits of camplior, and bottle for use. Directions.-At bedtimo, wash out the mouth with water; using a badger's hair brush (bristle brushes tear the gums and should never be used); then take a table-spoon of the dentrilice with as much warm water, and rub the teeth and gums well each night until the end is attained.
9. Tomit Wabl-To Remove Brackess.-Pure muriatic acid 1 oz.; water 1 oz ; honcy 2 ozs. ; mix. Take a tooth brush and wet it freely with this prepiration, and briskly rub the blaok teeth, and in a moment's thme they will be perfectly white ; then immediately wash out the mouth with water, that the acid may not act uron
the enamel of the teeth.

It noed not be used often, say oneo in three or four months, as the tecth bcoome blaek again, washing out quickly every time. Without the washing after its use, it would injure the tecth, with it, it never will. This blackness is hard to remove, even with tice brush and tooth powder.
10. Dr. Thompson, of Evansville, Ind., gives the above in twenty drop doses, threo times daily, for laryngitis of bronchitis, taken in a littlo water, throwing it back past the teeth.
11. Toomi Powdri-Hxcmlanst-Take any fuantity of fäiy pairenizen ciulis, and twles as much fluely pulverized charcoal; make very fino; thesi udd a very little suds made with Castile sonp, and sublicifal spiritu of camphor to wet all to a thick piste.

c acid 1 and wet eth, and ediately et upon
four ghout use, it blacktooth above itis or ast the
finciy arcoal; Castile pisto.

Apply with the enger, rubbing thoroughly, and it will whiten the teeth better than any tooth powder you can buy.

I noticed the past season, a piece going the rounds of the papers, "That charcoal ought not to be used" on the teeth.". I will only add that a daughter of mine has ased this powder over six years, and her teeth are very white, and no damage to the enamel, as yet. Six years would show up the evil, if death was in the pot. Coal from basswood or other soft wood is the easiest pulverized.

ESSENCES.-Druggists' rules for making essences is to ase one ounce of oil to one quart of alcohol, but many of them do not use more than half of that amount, whilst most of the pedlars do not have them made of over ore-fourth that strength. I would hardly set them away if presented. I have always made there as follows:
Peppermint oil 1 oz.; best alcohol 1 pt. And the same amount of any other oil for any other essences which you desire to make. Dose- A dose of this strength of essence will be only from 10 to 30 drops.
With most essences a man can d-ink a whole bottle without danger, or benefit. Peppermint is colored with tincture of tumeric, cinnamon with tincture of red sandal or sanders wood, and wintergreen with tincture of kimo. There is no color, however, for essences, so natural as to put the green leaf of which the oil is made into the jar of essence, and let it remain over night, or about trelva hours; then pour off, or filter if for sale. But if families are making for their own use they need not bother to color them at all. But many beliove if they are high onlored they are necessarily strong, but it has no offect upen the strength whatever, unless colored with the leaf or hark, as here rcoomemended. Cinnamon bark does in plase of the leaf. See " Extracts."

TINCTURES.-In making any of the tinctures in common use, or in making any of the medicines called for in this work, or in works generally, it is not only expected, but. absolutely necessary, that the roots, lenvea, horles, fen, should be dry, unless otherwise directed; then :
Take the root, herb, bark, leaf or gum called for, 2 ova; and
bruise it, then pour boiling water $\frac{\text { ght }}{\text { pt, upon it. and when }}$ jold
add best alcohol $\frac{1}{2} \mathrm{pt}$., keeping warm for from 4 to 6 days, or letting it stand 10 or 12 days without warmih, shaking once or twice daily; filter or strain; or it may stand upon the dregs and be carefully poured off as needed.

With any person of common judgment, the foregoing directions are just as good as to take up forty times as much space by saying-take lobelia, herb and seed, 2 ozs. ; alcohol $\frac{1}{2}$ pt.; bolling water $\frac{1}{2}$ pt., -then do the same thing, over and over again, with every tincture whieh may be called for or at least those who cannot go ahead with the foregoing instructions, ure not fit to handle medicines at all ; so I leave the subject with those for whom the given information is sufficient.

In makiing compound tinctures, you can combine the simple tinctares, or make them by putting the different articles into a bottle together, then use the alcohol and water it would require if you were making each tincture separa'ely. TETTER, RINGWORM, AND BARBERS' ITCH-To CURE.Take the best Cuba cigars, smoke one a sufficient length of time to accumulate $\frac{\text { or }}{\frac{1}{2}}$ inch of ashes upon the end of the cigar ; now wet the whole surface of the soro with the saliva from the mouth, then rub the ashes from the end of the cigar thoroughly Into, and all over the sore ; do this three times a day, and inside of a week all will be smooth and well.
I speak from extensive experience; half of one cigar cured myself when a barber would not undertake to shave me. It is equally successful in tetters on other parts of the body, hands, \&c.

Tobaceo is very valuable in its place (medicine)-like spirits, however, it makes slaves of its devotees.
2. Narrow-Leaved (yellow) dock root, sliced and soaked in good vinegar, used as a wash, is lighly recommended at a cure for tetter, or ring-worm.
balsams-Dr. R. W. Hotciris' Indian Mearina, formerly

## with

lump

ers in
SN alding spirits of turpentine 1 qt ; balsam of toln 1 oz ; balbam of fir 4 ozs.; oil of hemlock, origanum with Venice turpentine, of each 1 oz . $;$ sirained honey, 4 ozs. ; mix well, and bottle. Dose-Six to 12 drops ; for a child of six, 3 th 6 drops, on a little sugar. The dose can bo varled acoordiug to the

It is a valuable preparation for coughs, internai naires, iy Wrains, and works benignly upon the kidneys,
2. Dootor Mitchet.'s Balsam, for Cuts, Brutseg, da-Feaugreek seed and gum myrrh, of each 1 oz ; sassafras root bark, a good handful; alcohol 1 qt . Put all into a bottle, and keep warm for 5 days.

Dr. Mitchel, of Pa., during his life, made great use of this balsam for cuts, bruises, abrasions, \&o., and it will be found valuable for such purposes.
ARTIFICIAL SKIN-For Bcris, Brutigé, Abrasions, \&o., Proom Againgt Water.-Take gun cotton and Venice turpentine, eqial parts of each, and dissolve them in 20 times as much snlpharie ether, dissolving the cotton first, then adding the tarpentive ; keep it corked tightly.

The object of the turpentive is to prevent pressure or pinching caused by evaporation of the ether when applied to a bruised surface. Water does not affect it, hence its value for cracked nipples, chapped hands, surface bruises, etc., eto.
DISCUTIENTS-To Soatter Swelunvas.-Tobacco and cicuta (water hemlock) leaves, of each 2 oz .; stramonium (jimpsom), and solanum nigrum (garden night shade, sometimes erroneously called "deadly" night shade), the leaves, and yellow dock root, of each 4 ozs.; bittersweet, bark of the root, 3 ozs. Extract the strength by boiling with water, pressing out and reboiling, straining and carefully boiling down to the consistenoe of an ointment, then add lard 18 ozs., and simmer together.

It will be used for stiff joints, sprains, bruises attended with swolling when the skin is unbroken, for cancerous lumps, scrofulous swellings, white swellings, rheumatio svellings, sco. It is one of the best disoutients, or scatterers in use, keeping cancers back, often for months.

SMall POX-To Prevent Pitting the Face.-A great discovery is reported recently to have been made by a surgeon of the English army in China, to prevent pitting or marking the face. The mode of treatment is as follows:
When, in small-pox, the preceding fever is at its height, ind just before the eruption appears, the chest is thoroughly rubbed with Croton Oil and Tartaremetic Ointment. This causes the Whole of the eruption to appear on that part of the body, to the relief of the rest. It also secures a full and completo ernytion,
 This is said to be now the extablished mote of treatment in the English army ${ }^{3}$, China, by general ordors, and is regard 1 as pearfoctiy effectual.

## Dr. ohase's reotips.

It is a well known fact, that disease is most likely to make its attack upon the weakest parts, and especially upon places in the system which have been recently weakened by previous disease; hence, if an eruption (disease) is caused by application of croton oil mized with a litile of the Tartaremetic Ointment, there is every reason to believo thut the eruption, in small pox, will locate upon that part instead ci tho faee. The application should be made upon the posture upon the bed.

It has been suggested that a similar application will relieve whooping cough, by drawitg the irritation from the lunga; if ao, why will it not help to keep measles to the surface, especially when they have a tendency to the internal organs, cailsd, striking in. It is wurth a trial, in any of these cases. See "Causes of 1 nffamination," under the
2. Common Sweriunges, to Redoca.-Tory-weed pounded so as to mash it thoroughly and bound apon any common swelling, will very soon reduce the parts to their natural size.

This weed may be known from its annoyance to sheep raisers, as it furnishes a small burr having a dent on one side of it. There are two species of it, but the burr of the other kind has no dent-is round. It will be found very valuable in rheumatism attended with swellings.
WENS-To CORE,-Dissolve copperas in water to make it very strong; now take a pin, ncedle, or sharp snife anil prick or cut the wen in about a dozen places, just sufflient to cause it to bleed; then wet it thoroughly with the copperas water, once
daily
This followed ior four weeks, cured a man residing within four miles of this city, who had six or eight of them, some of them on tite head as large as a hen's egg. The preparar tiol is also valuable as a wash in erysipeles.
BLEEDINGS-Internal and External-Styptia Balsam.-For internal hemorrlage, or bleeding from the lungs, stomach, uose, and in exeessive menstruation or bleeding from the womb is made as follows:
cont bott colo prle, 40 d of $b_{1}$ and use pear: is to

continue to stir as long as any fumes arise from the mixtare, then bottle In glass, ground stoppered, bottles. It should be a clear red color, like dark blood, but if mado of poor materials it will be a prle, dirty red, and unft for use. Dose-To be given by putting 40 drops into a teacup and rubbing it thoroughly with a teaspoon of brown sugar, and then stir in water until the cup is nearly full, and drink immediately-repeat every hour for 3 or 4 hours, but 1ts use should be discontinued as soon as no more fresh blood anpears. Age does not injure it, but a skin forms on the top which is to be brokeu through, using the medicine below it.

This preparation was used for thirty years, with uniform ssuccess, by Dr. Jas. Warren, beforo he gave it to the public; since then, Dr. King, of Cincinnati, author of the Eccletie Dispensatory, has spread it, through that work, and many lives have been saved by it. It acts by lessening the foree of the circulation (sedative power), as also by its as tringent effeets in contact with the bleeding vessels. And the probability is that no known remedy can be as safely depended upon for more speedy relief, or certainty of cure, especially for the lungs, stomach, or nose; but for bleedings from the womb, or excessive menstruation, I feel to give preference to Prof. Platt's treatment as shown in the recipefor "Uterine Hemorrhages." No relaxation from businese need be required, unless the loss of biood makes in necessary, nor other treatinent, except if blood has been swallowed, or if the bleeding is from the stomach, it would be well to give a mild cathartic. Blceding from the stomach will be distinguished from bleeding from the lungs by a señse of weight, or pain, and unaccompaied by cough, and discharged by vomiting, and in larger quantities at a time than from the lungs. The blood will be darker also, and often mixed with partieles of food.

Exereise in the open air is preferable to inacrivity; and if any symptoms of retarning hemorrhage show themselves, begin with the remedy without ooss of time and a reasonable hope of cure may be expected.
2. Exthrnal Strptio Remediss - Take a glazed earthen vessel that will stand heat, and put into it water $2 \frac{1}{2}$ pts. ; tincture of beuzoin 2 ozs ; alum $\frac{1}{} \mathrm{lb}$., and boil for 6 hours, replening the whioz which evaporates in boilimg, by pouring in bolling water so as not to sinn the bolling process, gowatanty stirring. At the and of the six nours it is to bo filtered, or carefuliy strained and bettled, also in glass ktoppered betilea. Aprioution-Wet lint

and lay apon the wonnd, binding with bandages to provent the thickened blood (coagula) from being removed from the mouthr ot the versels, keeping them in piace for 24 to 48 hours will be

If any doubt is felt about this remedy, pour a few drops of it into a ressel containing human blood-the larger the quantity of the styptic the thicker will be the blood mass, until it becomes black and thick. Pagliari was the first to ${ }^{3}$ introduce this propge tion to publio notice.-Eclcctic Dis. pensatory.
3. Styptio Tincture--External Application-- Lest brandy 2 ozs ; finely scraped U'astile soap 2 drs. ; potash 1 dr . ; mix all and shake well when applied. Apply warm by putting lint upon the crat, wet with the miature.

I have never hal oceasion to try either of the preparations, bat ir I do it will be the "Balsatn," or "External Styptio" first, and in' they should fail I would try the "Tinoture," for I feel that it must stop blood, but I also an certain that it would muke a sore, aside from the eut; yet, better have a sore than luse life, of course. These remedies are such that a physician might pass a lifetime without oo. casion to use, but none the less important to know.
broncliogele-Exlaraed Neck-To Cure.-Iodine of potasslimm (often called hydriodate of potasb) 2 drs. ; indine 1 dr. ; water 24 ozs, ; mix and shate a few minntes, and pour a little into a vial for intermal 1 ges. Doise-Five to 10 drops before cach meal, to be hikinh in a iltile water. Exteradl Application.- With a fiather until well.
It will canse the searf skin to peel off several times before the cure is perfect, leaving it tender; but do not omit the application more than one day at most, and you may rest assured of a cure, if a cure can be performed by any means whatever; many cures have been performed by it, and there is no medicine jet disoovered which has proved one-hundredth part as successful.
2. Ber it jou are willing to de ionger in pertorming tne cure, wo ovold the sorenoss, dissolve the same articles in alcoliol 1 pt., and use tine same way, as aidove cescridea, (i. e.) noin internal ana
 guaiac 1 oz.; gums myrrh and camphor, and cayenne pulver. ted, of each $\frac{1}{2} \mathrm{oz}$; mix. Shisks occasionally for a weel or

10 days and let 几ilter and settle for use. Apply freely to suffice pains, or it may be taken in teaspoon doses for internal pains, and repeat according to necessities.

If any one can tell it from its namesake, by its looks or actions, we will then acknowledge that the old minister, from whom it was obtained, was greatly deceived, althongh he was perfectly familiar for a long time with Mr. Davis, and his mode of prepuring the pain-killer.
POISONS-Avridorre.-When it becomes known that a poison had been swallowed, stir salt and ground mustard, of each a heaping teaspoon, into a glass of water, and have it drank inmediately. It is the quickest emetic known.

It should vomit in one minute. Then give the whites of two or three oggs in a cup or two of the strongest coffee. If no coffee, swallow the egg in sweet cream, and if no cream, sweot milk, if neither, down with the egg.
1 have used the mustard, with success, in the case of my own child, whioh had swallowed a "Quarter" beyond the reach of the finger, but remaining in the throat, which to all appearances, would soon have suffocated him. I first took "granny's plan" of turning the head down and patting on the back; failing in this, I mixed a heaping teaspoon of mustard in sufficient water to admit its being swallowed readily; and in a minute we had the quarter, dinner, and all; without it, we should have had no ohild.

I knew the mustard to work well once upon about twenty men in the boat-yard, on Belle River, Newport, Mich. I had been furnishing them with "Switohel" at twenty cents per bucket, made by putting about a pound of sugar, a quart of vincgar, nnd two or three table-spoons of ginger to the bucket of water, with a lump of ice. An old man, also in the grocery business, offered to give it to them at eighteen pence per bucket, but by some mistake, he put in mustard instead of ginger. They had a ganeral vomit, which made them think that Cholera had come with the horrors of " Thirty-Two," but as the downward effects were not experienced, it passed off with great amnsement, safoly establishing my custom at the twenty cents per bucket.
IFनLAMMMATORY DISEASES-Drsuripion.-Ba fore I attempt to speak of the iuflammation of particul organs, I ahall make a few remarks upon the subject in ghe.
eral, whinh will throw out the necessary light for those not already informed; and I would be glad to extend my treatment to all of the particular orgars of the body, but the limits of the work ouly allows me to speak of Pleurisy, Inflammation of the lungs, \&c., yet, Eclectic ideas of inflammation are such, that if we can successfully, treat inflammation in one part of the system (body), we can, with but little modification, succeed with it in all its forms. "And my gencral remarks shall be of such a nature as to enable any judicious person to, successfully, combat with inflammations in every part of the system. Then :
Frist:-Inflampation is, generally, attended with pain, increased heat, redness, and swelling. Some, or all of these signs always accompany it, according to the structure of the organs affected.
SECOND. -The mow be the structure of the organ, the less severe will bot thain; and the character of the *tructure also modifing the character of the pain. In mucous thembranes, it is burxidy or stinging. In sevous membranos it is lancinating, and most usually very sharp and cuiting. In' jilrous structures it is dull, aehing, and gnawing." In nervous structures, it is quick, jumping, and most usually excruciatingly severe; and in nearly all structures mure or less soreness is soon present.

Tuird.-To make the foregoing information of value, it becomes necessary to know the structure of the various parts of the system. Although the ultimate portions of muscle or flesh, as usually called, is fibrous, yet there is a loose cellular structure blended with it, which fills up and rounds the form to its graceful beauty-hence, here, we have more swelling, and less severity of pain. With the rose, or red of the lips, commences the mucous membrane, which forms the lining coat of the mouth. stomach, \&c., through the whole alimentary canal, also lining the uretha, bladder, ureters, vagina, womb, fallopian tubes, \&e., hence the heat always felt in inflammation of these organs. The whole internal surface of the eavity of the body is lined by a serous nembrane, which is oleo reffected or folded upon We lungs-hore called pleura (the side), henoe mleurisi (inflammation of the pleura or (wide); and also folded upon

pain, of these of the of the nucous branes ating. 5. In isually ore or
value, arious ins of 3 is a 3 and e , wेe the rane, \& 80 ., etha, rence The d by upon arisy apon
the upper side of the diaphragm; the diaphragm forming a partition between the upper and lower portions of the carity of the body, tho upper portion containing the lungs, heart, arge blood vessels, \&o., called the chest, more commonly the breast-the lower portion containing the stomach, liver, kidneys, intestines, bladder, \&c., called the abdomen-more commonly the bowels. The sides of the abdomen are corered with a continuation of this serous membrane, which is also reflected upon the lowe side of the diaphragm, liver, stomach, small and large intestines, bladder, \&c.,-here called peritoneum (to extend around), in all places it secretes (furnishes) a moistening fluid enabling one organ of the body to move upon itself or other organs without friction. Thie serous membrane is thin, but very firm, hence tha sharpness of the pain when it is inflamed, as it cannot yiel to the pressure of the accumulating blood.

Fourtir.-The ligaments or bands which bind the differe ent parts of the body together at the joints, and the gracefully contracted ends of the museles (called tendons) whioh pass the joint, attaching themselves to the next bone above or below, and the wristlet-like bands which are clasped around the joints through which these tendons play, as over a pully, when the joint is bent, are all of a fibrous construction, hence the grinding or gnawing pains of rheumatism (inflammations), and injuries at or near joints, and it also accounts for that kind of pain in the latter stages of intestinal inflammations, as the stomach, intestines, \&o., are composed of three coats, the external, serous-middle, fibrous; internal, mucous, and when inflammation of the external, or internal, coats aro long continued, it generally involves the middle思-fibrous layer.

FIfrif.-The greatest portion of the substance of the lungs is of fibrous tissue, consequently, dull or obtuse pain only, is experienced when inflamed.

Lastly.-The nervons system, although of a fibrous charecter, is so indeseribably fine in its structure that, like the telegraph wire, as soon as touched, it answers with a bound to the call; quick as thought, whether pain or pleasaro, jumping, bounding, it goes to the grand citadel (the brain) which overlooks the wolfare of the Frande templele.

## IMAGE EVALUATION TEST TARGET (MT-3)

## di. orase's reotima

In general, the intensity of the pain attending inflammetions will surely indicate the violence of the febrile (sympathetic) reaction; for instance, in inflammation of the bronchial tubes, the pain is not very severe, consequently not much fever (reaction); but in inflammation of the pleara (plearisy) the pain is very severe, consequently the febrile reaction is exceedingly great.

Causes of Inflammation.-In health the blood is, carried evenly, in proportion to the size of the blood vessels, to every part of the body. And the vessels (arteries and vcins) are proportioned in size to the necessity of the system fo: vitality, nutrition and reparation. Whatever it may be that causes the blood to recede from the surface, or any considerable portion of it , will cause inflammation of the weakest portion of the system; and whatever will draw the blood unduly to any part of the system, will cause inflamm2tion of that part,-for instance, cold drives the blood from the surface, consequently, if sufficiently long continned, the internal organ least able to bear the accumnlation of blood upon it will be axcited to inflammation-a blow upon any part, if sufficiently severe, will cause inflammation of the injured part. Also mustard poultices, drafts to the feet, \&c., hence the propriety of their proper use to draw the blood away from ivternal organs which are inflamed. A check of perspiration is, especially, liable to excite inflammation, and that in proportion to the degree of heat producing the perspiration and the length of time which the person may be exposed to the cold. The object of knowing the cause of disease is to avoid suffering from disease, by keeping clear of its cause; or thereby to know what remedy to apply for its cure or relicf.

There is a olass of persons who clain that oauses will havt thieir legitimate effects, physical or moral ; physicians know that it is absurd physically; that is, when philosophically. and scientifically combated with,-for instance, a person is exposed to cold; the blood is driven in upon the internal organs, and the one which is the least able to bear the preszure gives way before the invading enemy, and an infammtion is the result; which, if left to itself, will terminate in death; but heat and moisture are applied to the constringed. aurfuco-the blood is bror cu baok and held there, and a
cure the

Infil tion, o return may b membr blood 1 form as parts fact th never, any pa tomacl stantly *rgans ; any oth are forn ppon the uloers, 0
cure is speedily effected-the natural or physical effect of the cause is obviated or avoided.

Then why should it be thought impossible with God that a moral remedy should be provided against moral evils? Thanks be to God, it has been provided to the willing and obedient, ilhrough our Lord Jesus Christ, but only to tho willing and obedient, morally as well as physically, for if a person will not permit a proper course to be pursued to overcome the consequences arising to his body from cold, ho must suffer, not only the inflammation to go on, but also guilt of mind for neglecting his known duty. The same is true in either point of view, only it looks so curious that there should be those who can reason of physical things, but utterly refuse to give up their moral bliriness; ibe consequences be upon their own heads.

Just in proportion to the susceptibili, of an organ to take on diseased action, is the danger of exposure; for example, if a person has had a previous attack of pleurisy, or inflammation of the lungs, those organs, or the one whioh has been diseased, win be almost certain to be again prostrated, usually called relapse; which is in most cases, ten times more severe than the firstwattack; then be very oareful about exposures when just getting better from these, or other disease.

Inflammation terminates by resolution, effusion, suppuration, or mortification. By resolution is meant that the parts return to their natural condition; by effusion; that blood may be thrown out from the soft parts, or from mucous membranes-that lymph, or serum, a colorless part of the blood may be thrown out by serous membranes, which often form adhesions, proventing the after motions of the affected parts-and here what wisdom is brought to light, in the fact that whatever is thrown out from the mucous surface never, or at least very seldom adheres or grows up; if it did, any part of the alimentary oanal from the mouth to the stomach, and so on through the intestines, would be constantly adhering; so, aiso; or the luags; for ihese various organs are more frequently affected by inflammations than any other parts of the body-iy suppuration, when al reses are formed containing pus (matter), or this may take place ppon the surface, when it is usually called canker, or corroding ulcers, oancers, de.; by gavigrene (mortification) Whem death
of the parts takes place ; in this case, if the part is sufficiently extensive, or if it is an internal part, death of the whole body, if not relieved, is the result.

The methods of inflammatory termination is belioved $t$, result from the grade of inflammation-for instance, at the circumference of a boil, the inflammation is weak, serum is thrown out; near the centre, where the inflammation is a little higher, lymph is poured out and adhosion takes placo; -next pus--at the centre mortification and consequent sloughing takes place.

In boils, the tendency is to wappuration; in carbuncles, the tendency is to mortification; but in rhoumatism, mumps, \&o., there is a strong tendency to resolution; and it is aften very difficult to avoid the natural terminations.

The five different tissues of the body also modify the inflammation ascording to the tissue inflamed, viz; tho cellular (Heshy) tissue, is characterized by great swelling, throbbing pain, and by its suppurating in cavities-not spreading all over that tissuce. Inflammation of tho serous tissuo, has sharp lancinating pain, scarocly any swelling, but much reaction' (fever), throws out lymph, and is very liabl. form adhesion-not likely to terminate in mortifioation oept in penitonitis (inflammation of the lining mombranct of the abdominal cavity), which sometimes terminates !hus in a few hours, showing the necessity of immediato aotion. Inflammation of the mucous tissue, is characterized by burning heat, or stinging pain (hence the hat of the stomach, bowels, \&o.)-without swelling, not muoh fobrile reaction, and never terminates in resolution (hoalth) without a copious discharge of mucous, as from the nose and lunge, in colds, catarrhs, coughs, \&o. Inflammation of the dermoid (skin) tissue, as in erysipelas, is charaoterized by burning pain-spreads irregularly over the surfaoe, forming blisters containing a yellowish serum, but nover forms adhesions, nor suppurates in cavities but upon the surfice. Inflummation of the fibrous tissue, or rheumatio inflammation, is characterized by severe aching or gnawiug pain-is not liahl to terminate in suppuration nor mortifioation-nearly
 joints, or depositing earthy matter, as in gout-in poouliarly Liable to dange its place, being very dangerous $3 f$ fo ohangen

## Wl

not being indulged in, from its increasing the difficuty; the cough also aggravates the pain ; great prostration of strength, the countenance expressing anxiety and suffering. The breathing is short, hurried, and oatching, to avoid inorease of pain; in some cases, the cough is only slight. It may be complicated with inflammation of the lungs, or bronobial tubes and if so complicated, the expectoration will be mixed or atreaked with blood. Yet it makes but very little difference, as the treatment is nearly the same-with the oxception of expectorants, quite the same; although expectorants are not amiss in pleurisy, but absolutely necessary in inflammation of the lungs. Even Mackintosh, of the "Regulars," says: "It must be recollected that pneumonia (inflammation of the lungs) and pleuritis (pleurisy) frequently eo-cxist (exist together); but neither is that circumstance of much conseqreace, being both liffammatory diseases, and requiring the same gencral remedies." But there I stop with him; for I cannot go the Heeding, calomel and antimony. I have quoted his words Io satisfy the people that the "Regulars" acknowledge the uecessity of a similar treatment in all inflammatory diseases, whe difference between the two branches of the profession oxisting only in the remedies used.

Causes of Pleurisy.-Cold, long applied, constringes (makes 'smaller) the capillaries (hair-like blood-vessels) which cover as a net-work the whole surface, impairing the circulation, driving the blood internally, causing congestion (an unnatural accumulation of blood) upon the pleara, hence pleurisy. Exposures to rains, especially cold rains, cold, wet feet, recission (striking in) of mcasles, scarlet fever, cheumatism, \&o., often cause inflammation of this char-1 aster.

Indications.-Relax the whole surface, which remoyes the obstructions-restore, and maintain, an equal circulation, and the work is accomplished. The temperature of the surface and extremities is much diminished, showing that the blood has receded (yone) to the internal, diseased, organs, the temperature of which is much increased ; for with the blow goes the vitality (heat) of the body. This condition of the system olearly indicates the treatrnent, viz. : the 1)plication of the heat to the surface in such a way as to
ficusty; the of strength, ring. The id inorease it. It may or bronchial on will be $t$ very little —with the though $\mathrm{e}_{2}$ utely necesckintosh, of I that pneuritis (pleujut neither being both me general noot go the d his words owledge the ry diseases, e profession
constringes ood-vessels) pairing the congestion leara, hence rains, cold, carlet fever, $f$ this char-1
ich removes circulation, tare of the howing that direased, ord for with This condint, viz. : the a way as to
be able to keep it there until nature is again capable of carrying on her own work, in her own way.
Treatuient:- It has been found that the quickest and least tronblesome way in which heat could be applied to the whole surface, is by means of burning alcohol, formerly called a "Rum eweat," because rum was stronger than at present, and more plenty than alcohoi; but now alcohol is the most plenty, and much the strongest and cheapest. It should always be in the house (the 98 per cent.) ready for use as described under the head of "Sweating with Burning Alcohol," (which eee) or if it is day time, and gres are burning, you can give the vapor-bath-sweat, by placing a pan, half or two-thirds full of hot water under the charf, having a comforter around you; then patting into it $00-$ casionally a hot stone or brick, until a free perspiration is produced and held for from 15 to 30 minntes, according to the eieverity of the case; and if this is commenced as soon as the attack is fairly settled upon the patient, in not more than one case out of ten will it be necessary to do anything more; but if fairly established, or if of a day or two's standing, then, at the same time you are administering the sweat, place ,the patient's feet in water as hot as it can be borne ; have also a strong tea made of eqnal parts of pleurisy-root and catnip, (this root is also called white root-Doctors call it ascleplas tuberosa)-into a saucer of this hot tea put 2 teaspoons of the "Sweating Drops," drinking all at one time, repeating the dose every hour for 5 or 8 hours, using only 1 teaspoon of the drops at other times, except the first, giving the tea freely once or trice between doses. Ais soon as the sweating is over, place the patient comfortably in bed $s 0$ as to keep ur the perspiration from 6 to 12 hours, or until the pain and uneasiness yield to the treatment. If necessary, after the patient takes the bed, place bottles of hot water to the feet and along the sides, or hot bricks, or stones wrapped with flannel wet with vinegar, to help to keep np the perspiration. Mustard nay also be placed over the seat of pain, and upon the feet, also rubbing the legs and arms with dry flannel, whioh very muoh alds the process when the attack is severe. If the pain continnes severe, and perspiration is hard to maintain, steep cayenne, or common red peppers in epirits, and rub the whole surface with it well. and long, and I will assure the blood to come ont soon, and see what is going on externally. Keep the patient well covered all the time, and avoid drafts of cold air. As the painful symp. toms begin to subside, the doses of medicine may i e lessened, and the time between doses lengthened, until the diseesse is fairly undor control ; then administer a dose of the "Vegetable Physic," or some - iler cathartio, if preferred, or if that is not at hand, this course may be repeated or modified to meet returning or changing symptoms.
Wetting the snfface daily, with alcohol and water, equal partis, Fill be found an excelient assistant in treating any dit ase, especially internal infammations, as Pleurisy, Inflammation of the Langs, Oonsumption, Bronchitis, do., do.

The pleurisy root is almost a specifo in pleurisy or inflammation of the lungs; no other known not or herb is squal to it for producing and keeping up perspiration (drug. kists nsually keep it), bat if it cannot be got, pennyroyal, sage, \&ro., or one of the mints, must be used in its place. Whe only objection to the foregoing treatment is thit, the Danstors say:
Helghl I gueas he wasn't very alok;
F'or Beel ho's round in "dunble quilox:"
But alopath holds 'em for weoke als or neven,
When bleeding, calomel, and and mon aro stron.

Tn illustrate: I awoke one night with sovere pain in the furt ride (I had been exposed to cold during the afternoon), could not move of draw a full breath without very much increasing the difficulty; the night was oold and fires all drwn, I studied my symptoms for a few minutes, and also reflected upon the length of time which must olapse, if I waited for fires to be built; then awoke my wifo, saying ' $D_{0}$ not be frightened, I have an attack of Plourisy ; you will get me a comforter, saucer, and the aloohol, and return to bed without distarbing any one.' With persuasion, or almost sompulsion, she did so ; for she desired to build a fire and make a more thorough work of it; but I had made up my mind and resolved to carry out the oxperiment upon myself, and now had the only chanco. I arose and poured the savicer nearly full of alcohol, and set it on fire; wrapping the conwforter around me, I sat down upon the ohair, over it, and continued to sit until the alcohol was all burned out, and I in most profuse perspiration; the pain and diffcult breathing having nearly all subsided; I then returned to hed, the perspiration continuing for some considerable tipn longer, by retaining the comforter around me to avcid chanking it as I returned to bed, during which time I againi fell asloep. When I awoke in the morining I could just realiee a little pain, or rather uneasiness, upon taking a full breath, but did nothing more, being very careful about exposure however, through the day ; but at bed time I took another alcohol sweat, and that was the last of tho pleurisy.

Again: Mr. , medical etzadent, rooming in the日ame hose where I lived, aroke in the night, atteoked with plouzisy, the same as myself, after exponure; bat as te wail attending the leotures of alopathio profermons of
course, he must have one of them to attend him; one was called, three pints of blood were taken, calomel and antimony were freely given, and in about three or four days the dis. ease gave way to time, or the treatment; but a calomelDiarrboa set in, and came very near terminating his life, and kept him from college and his studies over six weeks; and he said if he was ever calomelized again, he would prosecute the doer to the end of his life; but he gradnated in that school of medicine, and no doubt is now expecting to -go and do the same thing. Choose ye your servant. Shall he be reason, with common-sense results, or shall ha be silver-slippered fashion, with his health-destroying policy? It need not be argued that these were not parallel cases, for I had the plearisy when young, and was treated in the fashionaible style, and was constantly liable to, and had frequent attacks of it during my earlier life.

In chronic cases, which sometimes occur, and frequently ander other creatment, it will be necessary not only to use the foregoing treatment, but to add to it an emetic about once a week, alternating with the sweating process, witre muioh external friction, occasionally, with the pepper and spirits, to hold the blood to the surface.

Since the publication of the foregolis; I have seen a statement going the rounds of the "Papers," that a bad case of burning had taken place in N. Y., by the alcohol process of sweating, calling it new; but it has been in use more than forty years ; I have used it, I speak safely, more. than a hundred times, and never before heard of its injuring. any one; but still it is possible that'some accident may have ocourred in its use, or that some one has undertaken it who was not capable of presoribing; but if calomel would claim one year's use under its most accomplished prescribers with onu case of injury, I would say, let it be continued; but in place of one it is hundreds ; further comment is unnecessary.
But those who prefer, or from the absense of alcohol, os other necessitios, can take "grandmother's plan," i.e., place the feet into hot water, und drink frecly of peanyroyal, sage, or other hot teas, for fitteen to twenty minutes; then get into bed, continuing the teas for a short time, remaining in. bed for a few hours ; which, if commenced soon after thy
attack of colds, or even more severe diseases, will, in nine out of ten cases, not only relieve, but prevent days, perhaps weeks, of inconvenience and suffering.

Where there are complications with the substance of the lungs, you will fir ${ }^{2}$ "ppla retions under the next hoad.
3. Inflammation of the Lunge-Is usually, by physicians, called Pneumonia, from the Greek, Pneumon, the Lungs. It may involve the whole lung, on one or both sides, but is more generally apfined to one side, and to the lower portion, than to the whole lung.

CaUses.- Exposures to cold, wet, cold feer, arafts of air, especially if in a perspiration, recession of eruptive diseases, sco., and consequently more liable to come on in the winter, or cold wet changes of spring, than at any other time; and upon those whose langs are debilitated by previous attacks, or are predisposed to, or actually suffering under disease.

Symptoms.-Inflammation of the Lungs, like other diseases of an inflammatory character, nearly always commenoes with a chill, soon followed by fever, more or less violent, according to which, the severity of the case may be somowhat predetermined, unless of a congestive character; in which case, instead of a hot and fevered surface, there will be a cold, clammy feel to the hand, as well as unpleasant to the patient. There will be difficulty in taking full breaths, as well as an increased number of breaths to the minute, which in healthy persons is generally about twenty. Dull pain, with a tightness of the chest, short and perpetual hacking congh, scanty expectoration, which is tough, and sticks to the vessel used as a spittoon, and is more or less streaked with blood, or more like iron rusifin color, and may have so mach blood in it as to make it a brighter red. The pulse is variable, so much so that but little confidence can be placed in it. The tongue soon becomes dry and dark; but a dry, and glossy tongue, with early delirium, are considered dan. gerous symptoms, that is, under "Old Schoot Treatment." But with our rational treatment we very seldom have a fatal termination, yet it is ocensiboul, apd really wonderful that it is not more frequent, when we take into account the * neglect of some physicians and imprudence of many patients.

other dis-oommenss violent, be someacter ; in there will leasant to 11 breaths, 9 minute, ty. Dull tual hacknd sticks 3 streaked y have so e pulse is be placed ut a dry, lered daneatment." we a fatal rful that sount the patients,

Indioatiozm - As the blood has receded from the surface and centered apon the langs; the indications are to return it to its original vessels, by judioiously applying heat and moisture, which is sure to relas: their constringed condition, instead of outting a hole snd letting it run out [bleeding], whioh prostrates the patient and retards his recovery.
Treatucant. - The treatment of Inflammation of the Langs in recent casee, will be at first the same as for "Pleurisy", that is to produce free perepiration-soak $t \rightarrow$ feet in hot water while administering the "Alcohol Sweat," or Tapor Bath, as there directed, with the white-root tea and "Sweating Dropa," for several hours, Fith bottles of hot water or hot bricks to the feet and aldes, mus-tard-dratts to the feet also, as they can be borne; and after 6 or 8 hours, the "Vegetable," or other cathartic should be administered, and great care not to expose the patient: to drafts of air during lts operation, especially if in perspiration. If this course is faithfully persevered in, it will call the blood to the surfaceprevent congestion of the lungs (unnatural accumulation of blood) -lessen the fever-ease the pain, and aid expectoration. But if the expectoration becomes difficult, and the disease should not seem to yield in from 8 to 12 hours at farthest, or by the time the cathartio has freely operated, then, or soon after, give the "Eolectic," or "Lobelia-meed Emetio," as directed under that head; and if called to a case which is already confirmed, it is best to kegin with the emetio, then follow ap as above directed in recent cases. An expectorant, in confirmed (established) cases will be neededlet it be composed of tincture of lobelia 1 oz . tincture of ipecac $\frac{1}{2}$ oz. ; tincture of blood-root $\frac{1}{2}$ oz. ; simple sprup or molasses 2 ozs .; mix. Doss-One teagyoon every 2 howis, ulternately with the white-roct tea and "Sweating Drops," excropt the frat dose may be 2 teaspoons. The case must then be watched carefully; and any part or all of the treatment may be repeated, lessenned, increased, or modifed, to suit returning or remaining symptoma.

Persons having this book in the house, and being governed by it, having also the leading medicines on hand; and nommenoing with this disease, or inflammation of any other organs, modifying the treatment by common sense, acrording to the remarks on "General Inflammation," will not have to repeat the course in one case out of ten."

In inflammation of the stomach, known by heat, acrording to the degree of the inflammation, drinks of slippery-elm water, or mucilage of gum arabic, \&c., may be freely taken; and in inflammation of other organs, other modifications will be required; as for Dysentery, which is an ing
flammation of the large intestines, the "Injection must be freely used, as also the perspiring processes in all cases.

In chronic infammation, the emetic should be given ouce a week, and some other times durii, the week, the sweating should be gone through also, with dry frietion to the whole surface, by means of a coarse towel, for fifteen to twenty minutes cach time, twice daily; and if the feet are hajitually cold, wash them in cold water and wipe them dry at bed time, then rub them with a coarse oloth or the dry hand until they are perfectly warm and comfortable; and it may be oxpeoted that these long-standing cases will soon yield to this rational course.

Frmale Debility and Imregularities.-It is a selfevident fact that the finer the work, and the more complicated a piece of machinery, the more liable is it to become deranged or out of order; and the more skillfol must be the meehanio who undertakes to make any necessary repairs.

Upon this consideration I argue that the system of the female is the finer and more complicated, having to perform a double work (ohild-bearing), yet confined to the same or leas dimensions than tho, male. And to perform this doable function of sustaining her own life, and giving life to her speoies, it beoomes necessary, in the wisdom of God, to give her such a peculiar formation, that between the ago of fourteen and forty-five, or the child-bearing period, she should have a sanguineous (blood-like) montily diseharge, from the rgans of generation, kn?wn under the various names of monthly siokness, menses, catamenia, courses, menstruation, \&o. Why it should have been so arranged, or necessary, none can tell. We are left to deal vith the simple faot; and it would be just as wise in us to say that it was. not so, as to say there was no one who planned it, or any other thing, because we cannot see or fully understand the groat first oause. The blood disoharged usually amounts to from four to six ounces, and should continue only from four to five days. And as this book will fall to very muny families who will have no other medical work for referense upon, this subject, it will not be amiss for me to give the neoessary instructions here that all may be able to qualify themselves to meet the exigencies (demaid) of
tion 'must all cases. be given - week, the - friction to or fifteen to the feet are wipe them loth or the mfortable; cases will It is a self. ore complito become ol must be cessary rotem of the to perform se same or bis donble life to her. od, to give le age of riod, she discharge, he various , courses, arranged, 1 with the 0 say that lanned it, lly underad usually l continue k will fall lical work iss for me y be able mand) of
all casea. Previous to menstruation, pain or uneasiness is folt in the back, loins, thighs, and a sense of heaviness in the womb, which lies in the lower part of the abdomen. Some are very nervous at these periods, others with flushed face, accompanied with dizziness and headache, sickness at the stomach, \&o. In young girls, these new feelings produce uneasiness; for want of knowledge as to their cause and result, and should lead them to seek maternal advice and counsel, unless they have some book of this kind which explains the whole matter. The breasts, at this period, enlarge and often become the eat of uneasiness, or actual pain. Let no real danger be apprehended, for these unpleasant sensations will continue until in healthy young females there will be a few drops of reddish fluid, resem. bling blood, pass from the genital organs, affording imme diate relief; not from its quantity, bnt from the accomplisiment of their natural work. Owing to their better general health, which is improved by the style of living; some girls menstruate a few wonths, or a year, perhaps, earlier than others. When they take an active part in the labory of the honse, freely romping, playing, \&o., their health and strength become fully developed; and menstruation comes on a little earlier, and is more nealthy and regular.

Allow me here to give a word of cantion about taking cold at this period. It is very dangerous. I knew a young girl, who had not been properly instructed by her mother mpon this subject, to be so afraid or ashamed of being found with stains upon her clothes, which she did not know the meaning of, that she went to a brook and washed herself and clothes-took cold and immediately becams insane -remaining so as long as I knew her. Any mother who 80 neglects her duty to her child, in not explaining these things, is verily guilty.

After this discharge takes place, the unpleasant feelings naturally subside, and the health again becomes good for the montb, when all the foregoing sensations recur again, with a larger flow and longer continueā, reeurring every four weeks; and is then called menses or monthly conrene.

Thi function of the female system, from the fineness and complication of its structures is very liable to beccme deranged in various ways.

It may be entirely stopped, called amenorrhea (groen sickness, suppression of the menses, \&c.),-it may become painful and imperfect (dysmenorrhea),-it may be very free or excessive (menorrhagia), like hemorrhage; or it may be irregalar in its recurrence and duration (leucorrhea).

But as this monthly disoharge is absolutely necessary to health, between these periods of life-its suppression-painfulness-excessive flow, or irregularity, will soon produce reneral female debility.

Causes.-The female organism is such that what affects she general system of the male, much more frequently affects the organs peculiar to her system only. No reason can be given for it, except the wisdom of the Creator, or the necessities of her construction. But this debility and irregvelarity are so interwoven together that what causes one must secessarily affect the other.

In the good old grandmother-days, of girls helping with the work of the household ; warm but loose clothing, plain food, good thick-soled shoes, and absence of novels to excite sexual thoughts, \&e., such a thing as a feeblo, debilitated woman or girl was hardly known, but now sedentary habits, stimulating food, every eonceivable unphysiological style of dress, paper-soled shoes, checking perspiration, excitable reading, repeated colds by exposure going to and from parties thinly clad, standing out talking with supposed friends (real enemies) when they ought to be by the fire or in bed, masturbation, excessive co-habitation, miscarriages, \&ro., all tend to general debility; and the real wonder is that there are so few eases.

Symptoms.-The very word debility, shows plainly the leading symptom-weakness. She appears pale, especially about the ears, lips, nose, \&c., with a bluish circle about the eyes, which appear rather sunken from the fact that the countenance is generally bloated, leading her friends to feel not over-anxious about her, supposing her to be in good health, as she still appears in good flesh; but if you take hold of it, it will be found soft and flabby; she feels dull, languid, and drowsy, stomach out of order, nausea, often with futtering about the heart; the nervous system sometimes becoming so much involved as to bring on fits of deprondency, leading many to attempt, and occasionally succeed
mhea (green ; may become $\square$ be very free or it may bo rrhea).

helping with othing, plain vels to excite $\Theta$, debilitated ntary habits, gical style of jn, excitable nd from parosed friends re or in bed, iages, \&oc., all is that there
splainly the de, especially ole about the act that the riends to feel be in good if you take he feels dull, rausea, often yystem somon fits of deally succeed
in taking their own lives. The feet and limbs may become swollen, restless in sleep, often craving unnatural food, os clay, soft stones, tea-grounds, \&c. There may be a dis charge from these organs of a glairy or whitish fluid, rosembling the white of an egg, the disease taking the name, in this complication of Whites, fluor albus or Leucorrhea, \&c.; it is more common among married females, but often occura before marriage. There may also be a sensation of bearing down, or cven falling of the womb (prolapsus uteri) which is much the most common also amongst the ried. The bowels nsually costive ${ }_{2}$ but often griping pais shich cause much suffering. Pains may occasionally be experienced in the head and back; but instead of being looked upon as unfavorable, thev wither show that nature is trying to bring about the natur ${ }^{\text {n }}$ "csharge, and needs the assistance of rational remedics

It is not to be sur pos id that every patient will experience all of these symptoms, at one, or all of the time; but they commence as pointed out, and if allowed to go on without proper correction, they will increase in severity until they may be all experienced in a greater or less degree.

Indioations.- The symptoms indicate (point out) the treatiment, that is, if there is debility, tonies are required: paleness shows that the blood has left the surface and must be brought back by heat, friction, \&c. The softness of the fiesb indicates a more nutritious diet. The dullness and drowsy. languidness indicate active exercise. Stomach and heart indicate an alterative cathartic. The nerves require soothing and quieting remedies, travel, agreeable company, \&c., to draw the mind away from self. The glairy mucous discharge, indicates an inflammation, and calls for washings of the parts by cooling and astringent injections, both as an act of cleanliness, as also of cure. The falling of the womb points out the necessity of a pessary support, until the general treatment relieves the difficulty. Costiveness points out laratives, whilst nature's efforts, shown by pains in the head, back, \&o., elearly indicate the whole general remedies above pointed out; and which shall be a little more particularised in the following:

> Prarityanv.- For the weaknoss and general debility of the paitient, let the "Tonif Wine Tincture" be freely taken in con-

## DR. OHASE'S RECIPES.

nection with iron to strengthen and invigorate the systen ; bettroot, [often oalled birth-root, Indian-balm, ground-lily, \&o.], the root is the part used, Solomon's seal and columbo, spikenard, comfrey, efatian, the roots, with comomilo flowers, of each 1 oz .; with a liti.e white oak bark, may be added to the wine tincture to adapt it to these particular cases, taking a whe-glass, if it can be borne, from 3 to 5 times dally. Domestic wine may be used in place of the Port. The best way to take the fron is to have a foot or two of nail rod heat, then filleu up, mixing with it as much grcund ginger, rubbing them thoroughly together. Dosm-Half of 1 teaspoon 3 times daily, in a little honey or molasses, increasing or lessening the dose to produce a blackness of the stools; and continue these preparations for 2 or 3 months at least, or until well. Using for the paleness, warm bathing once or twice a week with dry hard rubbings of the whole surface, night and morning, which brings the blood to the surface, relieving the engorged iniernal organs. Moderate quantities of broiled pork, roast beef, mation, \&c., with cold bread and roast or baked potatoes, to overcune the softness of the flesh, and give strength for the necessary exercise which will -remove the dullness and drowsy languid feelings. This exorcise may be labor about the house, but better to be out of doors, as gardening, romping, swinging, singing and riding, or ranning when it can be borne, with agreeable company, travel, \&c. For the stomaoh, heart and costiveness, make the following :
2. Femais Larative Pie.-Aloes, macrotin, and cream of tartar, of each 2 drs. ; podophylin, 1 dr. ; make into conniton sized pills by using oil of peppermint 15 to 20 drops and thick solution of gum mucilage. Dose-One pill at bed-time, and sufficiently often to keep the bowels just in a solveat condition.
If the aloes should not agree with any, they may use the followring :-
3. Female Laxative and Anodrna Pil.-Macrotin and rhubarb, of each ten grs. ; extract of hyoscyamus 10 grs. ; Castile soap 40 ozs. $\mathfrak{j c r a p e}$ the soap and mix well together forming into common sized pills with gum solution. Dose-One pill as the other, or suffciently open to keep the bowels solvent, but not too free. The byoseyamus thds to quiet the nerves without constipating the bowels.

To sooth and quiet the nervous system and pains, if very violent, when the courses commence or during their progress, make the following:
4. Ptil for Pannfol Minstruation.-Anodine.-Extract of stramonium and sulphate of quinine, of each $16 \mathrm{grs} ;$-macrotin ${ }^{*}$ 8 grs . ; morphine 1 gr . ; make into eight pllls. Doss-One pill, repeating once or twice only, 40 to 50 minutes apart, if the pain does not subside before this time. The advantage of this pill is
 use.

[^8]

-Extract of macrotin ${ }^{4}$ -One pill, if the pain this pill is

5. Tel-Injection for Lecoorries.- When the glairy macua discharge is present, prepare a tea of hemlock, inner bark, and witch hazel (often cali d spotted alder), leaves and bark, have a female syringe sufficiently large to fill the vagina; and inject the tea, twice duily ; and occasionally, ;- had cases, say twice a week, inject a syringe of the following:
6. Injectioy for Cmionic, Female complatnys.-White vitriol and sugar of lead, $\frac{1}{8}$ oz.; common salt, loaf sagar, and pulverized alum, of each $\frac{1}{d r}$. ; soft water 1 pt . Simmer all over a slow fre ior 10 or 15 minutes ; when cool strain and bottle for use, keeping well corked. Inject as mentioned in the paragraph above, holding the syringe in place for a minute or two at least. This injection is valuable for C-p. with males, as also, for females.
7. In cases of falling of the womb ; not only the cheapest, bat the best pessary will be found to be a piece of fine, firm sponge, cut to a proper size to admit, when damp, of being pressed np the the vagina to bold the womb to its place. The sponge should have $\varepsilon$; stout piece of small cord sewed two or three times through its centre, up and down, and left suffliently long to allow of its being . taken hold of to remove the sponge, once a day or every other -day at farthest, for the parpose of washing, cleaning, frad using the necessary injections; and this must be done while the patient is lying down to prevent the womb from again falling or prolapsing. After having injected some of the "Tea" as above, wet the sponge in the same, and introdnce it sufficiently high to hold the womb to its place.
But in the less complioated cases, when the pain in the head, back, loins, \&co., indicate that nature is making an effort to bring on the courses; besides the tonio bitters, iron-filings, tepid bathing and friction, exercise, \&\&., the diffeculty being more in the constringed condition of the vesseis of these organs, I would say, a tow days before the period when the menses should appear, havi prepared the following :
8. Evenagogun Tinoturr.-Alcohol 1 pt ; ; red oxide of iron 1 oz . oils of juniper and savin, of each $\frac{1}{2}$ oz; ; oil of tanzy $\frac{1}{8}$ oz. ; tincture of ergot 3 drs. ; tincture of Spanish fies $\frac{3}{2}$ oz. ; mix all and shake when taken. - Dose-One teaspoon three times daily, to be taken in mncllage of slippery elm or gum arabic, and drink freely of the mucilage also, through the day. Or the following:
9. Exenagogus Pimi-Precipitated carbonate of iron and gum myrrh, of each 2 drs. ; aloes, and tincture of Spanish fies, of each 1 dr. ; and oil of savin $\frac{1}{4}$ dr. All to be pulverized and made into one hundred pills by using thick gum solution. Dosn.-One pirh. from one to 3 times daily, but not to move the bowels unpleasantly.

If the paitent is troubled, in the least, with pile, the "Tincture" of the preeeding recipe will be preferable; i not, the " Pill" is best.

## 214

## DR. OLMEN'S REOMPES.

One thing is very evident in these cases of debility; the blood is deficient in iron; consequently that artiole should enter largely into any medicine intended for its reliof; and in most cases the iron filings and ginger will be found, oontinued for two or three months, all the medicine required; and that must not be omitted nor negleoted, in any case whateve.: Iron is the main spoke in these female wheels, and very valuable in general debility of males as well as. females.

For real hemorrhage, whioh may be known by the congulation (clotting) of the blood, as the menstrual fluid does not coagulate but is absorbed into the clothes, seo "Uterine Hemorrhage," or the "Styptic Balsam," but for profuse or long continued flowing or wasting, use the following ;
10. Powder for Exasserve Flooding.-Guma kino and catchn, of each 1 dr .; sugar of lead and alum, cf each if dr. $;$ pulverize all and thoronghly mix, then divide into 7 to 10 graln powders. Dosy--Ois averv 2 to 3 hours until checken, then lew often, merely

If any female into whooc hands this book shall come, will carefully study and use the foregoing remarks and prescriptions, and is not an hundred times better pleased with the results than she would have been by calling half the physicians of the day, I should be very muoh disappointed, and I would be sure that the remedies did not have their oommon effects; which I feel will not be the care from the great good they have many times alrpady done; bosides, they save the delicacy of exposures, in mans instanoes, and always save the delicacy of conversing with and explaining their various feelings and conditions, to one of the opposite sex. So highly important is this fact, and that the information should become general, every girl over thirtoen years of age ought to ta furnished with one cen Dr. Ohase's books.

## TANNERS', SHOE ANDHARNESS MAKERS' DEPARTMENT.

colors.-Best Color for Boot, Shoi, and Harniss Enge, and Ins whioz oannot Frekeze.-Alcohol 1 pt.; tincture of iron 1 ; oz.; extract of logwood 1 oz ; nutgalls, pulverized, 1 oz ; gof water, $\frac{1}{2} \mathrm{pt}$. $;$ mix. Or:
2. Taris alcohol, 1 pt.: extract of logwood and tincture of iron, of each 1 oz ; nutgails, pulverized, 1 oz. ; and sweet oil $\frac{1}{2} 0 \mathrm{oz}$;

I have found shoemakers using these colors, each thinking he had the best color in the world. The sweet oil is believed to prevent the hot iron from stioking, and to make a better polish.

The first one makes a very passable ink for winter use, by oarrying a quiok hand to prevent it from spreading in the paper, from the prosence of the alcohol, whioh, of course, is what provents it from freering, and that is the only argument in favor of it as an ink for writing purposes.
3. Chisap Color for the Eidee.- Soft water 1 gal. ; extract of $\log$ wood 1 oz ; and boil them until the extract is dissolvad, then romove from the flie and add copperas 2 ozs. ; bi-chromat of potCh and gum arabic, of each $\frac{1}{2}$ of ; all to be pulverized.

This makes a oheap and good oolor for shoe or hamess edge, but for cobbling or for new work, upon which you do not wish to use the " hot kit," but finish with heel ball, you will find that if, as you pour this ont into the bottle to use; you put a table-spoon of lamp-black to each pint of it, it. will make a blacker and nicer finish. It makes a good color for cheap work, but for fine work, nothing will supersede the first colors given. This also makes a very good ink for writing purposes, if kept corked to avoid evaporation, which makes it gummy or stioky. See also " Grain Side Blacking."
4. Sking for Boots and Shoess. in Trreming-out.-Thike wator 1 qt., and dissolve in it, by heat, isinglass 1 oz,, adding more water to make up for evaporation; when disgolved, edd etoroh 6 ozs: ; extract of logwood, beeswax, and tallow, of each 2 ozs.; and continue the heat until all is melted and well mixed. Ruli the starch up first, by pouring on suffeient boiling water for thet purposes.

## DR. OEABE's REOTPES.

It makes boots and shoes soft and pliable, applying it When treeing-out, and is especially nice to clean up work which has stood long on the shelves.
6. Watere-Proop Oif-Pabty Blackivg.-Take camphene 1 pt., and put into it all, the India-rubber it will dissolve; when dissolved, add curriers' oil 1 pt. ; tallow g lbs. ; lamp-black 2 oss ; mix thoroughly by heat.

This is a nice thing for old harness or carriage-tops, as well as for boots and shoes. Or you can dissolve the rubber in the oil by setting them in rather a hot place for a day $c^{-}$ two; and save the expense of camphene, as that is of no nse only as a aclvent to the rubber. There are those, however, who do not like to use the rubber, thinking it rots the leather; then use the following:
6. Water-Proof Pasti without Rubber.-Take tallow 1 lb .; beeswax $\frac{1 \mathrm{lb} .}{}$; castor or neat's foot oil $\frac{1}{2}$ pt. ; and lamp-black $\frac{1}{2}$ oz.;
7. Neat's-Foot Oil, brought te a proper consistence with a dittle beeswax and tallow; colored with lamp-black, will bo found proof against snow or water.
8. Some, however, may prefer the following manner of preserving their boots and shoes, from a correspondent of the Mechanics' Gazette; but.if they do the boots must be made large, from the fact that the preparation has a tendency to shrink the leather He says:-"I have had only three pairs of boots for the last six years (no shoes), and I think I shiall not require any more the next six years to come, the reason is, that I treat them in the following manner:
"I put 1 lb . of tallow and 1 lb . 0 : zosin in a pot on the fire: When melted and mixed, I warm the boots and apply the hot stuff with a painter's: brush, nntil neither the sole nor the npper. Will soak in any more. If it is desired that the boots shonld immediately take a polish, dissolve 1 oz . of wax in spirits of tarpentine, to whioh'adid a teaspoon of lamp-black. A day after the boots have boen treated with the tallow and rosin, rab over them this wax in turpentine, but not before the fire.
"Thus, the exterior will have a coat of wax alone, and will shine like a mirror. Tallow or any other grease becomes rancid, and rots the stitching as well as the leather, but the rosin gives it that antiseptio quality which preserves the Thole. Boots and shoes should be made so large as to ad-
mit of working cork soles. Cork is so bad a conductor of heat, that with it in the boots, the-feot are always warm on the coldest stone floor."
9. Blacie Farmisi for Edae.- Take 98 per centa alcohol 1 pt.; shellac 3 ozs. ; rosin 2 ozs ; pine turpentine 1 oz ; lamp-black oz. ; mix, and when the gums are all cut; it is ready to use; but bear in mind that low proof alcohol will not cut gums properily, for any varnish.

This applied to a bout or shoe edge, with a brush given it the shining gloss resembling much of the Eastern work. Lt is also applicable to wood or cloth requiring a gloss, after having been painted.
10. Varnisie for Harness, the Best in Use.-Take 98 per cent. alcohol 1 gal. ; white pine turpentine $1 \frac{1}{2}$ lbs.; gum shellao $1 \frac{1}{2}$ lbs. ; Venice turpeintine 1 gill. Let this stand in a jug in the sun or by a stove until the gums are dissolved, then add sweet oll 1 gill, and lamp-black 2 ozs. ; rub the lamp-black first with a little of the varnish.

This varnish is better than the old style, from the faot that its pclish is as good, and it does not crack when the harness is twisted or knocked about.
If you wish a varnish for fair leather, make it as the thove, in a clean jug, but use no lamp-black. The pino surpentine and sweet oil make it pliable, yet not sticky.
TANNING, BLACKING, AND FINISHING.-Procisss roi OALI, Kip, and Harness, in from Six to Tmity Days.-For a 12 lb . calf skin, take terra-japonica 3 lbs.; common salt 2 lus.; alum 1 lb ; $;$ put these into a copper kettle with sufficient water to dissolve the rhole by boiling.
The skin, os skins, will first be limed, haired, and treated in every way as for the old process ; then it will be put into a vessel with suffioient water to cover it, at whioh time you will put in one pint of tho composition, stirring it well; adding the satie amount each night and morning for three days, when you will add the whole ; handling two or three times daily all the time tanning; you can continue to dise the tanning liquid by adding half the quantity each time, of new liquor, and by keeping these proportions for any amount, and if you desire to give the lenther the appearameo of bark oolor, you will put in one pound of Sicily sumeo. Kip skius will require about twenty days, light home hides for harness, thirty days; to make good leather, while

## 118

## DR. CRase's reorrza.

calf skins will only require from six to ten daye at most. The japonioa is put up in large cakes of about one hundred and fifty pounds, and sells, in common times, at about four oents per pound in New York.
Brron Rose, a tanner, of Madison, 0 ., says that one quart of oil of vitriol to fifty sides of leather, with the japonica and alum, as above, leaving out the salt, will very much improve it; the acid opens the pores, quiokoning the process without injary to the leather.
2. Canadian Processs.-The Oanadinas make four liquors in using the japonica:
The rirgs liquor is made by dissolving, for 2u Bldes of apper; 15-18s. of terra japonica in sufficient water to cover the upper being tanned. The second liquor contalns the same umount of japonica and 8 lbs of saltpetre also. The sump contains 20 lbs of of japonica, and $4 \frac{1}{2}$ lbs. of alum. The rovary liquor contains only 15 lbs . of japonica, and $1 \frac{1}{4}$ lbs. of sulphurio acld; and the leather remains 4 days in each liquoy for apper; and for sole, the quantity and time are both doubled. They count 60 calf akins in place 3 days.
3. Deger Sxing-Tanniva and Bungrva fon Glovzs,-For each ekin take a bucket of water, and put into it 1 qhiof lime ; let the skin or skins lay in from 8 to 4 days; then rinse in clean Water, hair and grain; then soak them in cold water to get out the glue; now scour or pound in good soap suds, for half an hour; anter which take white vitriol, alum and salt, 1 tablospoon of each to a skin; these will be diseolved in sufficient water to cover the skin and remain in lt for 24 hours ; wring out as dry as convenient; and spread on with a bruah +pt of curriers' oil, and hang in the sun about 2 days; after which you will pccar out the oil with soap suds, and hang out again until perfeotly dry; then pull and work them until they are soft; and if. a reasonable time does not make them son, ncour out ln suds again as before, antil complete. The oll may be saved by pourtime. The it from the top of the sude, if left atanding a short over the surfice of the given by spreading yellow ochre evenly rith a brash.

The foregoing plan was pursuod for a number or years py abrother of mine, and I have worn the cloven and know the value of the recipe; but there are plans of using acid, and if the quantity is not too great there is no reason in the Fonld Hivy it may not be used, the only caution necessary is .to see that the strength of reid does not kill the nature of
the leather; in proper quantities it tans only, instead of destroying the fiber. I will give a couple of the most valuablo methods.
that one $h$ the japonvery muoh the process
make four
of upper ; or the upper amount of tains 20 lbs . ontains only the leather the quantiins in place liquor only
-For each ne ; let the - in clean to get ont for half an 1 tablelent water ing out as If curriers' you will until perof $;$ and 18 . at $\ln$ suds by pourig a ahort re evenly it in weil
yeara dy d know ing acid, in in the essary is ature of ing, soaking, and pounding in the suds, re., as in the last, secipe in place of the white vitriol, alum, and sait, as there mentioned, take oil of vitriol (sulphurio acid), and water, eqnal parts of each, and thoroughly wet the fesh-side of the skin with it, by means of a sponge or oloth apon a stick ; then folding ap the skin, letting it lie for 20 minutes only, having ready a solution of sal-foda and water, say 1 lb. to a bucket of water, and soak the skin or skinis In that for 2 hours, when you will wash in clean water and apply a little dry salt, letting lie in the salt over night, or that length of time ; then remove the flesh with a blunt knife, or, if doing business on a large scale, by means of the regalar beam and fleshkinife ; when dry, or nearly so, soften by pulling and rubbing with the hands, and also with a piece of pumicestone. This, of course, is the quickest way of tanning, and by only wetting the ekins with the acid, and soaking out in 20 minutes, they are not rotted.
5. Avorier Metiod.-Oil of vitriol $\frac{1}{2}$ oz, ; salt 1 teacap ; milk sufficient to handsomely cover the skin, not exceeding 2 qts. ; warm the milk, then add the salt and vitriol, stir the skin in the liquid 40 $\frac{m i n a t e s, ~ k e e p i n g ~ i t ~ w a r m ~ ; ~ t h e n ~ d r y ~ a n d ~ w o r k ~ i t ~ a s ~ d i r e c t e d ~ i n ~}{\text { No }}$
6. Tanning Serep-Skins, Applioable for Mittens, Door-Mars, Robes, \&o.- For mats, take two long-wooled skins, make a strong suds, using hot water; when it is cold wash the skins in it, carefully squeering them between the hands to get the dirt out of the wool; then wash the soap out with clean cold water. Now dissolve alum and salt, of each half a pound, with a little hot water, which pat into a tub of cold water sufficient to cover the skins; and let them soak in it over night, or twelve hours, then hang over a pole to drain. When they are well drained, spread or stretch carefully on a board to dry. They noed not be tacked if you will draw them out, several times, with the hand; while drying. When yet a little damp, have one ounce, each, of saltpetre and alum, pulverized, and sprinkle on the fleshside of each skin, rubbing in well; then lay the flesh-sides together, and hang in the shade for two or three days, turning the under olin uppermost evory day, until perfectly dry. Then sorape the flesh-side with a blunt knife, to remove any remaining scraps of flesh, trim off projecting ints, and rub
the flesh-side with pumice or rotten stons, and with the hand; they will be very white and beautiful, suitable for a foot-mat, also nice in a sleigh or waggon of a cold day. They alsn muke good robes, in place of the buffalo if oolored, and sewed tognther. And lamb-skins (or sheep-skins, if the wool is trimmed off evenly to about one-half or threefourths of an inch in length), make most beautiful and warm mittens for ladies and gentlemen.
7. Tanning Fur and Other Skins.-Fifty Dollar Recipe.-First, Removo the legs and other uscless parts, and soak the skin soft; then remove the fleshy substances and soak in warm water for an hour ; now:

Take for each skin, borax, saltpetre, and glauber-salts, of each $\frac{1}{2}$ oz, and dissolvo or wet with warm water sumflicit to allow it to be
Pl it on par on with a brush, thickest in the neutre or thiekest part of the skin, and double the skin together, flesh-side in, keeplig it in a cool place for twenty-four hours, not allowing it to freeze, however.

## Srocesid, - Wash the skin clean, and then:

 White soap is recommenced as the best, but our "White Hard Soap" is the same quality) ; melt them slowry crether, being fleah-side no to allow them to boil, and apply the mixture to the 24 hours.
Third,-Wash the skin elean, as sinove, and have saleratus two ounueg, dissolved in hot rain water. suffioient to well saturate the whin, then:
Thike alum 4 ows. f salt 8 ozs. ; and dissolve in hot rain water; When sufficiently cool to allow the handling of it withont scalding, pat in the pkin for 12 hours ; then wring out the water and hang op for 12 hours more to dry. . Repeat this last soaking and drying when finished.
Lastur,-Fiaish by palling, working, \&o., and finally by rubbing with a plece of pumice-stono and fine sand-paper.

This works acmirably on sheep-skins as well as on furskins, dog, cat, ol wolf-skins also, making a durable leather well odapted to masing.
A man in our county paid fifts sollars for this recipo, and

fil 1 gal .
Turizey d 6 ozs about 4 te 1 gal.,
that plece, I obtained the foregoing recipe. It was published in a work printed in Columbus, O., devoted to the art of painting. From this fact, and also that the gentlemen from whom $I$ obtained it, had tested it, and were using it, I have not myself tried it, but know, from the nature of the artielcs used, that nothing better will be required.
4. Anormasa-Another dryer is made by taking linseed ui 5 gals., and adding red-lead and litharge, of each 31 lbs. ; raw nubber $1 \ddagger \mathrm{lbs}$. ; mugar of lead and sulphate of zino, of eaci $\$ \mathrm{lb} . ;$ pulverize all the articles together, and boil in the oil until dis solved ; when a little cool, add turpentine, 5 gals., or to make it of a proper consistence.
The gentleman of whom I obtained this recipe paid ten dollars for it. He was using it suocessfally, and said he used two or three drops of it to a quart of varnish also, and especially when the varnish did not dry readily.
OIL-PANTS-To Radocis witi Water.-Take gum ahellao i lb.; saltoda $\frac{1}{\text { l }} \mathrm{b}$.; water 3 pta.; put all into a suitable kettie and boil, stirring till all is dissolved. If it does not all dissolve, add a littio more sal-soda ; thils, when cool, can be bottled for use. If it amells bad when opened it does not hurt it.

Diricotions for Using.-Mix up two quarts of oil paint as usual, ercept no tarpentine is to be rised-any color desired. Now put one pint of the gum shellao mixture with the oil paint when it becomes ihick, and may be reduced with water to a proper consistence to lay on with a brush. Two coats will he required, and with the second coat, sand may be applied if desired. I used this upon a pioket-fence with white lead and yellow ochre for the body and a little lamp-black, to give it a dark shade, putting on sand with the second coat. It is still $\mathrm{g}_{\mathrm{m}} \mathrm{m}$ and good, the work being done nearly four years ago.

The sand was applied with tub-like box, with many small holes to alow the even spreading of the sand, as with a pepper-lox. I do not regret using this kind of paint, nor the sanding, as it adds much to the durability of any outdoor painting. But a better plan of sanding is represented \& the "Paintors' Sanding Apparatus" weiow.

[^9]
## DE. GHASE'G REOTPRE.

Some persons may think it bad polley to learn painters to reduce oil-paint with water, but I think every man should be told of the plan, who is going to have a job of work done, and if he makes up his mind to try anything of the kind, it is then his own business; and I am perfeetly sincere in recommending it, for if there was any great fault in it. four years would show it.
3. Painters' Sanding Apparatus.-It is made of tin ; the tube enters upon the nozzle of a small bellows; the sand is put into the funnel, which stands perpendicular apon the upparatus when the broad month-piece is held level is using. The funnel discharges the sand, just before the nozzle of the bellows; and by working the bellows the sand is blown evenly upon the freshly put on paint, through the mouth-piece, the escape orifice not being over the sizteenth part of an inch in depth, and may be made two and a hall or three inches wide.

Many persons like the plan of sanding generally, after painting, but from the fact that when it is desired to renew the paint, brushes cannot last long upon the sand, I think it only proper to sand fences or fronts, where boys' knives would be too freely used.

Tue ssins that dry upon the top of paint, which has peo left standing for any length of time, may be made fit for use again by covering them with the sal-soda-water and soaking them therein for a souple of days; then heat them, adding oil to reduce the mixture to a proper consistence for painting, and straining. Painters who are doing extensive business will save many dollars yearly by this simple prosess. ing.-Sorape off the rosin as clean as arasible and sweep the roof; now:

Dissolve sufficient sal-soda in a bucket of wacer to make it quite strong ; wash the roof thoroughly with the soda-water, and let it remain unti! it is washed off by the rains, or after a few hours, washing off with clean water, rinsing well.
When dry give it ouc coat of pure Venetian-red, wized with one-third boiled, and two-thirds raw linseed oil; the second coat may be any color desired. The soda-water dissolves the rosin remaining after scraping; destroys the greasy nature of the solder, and of the new tin, so that there will be sufficient " Grip" for the paint to adhere firmly. The pure Venetian-red is one of the most durable paints for metallio-roofs, but is often rejected on account of its color. The above mode of painting will set aside this difficulty.
2. Free-Proor Paint-For Roors, \&o.-Slack stone-lime by putting it into a tub, to be covered, to keep in the steam. When slacked, pass the powder through a fine sieve ; and to each 6 qts. of it add 1 qt. of rock-salt, and water 1 gal. ; then boil and sklm clean. To each 5 gals. of this add pulverized alum 1 lb . ; pulverized copperas $\frac{1}{2} \mathrm{lb}$.; and still slowly adă powdered potash $\frac{9}{4} \mathrm{lb}$.; then fine sand or hickory ashes 4 lbs .
Now add any desired color, and apply with a brush-looks better than paint, and is as durable as slate. It stops small leaks in roofs, prevents moss, and makes it incombustible; and renders briok impervious to wet.-Maine Farmer.
3. Water-Proof, Oil-Rubber Pantr.-Dissolve aboul 5 lbs, of India rubber in 1 gal. of boiled linseed oil, by boiling. If this is , too thick, reduce with boiled oll ; if too thin, use more rubber.
Especially applicable to cloth, but "luable for any other material.
Frosting Glass.-The frosty appiarance of glass, whioh we often see where it is desired to keep jut the sun, or "Man's observing eye," is done by using a paint composed as follows:
Sugar of lead well ground in oil, applied as other paint ; then pounded, while fresh, with a wad of batting held between the thuml and finger.
After which it is allowed to partially dry ; then with a utraight edge laid upon the sash; you run along by the side
of it, a stick sharpened to the width of line you wish to appear in the diainonds, figures, or squares, into whioh you shoose to lay it off; most frequently, however, straight ines sre made an inch or more from the sash, according to the size of light, then the centre of th light made into diamonds.
ORIEnTAL-Crystal Painting.-The colors used are Prussian-blue, crimson, white, and yellow-lakes, Rossean, white-zinc, and No. 40 carmine. Druggists keep them, in small tubes. They must be mixed with Demar-varnish, rubbing with a table-knife or spatula upon glass. Directions yor Makna Variovs Sianes, or Compoond Colors.-
Proportion them about as follows-for green 1-5 blue ; 4.5 yellowPropple, 1-6 blue, 5-6 crimson-orange, 1 crimson, 3 yellow-winecolor, 1-12 blue, 11-12 crimson-pink, add a little crimson to white zinc; brown, mix a dark purple and add yellow aocording to the shade desired ; black, add crimson to dark green until the shade sulis you; to make the compound colors lighter, add the lightest color in it, and make darker by using more of the darkest color in the compound. For backgronnds, white, white zinc, or plink white with turpentine and boiled linseed oil and Demar-varnish; black, lamp-black, with asphaltum-varnish and boiled linseed oil and turpeatine in equal quantities ; flesh-color, white zino with a small pertion of crimson and chrome yellow to suit. For sketching out the figures on the ground-work, use a little lamp-black with asphal-tum-varnish, turpentine, and boiled linseed oil to make it flow smeely.

Direonions for Painting.-Make yòur glass perfectly clean, and place it over the picture you wish to copy; then with the sketching preparation, trace on the glass all the lines connected with the figures of the picture which you are copping, being careful to sketch vincs very distinct; when the sketching is done and dry, proceed to lay on the backgronnds inside of the sketched lines until all the sketching is closed; and when the background is dry, proceed to put on the colors, commeseing with green, if any in the figares, ending with yellow. When the colors are all laid, put the background upon the balance of the glass; and when all is dry have un-ton? crumpied very macn in your hand, and then partly struightened out, and lay it over the figure, and keep it in its plase by pasting paper over it in such a manner that it cannct slip a ray, letting the paper cover the whole back of the glass, or a wood-back oan be
placed behind the glass, and all is complete, and will look well or ill, according to the practice and taste of the painter.
2. Fancy Green.-Unscorched, pulverized coffee, put into the white of an egg will, in twenty-four hours, produce a very beautiful green fir fancy painting-proof of poison, in unbrowned coffee:
SKetchinct paptian - lo Preparg. - Bleeched linseed-oii, turpentine and builsam of fir, equal parts of each ; mix.

Have a frame of a little less sizo than the paper to be prepared, and apply paste or thick gum solution to one side and the outer edge of it; wet the paper in clean water and lay it upon the frame and press it down upon the pasted side of the frame, and turn the outer part of the paper over the outside of the frame upon the paste there, which holds it firm ; and when it becomes dry it is tight like a drumhead ; whilst in this condition, with a brush saturate it with the above mixture; three or four coats will be needed, giving each one time to dry before applying the next. Only sufficient is needed to make it transparent, so that when you wish to sketch a rose, or other flower or leaf, from nature, the paper can be placed upon it like the glass in the "Oriental Painting;" then trace the lines and finish it up in the same way also, as there described; or that you may see through it in taking perspective views of distant scenery.
DOOR PLATES-TO MAEE-Cut your glass the right size, and make it perfectly clean with alcohol or soap; then cut a strin-of tin-foil sufficiently long and wide for the name, and with a piece of ivory or other burnisher rub it lengthwise to make it smooth; now wet the glass with the tongue, (as saliva is the best sticking substance), or if the glass is very large, use a weak solution of gum arabic, or the white of an egg in half a pint of water, and lay on the foil, rubblng it down to the glass wilh a blt of cloth, then also with the burnisher; the more it is burnished the better will it look; now mark the width of the foil which is to be the height of the letter, and put on a straight edge and hold it firmly to the foil, and with a sharp knife cut the foil and take off the superfluous edges; then either lay out the letters on the back of the foil (so that they slaill read correctly on the front), by your own judgment or by means of pattern-letters, which can be purchased for that purpose; cut with the knife, carefully holdung down the pattern or straigit edge, whichever you use ; then sub down the ejge of all the letters with the back of the knife, or edge of the burnisher, which prevents the black paint or japan which you next put over the back of the plate, from get ting under the foil ; having put a line above and one below the

## 228

DR. OHASE'S REOIPES.

name, or a border around the whole plate or net, as you bargain for the job. The japan is made by diss living uaphaltum In just enongh turpentine to cut it (see "Asphalturn Varnikh"); apply with a brush as other paint over the back of the letters and over the glass, forming a background. This is nsed on the fron frume of the plate also, putting in' on when the plate is a little liot, and as soon as it cools it is dry. A little lamp-black may be rubbed lato it if you desire it any oiacker than it is without it.

If you choose, you can remove every other foil letter, after the japan is dry, and paint in its placo, red, blue, or other colored letters, to make a greater variety out of which for your customers to choose, as the one they desire you to follow in getting up their plate. Tin toil being thioker than silver or gold foil, will not show the paint through it in little spots as they do; but if these foils are dasired to be used, you can put on two thicknessos by proceeding as follows, which prevents the paint from showing through them : Lay on the first coat of these foils the samo ut directed for the tin-foil and smooth it down by rubbing on the front of the glass; then breathe on it until a dumpness is caused; now put on the second and burnish well, having paper over it; but instead of the knife to out around your pattern or straight edje, take a sharp needlo, using tho point, make lines through the leaf around the pattern letter or straight edge ; then with a bit of Jewelers' wood, or other hard wood, made to a narrow and sharp point, romiove all up to the lines, both in and around the letters, as theso foils have not the substance to peel off as thie tin-foil, japanaing over them the same as the other letters. Paper letters can be cut out of advertisements and put on by wotting the glass the same as for the foil, japanning over them, and when dry, removing them and painting the places out of which they came with various colors as desired, as tho japan . will not peel, but makes á sharp and distinct edge; and these painted letters look well, in this way; and by taking advantage of prinied letters, saves the skill and time necessary to form them.

To illustrate : in the name given bolow, A may bo goldfoil; W will be blue; C, red ; II, black; A, gold-foil; S, blue; E, red; M, black; and again D, wold-fol! which any one can see makes a plate more showy than if all were of 'one toil, or ne color.

Set your glass in the frame with putty, and pat a thin ooat of putty over the whole plate, as the plaster of Paris filling which is generally used soon eats out the japan or paint, and spoils the job. Persons with any ingenuity can very soon make a nice plate if they will pay attention to the above rules, as wel! as to pay five dollars for instructions; as a little practice must be had to become perfect, even if you do pay five dollars for an hour or two's telling and showing. Shellac varnish colored with lamp-black is good in place of the Japan See "Varnish-Transparent, for Wool.' pencil lay out the name or design, not putting the varnish apon the letters, but around it, leaving the syace which the letters of the sign are to occupy, free and clear. The varnish is to cover the 'black surface in the sign or name. When the varnish is dry, have some melted bees-wax, and as it begins to cool, with a, knifé take sonce of it up and scrape it off upon the edge of the 'glass, being etched, so as to form a wall to hold the acld upou the glass while etching ; now lay the glass fat and pour a little flourlo acid on to the name, letter, or design this prepared, and let it remain on for one hour, not allowing the glass to be touched or moved for that time; then pour off the acid into your bottle, and It can be used again. The asphalt prevents the aoids from eating or etching only the letter, aidd the wax wall prevents the acld from flowing off and being wasted. When you pour off the acid, wash the glass with a little water, scrapt off the wax; and remove the asphalt with a little turpentine, and all is done.

The above direstions exe for pran glass; but if you desire, you oan gild the letter which is etched (eat out,) or you cas gild all except the letter, if desired, as described in the recipe for "Door Plates," or you can grind the sunfuee of the glasi
as described under the head of "Glass-grinding for Signs, Shades," \&c.. This applies equally well to "flashed," or what is called "stained glass," worked in the same way as above, patting the design or letters upon the stained side, which eats away the color and leaves the design clean and white; or you oan etch only a part of the way through the stain, which shows up the letter' or flower lighter in color than the rest of the glass, which makes it look very beautiful for side-lights in halls, lamps, druggists' windows, \&c.

There are two kinds of colored glass-one is called "Dotmetal," the othex "Flashed:" The pot-metal glass is made by mixing the stain or coloring with the melted glass, while making, and consequently is alike all the way through. The stained glass is made by applying the color to one side of the glass after it is made, thicn applying sufficient heal to allow it to take hold of the glass only-the color is all on one side ; this is the kind desired.
If it is desired to etch upon druggists' or other jars, it can be done by preparing the name to be pat on, with the varnish and wax; then have a lead boz without top or bottom; in shape on the lower edge to fit the shape of the jar, and press this down upon the wax to make it tight; then pour your acid into the boz which keeps it in its place the same as the waz does on a flat surface. Ornaments or flourishes can be put on as well as letters.

The old plan was to cover the whole surface with wax, then remove it from the letter, which was very alow and troublesome, and if a bit of wax remained upen the bottle, the acid could not cut where the wax remained, then to hold the glass or 31 the fumes of the acid, instead of putting the acid upon the glass.
2. Glass.Grinding nor, Signs, Shades, \&o.-Afte you have. etched a name or other design upon uncolored glass, and wish to have it show off to a better advantage by permitting the light to pass only through tha letters, you can do se by:

Take a plece of flat brass sufficiently large not to dip into the letters, but pass over them when gilding upon the surface of the glass ; then with flour of emery, ard keeping it wet, you san crina the whole surlace very quickly, to look like the ground class globes, often seen upon lamps, except the letter which is

Whole lights of glass can be ground in this way instond of frosting, or the frosting can be done here in place of the grinding, if preferred.
3. Fljorio Actd, To Mare for Etceina Purposes. - You dan make your own fluorio (sometimes called hydro fluorio) acid, by getting the fluor or Derbyshire spar, pulverizing it and putting all of it into sulphurio acid which the acid will cut or digo

Druggists through the country do not keep this aoid genorally, but they can get it in the principal oities and furnish it for about seventy-five cents per ounce, and that ounce will do at least fifty dollars' worth of work. It is put up in gutta-percha bottles, or lead bottles, and must be kept in them when not in use, have corks of the same material. Glass, of course, will not hold it, as it diasolves the glass, otherwise it would not etch upon it.
PORCELAIN FINISH-VErt Hard and Whine, yor Parlors, To prepare the wood for the finish, if it be pine, give one or two coats of the " Varnish-Transparent for Wood," which preventa the pitch from oozing ont causing the finish to turn yeilow; next, give the room, at least, four coats of pure zino, which may be ground in only sufflcient oil to enable it to grind properly, then mix it to a proper consistence with turpentine or naptha. Give each coat time to dry. When it is dry and hard, sand-paper it to a perfectly smooth surface when it is ready to receive the finigh, which consists of two coats of French vino ground in, and brush. with Demar-varnish, until it works properly under the
Mr. Miles, of this city, one of our scientifio painters, has been sufficiently kind to furnish me this recipe prepared expressly for this work, therefore, the most implicit confidence may be placed in it, yet any one can judge for themselves, from the nature of the articles used, that it must be white and hard. He goes on to say that if the French sino in varnish cannot be procured, the varnish may be whitened with sine ground in oil as a very good substitnte, being careful not to use too much, in which case it will diminish the gloss, and be more liable to turn yellow. A little tursentine or naptha may be added, if too thick to work woll, but in no instance should oil be used to thin the paint.

This finish, if properly applied, is very beantiful, and although purely, white, may be kept clean more easily than other kinds of painting by simply using a duscing brush $;$ os

## DR. OHASE'S REOTPRG

if soiled, a sponge wet in cold soft wate without soap, is the better way.
N.B.-Not a particle of white-lead should be used whero this finish is to be applied, either in the priming or any subsequent coats, or a brush used that has boen in load without being thoroughly cleansed, as a yellow hue will soon present itself, whioh is caused by a chemioal nhange taking place between the lead and rinc.

PAINTERS' ECONOMY IN MAKING COLORS,-Prussian Blus-1st. Take nitric acld, any quantity and as mach iron shavings from the lathe as the acid whll dissolve; heat the iron as bot as can be handled with the hand; then add to it the acld in small quantities as long as the acld will dissolve it, then slowly add double the quantity of soft wator that there was of aoid, and pat in iron again as long as the aoid will disoolve lt. 2nd. Tak; prussiate of potash, dissolve it in hot water to make a strong solution, and make sufficient of it with the grat to give the depth of tint desired, and the blue is made. Or:
2. Avorizi Merion. - A very passable Prusulan blue la made by taking salphurate of iron (copperas) and prusslate of potash, equal parts of each, and dissolving each separately in water, then moling the two waters.
3. Caromin Yellow.-1st. Take sugar of lead and Parls white, of each 5 lbs.; dissolve them in hot water. 2nd. Take bl-ohromate of potash 62 ounces., and dissolve it in hot wator almo, each artiole to be dissolved separately, then mix all together, putting in the bichromate last. Lei stand 24 hours.
4. Crrones Green.-Take Paris white 67 lbs . a ugar of lead and blue vitriol, of each 3 lbs ; alum 101 ozs. ; best sof Prusslan blue and chrome yellow, of each 3t lbs. Mix thoroughly while in fine powder and add water 1 gal., stirring well, and let stand 3 or 4
5. Green, Dorabie and Chieap.-Take spruoe yellow and color It with a solution of chrome yellow and Prusslan blue, until you give it the shade you wish.
fit 6. Pidris Green, Trake unglaciked lime of the best quallty, slack' It with hot water; then take the finest part of the powder and add alum water as strong as can be made, sumplent to form a thick paste, then color it with bi-chromate of potash and sulphate of copper, until the color sulte your fanoy. N.B.- The sulphate of copper gives the color a blue tinge-the bl-obromute of potash a yellow: Observe this and you will nevor fall.
 ansonic 21 ibj ; ithechromate of potash 1 I ozs. $;$ mix them thoroughis in fine powder, and add water 3 pts, mildigg well again and let

## BLACKSMITITS' DEPANTMENT.

8. Pes Brown.-1st. Take sulphate of copper, any quantity, and dissolve it in hot water. $2 n d$. Take prussiate of potash, dissolve it in hot water to make a strong solution ; mix of the two solu. tions, $\Omega$ in the blue, and the color is made.
9. Rnse Pink.-Brazil wood 1 lb. , and boil it for 2 honrs

1 gal. of water at the end : then strain it and for 2 hoars, having the same water until disalived; when sumbient alnm 1 lb . in the hand, add murate of tin 3 oz When sumpiently cool to admit muisten up to a salvy consistence, ond bare Paris white 12d lbs., them thoronghly together. Let stand 24 when the Arst is cool stil When anyof in their respective above mixtures have stood as mentioned, off the water by placinges, all that is necessary is to drain for that purposc, and then preparations into muslin bags then exposing the mixture to the air, Glass, stone, or wood vessels only should be used, as the acid soon works uponvion, tin, copper, \&c., giving you a tinge not desired in the color, and alxays obscrve that if water is to be mixed with strong acids it must be added slowly, especially if in light vials, or you will break the vessels by means of the gieat heat which is set free by the combination. 1'ainters can use their own judgment about making these colors; but if they do not do it for profit there will be plessure in tosting them, even in vials-full only, as the ohem. ical action is just as fine in small as in large quantities.

## BLACKSMITHS' DEPARTMENT.

 FDLES AND RASPS-To RE-COTDissolve saleratus 4 ozs., to water br a Chemical Process.fles, and boil them in it to water 1 qt.; sufficient to cover the and dry them, now stand them half an hour; then take out, wash water and salphuric acid, in the in a jar, filling it up with rain he proportion of water 1 qt, to acid
If the files are coarse, they will need to remain in about twelve hours; but for fue files, six or eight hours will be all-sufficient. When you take them out, wash them clean, dry quickly, and put a little sweet in! upon them, to prevent.
.
This plan is applicable to blacksmiths, gun-smiths, tinners, copper-smiths, machinists, \&co., \&e. Copper and tin

## DR. CHASE'S RECIPES.

workers will only mqure a short time to take the articles out of their files, as the soft metals with which they become filled, are soon dissolvod, teaving tho files about as good as new. For blacksmithe and asw-mill men, it will require the full time.

They may be re-cut tro or three times, making in all more service than it took to wear out the file at first.

The preparation can be rept and used as long as you see action take place upon putting the file into it. Keep itl covered when not in use.

If persons, when filing, would lift up the file, in carrying back, there would be no necesaity of a re-cutting, but in draving it back they soon turn a wire-edge, which the acid removes. It also thins the tenth. Many persons have doubted this fact; but I know that the common three-square file (used for sharpening saws), when worn out and thrown by for a year or two, may be again used with nearly the same advantages as a now one. Thn philosophy 0 o. it is this -the action of the atmosphere acte upon the same principle of the acid, corrodes (eats off) the surface, giving anew, a square, cutting edge. Try it, all ye drubtful; I have tried both, and know their valuo. Boiling in the saleratuswater removes grease, and allows the soid to act upon the steel.
Varnishes-To prevent Rust un Iroy or Steiet.-Tallow 2 ozs. ; rosin 1 oz ; melt and strain while hot.

Apply a light coat of this, and you mn lay arway any artifles not in constant use, for any length of time, such as kpives and forks, or mechanies' tools which are being laid by or much exposed. But for axes or ather new tools; whioh are exposed to the air before sold, you will find the following varnish preferable:
2. Transparmet for Toors, Plovais, \&o-Best alcohol 1 gal.; gum sandarach 2 lbs. ; gum mastic 1 lb. Place all in a tin can Which admits of being corked; cork it tight, and shake it frequently, occasionally placing the can in hot water. When dissolred it is ready for use.

Thir makes a very nice varnish for new tools, which are exposed to dampness ; the air, even, will soon (more or less) tarnish now work。
3. Eark-No-Fartier, for Inow on Stigh-Ther best samal

## BLACESMITHS' DEPASTMENT.

235
then add nearly as much apise oil to make it feel a lifte greass;
and you will probably seck no forther turtine us thero is of varaish,
4. Transparmet Blue for Steel, Plocans.-Take Demaf-varnish 1 gal. ; finely ground Prussian blus $\frac{1}{2} \mathrm{oz}$; mix tiucroughly.
i. For ground steel ploughs, or other ground steel, one or two coats of this will be found sufficient to give a nice blne uppearance, like highly tempered stecl; some may wish a little more blue; if so, add the Prussian blue to your liking. you will have a cheap varnish, uso No. 4.
5. Black, Havina a Polisi, for Inon.-Pulverized gum asphal the 2 lbs. ; gum benzoine +1 lb ; spirits of turpentino 1 gal. ; to make quick, keep in a warm place and shake often ; shade to suit with finely gromid ivory black.

Apply with a brusia. And it ought to be used on iron exposed to the weather as well as on inside work desiring a nice appearance or polish. Or:
6. V. risish for Inon.-Asphaltum 8 lbs.; melt it in an iron kettle, siowly adding boiled linsced oil 5 gals. ; litharge 1 lb. ; and sulphate of zino $\frac{1}{2} \mathrm{ll}$. ; continuing to boil for three hours ; then add Whark gum amber $1 \frac{1}{2}$ lbs., and continue to boil 2 hours longer. with spirits of turpentine proper consistence, to apply with a brush,
7. I wisu here, also, to state a fact which will benefit those wishing to secure vines or lim.bs of trees to the side of a white house, with nails, and do not wish to see a streal of rust down the white paint, as follows:
Make a hole, In which to start the nail, putting a little strip or zine into the bole, and drive the nail in contact with the zino.
The electrical aetion of the two metals, in contact, prevents rust, proven by over eight years trial.
WELDING-CAst Steel Wrthout Borax.-Copperas 2 ozs. : saltpeire 1 oz . ; common salt 6 ozs.; black oxide of mang inese ${ }^{\text {a }}$ 1 oz. ; l'russiate of potash 1 oz ; all pulverized and mixed with nice welding sand 3 lbs. ; and use it the same as you would enad.
Higher tempered steel can be used with this better than with borax, as it welds at a lower heot-such as pitchifork tines, toe-corks, \&o. The pieces should be held together while heating. I have found some blacksmiths using it
without the manganese ; but from what I know of che puri fying propertics of that articlo upon irou, I am sure it must be proferablo with it, as that iz the principal purifyor in
the nost recipe.

POOR IRON-Tu Implove.- Black oxide of manganeso 1 part ; copporas and common salt 4 parts each ; dissolve in soft water and boil untll dry; whein cool pulverizo and mixix quite freely with
nice welding sand.

When you have poor iron which you cannot afford to throw away, heat it, and roll it in this mixture, working for a timo, ro-heating, \&e., will soon free it from all impurities, which is the causo of its rottenness. By this process you can make good horse-nails, evon out of only common iron.
Writing upon Iron or Steel, Slliter on Gold, Not to Cost - the Texth Pake on a Ount Pea Letten.-Muriatio acid 1 oz. nitilo acld $\frac{d}{d}$ oz. Mix, when it is ready for use.

Dinections.- Cover the place you wish to mark or write upon, with molted bees-wax; when cold, writo the name plain with a file point or an instrument made for the purpose, carrying it through the wax and cleaning the wax ali out of the lettor; thon apply the mixed acids with a feather, carefully filling each letter; let it remain from one to tel. minutes, acoording to the appearance dosired; then put on some water, which dilutes the acids and stops the process. Either of the acids, alone, would out iron or steol, but it requires the mixture to take hold of gild or silver. After you wash off the acids it is best to apply a little oil.
MLL PICKS-To Temprer.-To 6 q ts. of soft water put in purverized corrosive sublimate 1 oz. and two hands of common salt; when disoolved it is ready for use. The first gives toughness to the steel, whilst the latter gives the hardness. I have found tho e who think it betier to add sal-ammonlac, pulverized, 2 ozs., to th above.

Directions. - Heat tho pioks to only a cherry red and plunge them in and do not draw any temper. In working mill-picks, bo very careful not to over-heat them, but work them at as low a heat as possiblo. The reason why so many fail in making good pioks, is that they don't work them nt as low a heat as they sloould. With care upon that point, and the above fluid, no trouble will be experienced, even upon the best aiamoud tursa Be sure to brey the prepara-

## blaORSMITHS' DEPARTMENT.

tion covered when not in use, as it is poison. Pigs or dogs might drink of it if left uncovered. This is the mixture Which has gained me the name of having the best preparation in use for mill-picks, and the certifioutes on this subject, but as I have some others which are very highly spoken of, I give you a few others.
2. An English miller, after buying my book, gave me the following recipe, for which he paid ten dollars. He had used it all his lifo, or from the timo he began business for himself (about thirty jears), and he would uso no

Salt + teacup ; saltpetre $\frac{1}{2} \mathrm{oz}$; alum, pulverized, 1 teaspoon ; soft water 1 gal. ; never heating over a cherry red, nor drawling
any temper.
3. Saltpetne, sal-ammoniao, and alum, of each 2 ozs. ; ealt $1 \frac{1}{2}$ lb. ; water 3 gals. ; and draw no temper.

Thero must be something in this last, as tho next no $I$ obtained at least five hundred miles from where I did this, and both from mon who knew their vaiue, and yet they resemble each other near enough to bo oalled "the twins."
4. Mul-Picks and Saw Gomeries, to Temper.-Saltpetre and 3 gals. Heat to a cherry red and poz. ; sa!t $1 \frac{1}{2}$ lbs. ; ; soft water temper.
The steel must never be heated above a cherry-red, and in working and drawing the picks there ought to be quite an amount of light water-hammering, even after the stecl is quite cool. Once more and I am done; yet it may be possible that tho last in this case may be the best. Read it: Mili-Piok Tempering as Done by Chobch, of Ann Arbor, Water 3 gals.; salt 2 qts. ; sal-ammoniac and saltpetre, of each 2 ozs.; ashes, from white ash bark, 1 shovel, which causes tho pleks I obtained this as silvor.
Mr. Church five dollipe of a blacksmith who paid young showing him how to for it, he coming into the shop and tion-his instructions work the picks, as also the composiflaws; not to heat too he no hammer too cold, to avoid steel, nor to heat more high, which opens the pores of the when tempering. The than one or two inches of the piek heating and working, that no genan says, if care is taken in
equai it, yet he spoiled the first batch by over-heating, even after Mr. Church had taken all pains to show him. They (the Messers. Chureh) have pieks sent to them for tempering, from Illinois and even Wisconsin.

BUTCHER KNIVES-Spring-ímaper and Beautifol Edae.-In forging out the knife, as you get it near to its proper thickucss, be very carcful not to heat it too high, and to water-hammer it as for mill-picks; when about to temper, heat only to a cherry-red, and hold it in such a way that you can hold it plumb as you put it in the water, which prevents it from springing-put it plumb into the water and it will come out straight.

Take it from tho water to the fire and pass it through the blaze until a little hot ; then rub a candle over it upon both sides, and back to the fire, passing it backward and forward in the blaze, turning it over often to keep the beat even over the whole surface, until the tallow passes off as though it went into the steel; then take out and rub the candle over it again (on both sides each time) and back to the fire, passing it as before, until it starts into a blaze, with a snap, being carcful that the heat is even over the whole length and width of the tool, then rub tho tallow over it again and back, for three times, quickly, as it kurns off; and lastly rub the tallow over it again and push it into the dust of the forge, letting it remain until cold.

If these directions are followed with dexterity you will have the temper alike from edge to back; and the edge will be the best you ever saw; as Davy Crocket used to say, "It will jump higher, dive deeper," shave more hogs, bend farther without breaking, and give better satisfaction than all other knives put together.

It works equally well on drawing-knives and other thin tools; and for trap-springs which are to be set on dry ground; but if set in water, "pop goes the weasel" the first time the trap is sprung; but the following is the plan for tempering springs for general trapping:
2. TRAP-SPRINGS-To Temper.-For tempering cast steel trap springs, all that is recessary is to leat them in the Dank just that you may see it is red, then cool them in lukewarm water. This is a short recipe, but it makes long-lasiing springs.

The reason why darkness is required to temper springs is that a lower degree of heat can be seen in the night than by daylight ; and the low keat and warm water give the desired tomper. which are to recelve the plate be flled very smooth; then apply over the surface the muriate of eino, which is made by dissolving sinc in muriatio acid; now hold this part over a dish containing hot soft solder (pewter solder is probably the softest), and with a awab apply the solder to the part, to which it adheres ; brush off all superfloous solder, 80 as to leave the surface smooth; you will now take No. 2 fair, silver plate, of the right size to cover the aurface of the part prepared with solder, and lay the plate apon it, and rub it down smooth with a cloth which is molstened with oil, then, with a soldering-iron, pass slowly over all the surface of the plate, which melts the solder underneath it, and causes the plate to adhere as firmly as the solder does to the iron; then polish the surface, finishing with buckskin.
ough the blaze both sides, and d in the blaze, whole surface, the steel ; then ides each time) It starts into a even over the tallow over it turns off ; and the dust of the
erity you will the edge will d to say, " It ggs, bend farction than all
d other thin 3 set on dry sel" the first the plan for

The soldering-irons must be tined, and also kept very amooth, and used at about the same heat as for soldering tin.家

IRON-Ty Prevent Welding. - Wiere it is desired to weld two bars of iron together, for making axletrees or other parposes, through which you wish to have a bolt hole, without punching out a plece of the iron, you will take a piece of wet pasteboard, the width of the bar and the length you desire not to weld, and place it betwreen the two pieces of iron, and hold them firmly upon the pasteboard while taking the heat, and the iron will weld up to swedge and punch, to the desired size.

In this way blacksmiths' tongs may be relaid, without the trouble of cutting the joints apart and making a new jaw. Simply fit two pieces of iron, the thickness you wish to add to the jaw of the tongs, have them of the right length and width also, then take them both between the jaws and heat them so you can pound them together, that they will fit closely for a weld; now put a piece of the wet pasteboard between the pieces which you are to weld, having the handles of the tongs stand sufficiently apart that you may put on a link or ring to hold all firmly; then put into the fire, and take a good welding heat; and yet they do not weld where the paper was between them ; if they stiok a little at the end, just put them on the swedge and give them a little tap with the hammer, and they will fly right apart as niee ais new. I am toid that the dust from the ground or floor of the blacksmith shop is as good as the pasteboard, yet I have not seen that tried; but I know there is no mily
take in the other; and yet I have found one blacksmitn who declared he would not believe it could be done, even if ho saw it.

CAST-IRON - To Case-Harden. - Castiron may be casehardened by heating to a red heat, and then roiling it in a composition composed of equal parts of prussiate of potash, salammoniac, and saltpetre, all pulverized and thoroughly mixed, then plunge while yet hot, into a bath containing 2 ozs. of the prussiate, and 4 ozs., of the sal-ammoniac to each gal. of cold water.-Scientific Artisan.
2. Cast-Iron-The Hardest, to Soften for Drmulna.-Heat to a cherry red, having it lie level in the fire, then with a pair of cold tonge, put on a piece of brimstone, a little less in size than yon wish the hole to be when drilled, and it softens entirely through the piece ; let it lie on the fire until a little cool, when it is ready to drill.
Sleigh-shoes have been drilled, by this plan, in five minutes, after a man had spent half a day in drilling ono fourth of an inch into it.. It is applioable to any article which can be hented without injury.
WROUGHT-IRON-To CASE-HARDEN.-To case-harden wrought Iron, take the prussiate of potash, finely pulverized, and roll the article in it, if its shape admits of it, if not, sprinkle the powder npon it freely, while the iron is hot.

This is applicable to iron axletrees, by hoating the axletree and rolling the bottom of it in the powder, spread out for that purpose, turning it up quiokly and pouring cold water upon it, getting it into the tub of cold water as quick as possible They will wear for years without showing wear.
2. Welding a Small Piede of Iron Upon a Larae One, with Only a Liaht Heat.-It is often desirable to wold $n$ small bit of iron upon a large bar, when the large piece must be heated equally hot as the small one. To save this:
Take borax 1 lb .; red oxide of iron 1 to 2 ozs. ; meit them together in a crucible; and when cold, pulverize and keep the powder dry for use.

When you want to perform the operation, just bring the large piece to a white heot, horing is good welding heat upon the small slip; take the large one from the fire, and aprinkle some of the powder upon the place, and bring the
other upon it, applying the hammer smartly, and the weld will be as good as could be made with the greater lieat, without the powder.

BRONZING-Fon Inov or Wood.-First, make a black paint then put in a little chrome yellow, only sufficient to give it a dark green shade ; apply a coat of this to the article to be bronzed ; when dry give it a coat of varnish, and when the varnish is a little dry, dust on bronze by dipping a piece of velvet into the bronze and shaking it upon the varnish; then give it another coat of rarnish, and when dry all is complete.

Cast-iron bells, which are now being extensively introduced to the forming community, will bo much improved in their appearance by this bronzing, and also protected from rust, without injury to their sound. Iron fences around yards, porches, verandas, \&o., will be much improved by it. It mav also be applied to wood if desired.

TRUSS SPRINGS-Directions for Blacishitins to Make-Better than tere Patent Trusses.-After laving tried the various kinds of trusses, over two years, having to wear one upon eash side, I gave them all up as worse than useless.

I then went to a biacksmith and had springs made. They were bent to suit the shape of the body, and to press upon the weic only sufficient, after the pads are put on to hold back that which would othervise protrude. The pad upon the baci end of the spring I make of sole leather, covered with cotton or linen cloth, having stuffed in a little batting to make it rest as easy as possible. The front pad I make by having a piece of wood turned the shape and sizo of a small hen's egg, sawing it through
of cloth sewed into a string of suitable width to sit easy where it bears upon the hip, in passing to tie upon the other ond of the spring, just back of the front pad. The bend whiloh is given the spring, before it is bent to the shape of the body, given it room to tise when the leg is raised, without lifting the pad from its position, saving the necessity of another strap to pass around under the thigh, as with the patent truss, which is very annoying to the wearer. Make the springs of spring stcel, about $\frac{1}{2}$ or $\frac{5}{5}$ of an inch in width, and about 1-16 in thickness, and of sufficient length to have a bearing just short of the apine.

I now speak from eight years personal experience, which ought to be a sufficient length of timo for an experiment to be well established

## TINNERS' DEPARTMENT,

BLACK VARNISH-For Coal Bcokets,-Asphaltum 1 lb ; lamp-black $\frac{1 b}{}$. ; rosin $\frac{1}{2} \mathrm{lb}$. ; epirits of turpsntine 1 qt.

Dissolve the asphalturn and rosin in the turpentine ; then rub up the lamp-black with linseed-vil, ouly suffioient to form a paste and mix with the others. Apply with a brush.

JAPAN FLLOW FOR TIN-All Colors.-Gum mandarach 1 ib .; - balsam of fr, balsam of tolu, and acetate of tead, of each $2 \mathrm{ozs} . ;$ linseed-oil $\frac{1}{2} \mathrm{pt}$; spirits of turpentine 2 qts .

Put all into a suitable kettle, oxcept tho turpentine, over a slow fire, at first, then raise to a higher heal until all are melted; now take from the fire, and whon a little cool, stir in the spirits of turpentine and strain through a fine cloth. This is transparent ; but by the following modifications any or all the various colors are made from it.
2. Blacr.-Prussian blue $\frac{1}{2} \mathrm{Oz}$. ; asphaltum 2 ozn ; ; pirits of turpentine $\frac{1}{2} \mathrm{pt}$.

Melt the asphaltum in the turpentine; rub up the blue with a little of it, mix well and strain; then add the whole to one pint of the first, above.
8. Blus.-Indigo and Prussian blue, both finely puiverizeã, of - each $\frac{1}{2}$ oz. ; spirits of turpentine 1 pt. Mjx well and atraln.

Add of this to one pint of the first until the color suits.

## TINNERS' DEPABTMCANT

$t$ easy where it her end of the oh is. given the siven it room to pad from its 0 pass around very annoylng about $\frac{1}{2}$ or $\frac{1}{3}$ of nd of sufficient
arience, which experiment to
phaltum 1 lb ; 1 gt. pentine ; then sufficient to with a brush. nndarach 1 lb .; of each 2 ozs ;
rpentine, over $t$ until all are little cool, stir ha a fine oloth. difications any
; ; apirits of tur-
up the blue add the whole
puiverizeá, of nd atraln. he solor suita.
4. Red.-Take spirits of turpentine $\& \mathrm{pt}$. $;$ add $\mathbf{c o c}$ let stand 15 hours, and strain.

## Add of this to the first to suit the fanoy.

5. Yelow.-Take 1 oz, of pulverized root of curcuma, and stir of it into 1 pt. of the first, until the color pleases you, let stand $a$ few hours and strain.
6. Green.-Mix equal parts of the blue and yellow together, then mix with the first until it suits the fancy.
7. Oravar.- Mix a little of the red with more of the yellow, and then with the first as heretofore, until pleased.
8. Ping.-Mix a litile of the blue to more in quantity of the red, and then with the first until suited.
In this simple and philosophical way you get all the various colors. Apply with a brush.
GOLD LACQUER FOR TIN.-Travsparent, Aul Colors.-Alcohol in a flask in pt .; add gum shellac 1 oz . ; turinerio $\frac{1}{2}$ oz. ; rerlsanders $\frac{1}{4}$ of Seit the flask in a warm place, shake frequevitly for 12 hours or more, then strain off the liquor, rinse the bottle asd return lt , corking tightly for use.
When this varnish is used, it must be applied to the work freely and flowing, or, if the work admits of it, it may be dipped into the varnish; and laid on the top of the stove to dry, which it will do very quickly; and they must not be rubbed or brushed while drying; or the article may be hot when applied. One or more coats may be laid on, as the color is required more or less light or deep. This is applied to lanterns, \&c. If any of it should become thiok from evaporation; at any time, thin it with aloohol. And by the following modifications, all the various colors are obtaince.
9. Rosse Color.--Proceed as above, substituting $\ddagger$ oz. of finely ground, best lake, in place of the turmeric.
10. Blove.-The blue is made by substituting pulverized Prussinn bluo $\frac{1}{2}$ oz. in place of the turmeric.
11. Purplas.-Add a little of the blue to the armas
12. Gramen-Add a little of the rose-color to the first.

Here again philosophy gives a variety of shades with only a slight change of materials or combinations.
LACQUER FOR BRASS.-TransPARRNT.-Tormerlo root, gronng Ane, 1 oza; best dragon's blood id dr. put into alcohol 1 pt. ; place in a moderate heat, shake well for everal days it must ke strained through a linen cloth, and . tise bottle, aved add powdered gim shellao so in \& Prana

## 244

## DR. OHASE'S RECIPES.

place for several days, frequently shaken; then again strained, botiled and corked tight.

Tacquer is put repon metal for improving its appearance and preserving its polish. It is applied with a brush when the metal is warm, otherwise it will not spread evenly.

IRON.-To Tin for Solderina or Other Purposes.-Take any quantity of muriatic acid, and dissolve all the zinc in it that it will cut; then dilnte it with one-fourth as much soft water as of acid, and it is ready for use.

This rubbed upon iron, no matter how rusty, oleanses it and leaves some of the zino upon the surface, so that solder readily adheres to it, or copper as mentioned below for coppering iron or steel.
2. Iron, Iron Wime, or Steel, to Copper the Surface.-Rain water 3 lbs ; sulphate of copper 1 lb . Dissolve.
Have the artioles perfectly clean; then wash it with this solution, and it immediately exhibits a copper sarface.

Letiering on polished steel is done in this way; fowering, or ornamenting can also be done in the same way. Sornetimes dilute muriatic acid is used to clean the surface; the surface must be clean by filing, rubbing, or acid; then rleaned by wiping off.
COPPER.-To Tin for Stew-Disites yn oteier Fcrposes.-Wash The surface of the article to be tinned, with sulphurio acid a and rub the surface well; so as to have it smooth and free of blackness caused by the acid; then sprinkie calcined and Incly pulverized sal-ammoniac upon the surface, holding it over a fire where if will become sufficiently hot to melt a bar of solder which is tn be rubbed over the surface; if a stew-dish put the solder into it and srrab it about when melted.

You will wipe off any surplus solder, and also for the purpose of smoothing the surface, by means of a tow or cotcon swab, tied or tacked to a rod. In this way any dish or copper article may be nicely tinned.
BOX-METAL.-To MAER For Macuriery.-Copper 4 parts ; lead 1 part-zinc is sometimes substituted for the lead-either makes a durable box for journals.

Printers' worn out type in place of the lead, makes an improvement.
 brass 3 parts ; zino one part.
2. Sowivir for Lead. Take tin 1 part; lead 2 parts.
3. Soliner for Tha.-Lead 10 parts ; tin 7 partis. lead 1 part britannial-To Use Old instead of Block Thn, in Solder.Take old Britannia and mell it ; and while hot sprinkle sulphui aver it and slir for a short time.

This burns out the other articles in it, and leaves the bluck tin, which may now be used for making solder as good as new tin.

- TIN-To Pearl on Chrysialize. - Sulphurio acid 4 ozs. ; soft water 2 tc 3 ozs ., according to strength of acid ; salt 1 oz ; mix.

Heat the tin quite hot over a stove or heater; thon with a sponge wet with the mixture, washing off direotly with clean watcr.' Dry the tin; then varnish it with Demarvarnish.
This brings out the chrystaline nature of the tin. Used in making water-coolers, spittoons, \&c.
2. Thining Flux-Improved. - It has been customary for tinnern to use the muriate of zinc only ; but if you take I lb. of muriatio usid, and put in all the zine it will cut; then put in 1 oz . of salseams.

Sonctimes I think it is still improved by adding to it an equal amount of soft water.
3. Liquid Glue for Labelling upon Tin,-Boiling water one quart; borax, pulverized, two ounces; put in the borax; then add gum shellao four ounces, and boil until dissolved.

Labols put upon tin with common glue or common pasto will not stick long. But this preparation obviates the diff-
SCOURING LIQUID-For Brass, Door-Kvobs, \&o.-0 vitriol 1 oz . ; sweet oll 1-2 gill ; pulverized-Kvobs, sco.-Oll of rain water 11-2 pts. ; mix all, and shake as used.en stono 1 gill ; Apply with a rag, and polish with buct. len. This makes as good porsh with buckskin or old wooland for less than half god a preparation as can be purohased, ing, but is simply a seo money. It does not give a coatgives it a silver coating: SILVERING POWDER-FOR COPPRR or WORn Plated Goope Nitrate of silver and common balt, of Worn Plated Goods.of tartar 3 z drs., pulverized finely, mix each $30 \mathrm{grs}$. ; oream for nse.

## 246

When desirod to re-silver a worn spoon or other article, first olean them with the "Scouring Liquid;" then moisten a little of the powder and rub it on thoroughly with a piece of buck-skin. For Jewelry, see "Jewelry Department." OIL Cans.-Size of Sheet, for mon 1 to 100 GallongFor 1 gallon, 7 by 20 inches.

|  | ${ }^{11}$ |  |  | ${ }_{40} 25$ gallons, 80 by 56 inches. |  |  |  |

This inoludes all the laps, seams, \&o., which will be found sufficiontly correct for all practioal purposes.

## GUSSMITHETVG DEPARIT DENK.

GUN-BARRELS-Brownna Proorss.--Spirits of nitre 1 lb .; alcohol 1 lb . ; corrogive aublimate $105 ;$ mis in a bottle and keep corked for uns.

Direations.-Plag both ends of the barrel, and let the plug stick out three or four inches, to handle by, and also to prevent the fluid from entering the barrel, eausing it to rust; polish the barrel perfoctly; then rub it well with quiok-lime by means of a cloth which removes oil or grease; now apply the browning fluid with a olean white cloth, apply one coat and sot in a warm, dark place, until a red rust is formed over the whole surface, which will roquire, in warm weather, from ton to twelve hours, and in cold weather, from fifteen to twenty hours, or until the rust becomes red; then card it down with a gun-maker's card and rub off with a clean cloth; repeat the prooess until the color suits, as cach coat gives a darker shade.
2. Quicker and-hess Laborious Process.- Whilo in Evansville, Ind,, I sold one of my books to O. Keller, a man who carries on gunsmithing, extensively. He gave me the following, which he was using, and says it makes a lark brown, with but little labor compared witt, tho first.
-Soft water 1 qt., and dissolve it in blue vituiol 80 om ; corroaiv.
cublimate 1 ozr ; anil add 1 oz . of spirits of nitre. Have the barrel bright and put on one coat of the mixture ; and in one hour after, put on aiuther, and let the barrel stand 12 tours ; then oil it and rub it with a cloth, of course baving the ends of the parrel tightly plogged, as in the frst piace.
But Mr. Sutherland, tha gunsmith of this city, says the brown from this recipe will soon rub off; none being permanent unless carded down properly, as directed with the first reoipe, that mixture being also superior.
Browning por twisted Barrels.-Take spirits of nitre \% oz; tincture of steel $\frac{\text { g or. (if the tincture of steel cannot be obtained, }}{}$; the unmedicated tincture of iron may be used, but it is not so good) ; black brimstono $\frac{1}{}$ oz. ; blue vitriol $\frac{1}{2}$ oz, ; corrosive sublimate 4 Oz . ; nitrio acid 1 dr ., or 60 drops ; copperas $\ddagger \mathrm{oz}$. ; mix with $1 \frac{1}{2}$ pts. of rain water, keep corked, also, as the other, and the process of applying is also the same.

You will understand this is not to make an imitation of twist barrels, but to be used upon the real twist barrels; which brings out the twist so as to show; but if you use the first upon the real twist barrels, it will make the whole surface brown like the common barrel.
CASE-HARDENING-For Lock-work.-Take old boots and shoes and lay them on a fire, and burn them until charred; now put them into a clean kettle and pulverize them coarsely, while hot; be careful not to get any wood coals mixed with them.
Dirieotions.-Take the pulverized leather and place in a sheet-iron box, placing the artieles to be hardened in the centre of the box, or amongst the pulverized leather, and cover with a sheet iron cover; or make the box so as to shut up; now blow up a fire of very dry charcoal; the coarser the oharcoal the better; then open the fire and place the closed box in the centre, cover it up and let stand from forty to sixty minutes, not blowing; but if the coals burn off and leave the box exposed, you will put no more ; at the expiration of the timo, take tho box and pour its contents into clean, moderately cool or cold water-never use warur water; these articles will now be found very hard, and will easily break; so you will draw the temper to suit.
broken Saws-To Mend Perma sentif.--Pure sherer 19 parts ; pure copper one part ; pure i.rruss two parts ; all are to be aled into powder and intimately mixed.' If the saw is not recently broken, apply the timning preparation of the next recipe.

## DR. OHASE'S RTODPES

Place the caw lovel upon the anvil, the broken edges in close contact, and hold them so; now put a small line of the mixture along the seam, covering it with a larger bulk of powdered charcoal ; now with a spirit lamp and a jewelers ${ }^{\text {t }}$ blow-pipe, hold the coal-dust in place, and blow sufficient to melt tho solder mixture; then with a hammer sot the joint smooth, if not already so, and file away any superfluous solder; and you will be surprised at its strength. The heat upon a saw does not injure its temper as it does other tools, from the fact that the temper is rolled in, in plave of by heat and water.

TINNING-SUPRrior to the Ond Proorss.-Take first, the same as the old way; that is, muriatio acid 1 pt , and as mach pure block or sheet vinc as it will eut, in an epen dish, a bowel, or something of that character, as much heat is set free, and bottles are often broken by it; now take sal-ammoniac 4 ozs., pulverize it and add to the other, and boil ten minutes in a copper kettlebear in mind, only copper is to be used to boil in.

You will find this will cause the solder to flow right along without difficulty. Keep corked tight when not in use.
VARNISH AND POLISH FOR STOCKS-Germin.-Gum shellac 10 ozs.; gum sandarach 1 oz . ; Venice turpentine 1 drachm; alcohol, 95 to 98 proof, 1 gal. ; shake the jag occasionally for a day or two, and it is ready for use.

After using a few coats of this, you can have a German polish, by simply leaving out 8 ozs. of the shellao; and a - coat or two of the polish makes an improvement on the varnish, and does not require the rubbing, that it would if the full amount of shellac was used, in the last coat or two. It is recommended also to put upon outs, sores, \&o., burns excepted.

## JEWELERS' DEPARTMENT.

nsing a good brush-or the "Polishing Compound" No. 3 ; if there are oracks it may bo necessary to put the atlicle in a solution of caustic potash-at all events, every particle of grease and dirt must be romoved; then suspend the article to be plated in the cyanuret of gold solntion, with $n$ small strip of zino cut about tho width of a common knitting needle, hooking the top over a stick which will reach across tho top of the jar holding the selu. tion.

Every five to ten minutes, the article should be takee out and brushed over with the scouring preparation; or on smoorh surfaces it may be rinsed off, and wiped with a pieco of cotton eloth, end return until the coating is sufficiently heary. to suit.

When the plating fluid is not in use, bottlo it, keeping it corked, and it is always ready for use, bearing in mind that it is as poisonous as arsenio, and must be put high out of the way of ohildren, and labeled-Poison, although you will have no fears in using it; yet accidents might arise if its nature were not known. The zino strip, as far as it reaches into the fluid, will need to be rubbed occasionally, until it is bright.
2. Oalvanizina witi a Sifllina Batterf.-I have found some persons who thought it much better to use a simple baftery, made by taking a picce of copper rod about three-cighths of an inch in thickness, and about eighteen or twenty inches long, and bend it as directed below:

The rod should be about 4 or $\delta$ inches in the circle or bend then run parallel. having 5 strips of sheet zinc, an inch wide, and 6 to 8 inches long. bent in their centre around the copper, with a rirct through them, close to the rod, as shown above; these strips of gine sro to be phaced into tumbiers, the rod resting ca top of the tumblers, which are to bo nearly filled with rain water ; then pour in to each tumbler a little oil of vitriol, until you see that K

The artiole to bo plated is to bo suspended upon the strip. of zine fustened unon the long end of the rod, which is to be placed as bofore spoken of, in a jar containing the gold solution, instead of having it upon the stiok spoken of when plating without tho battery. And all the operations are the same as boloro described.
Jeiveliry-Cleanine and Polishing Compodnd.--Aqua nminonia 1 oz. ; prepared clalk $\frac{1}{8}$ oz. ; mix and keep corked.
To use for rings or other smooth-surfaced jewelry, wot a bit of oloth with tho compound, after having shaken it, and rub tho article thoroughly; then polish by rubbing with a silk handkorchief or piece of soft buekskin. Fior artices which are roughtsurfuced use a suitable brush. It is appli. cable for gold, silver, brass, Britanmia-plated goods, \&e.

## FARIIERS' DEPARTMENT.

## Colilo-Cure for Horses or Persons.-Spirits of

 turpentine 3 ozs . ; laudanum 1 oz .; mix, and give all for a doso, by putting it into a bottle with half a pint of warm water, which prevents injury to the throat. If relief is not obtained in ono hour, repeat the dose, adding half an ounce of the best powderod alocs, well dissolved together, and have no uncasiness about the result.Syartoms.-The herse often lies down, suddenly rising again, with a spring ; mirikes his belly with his hind feet, stamps with hif Poro feet, and refuses every kind of food, \&c. I suppose there is no medloine in use, for colic, vither in man or horse, equal to this mixture.
For persons, a dose would be from 1 to 2 teaspoons; children or weak porsons, less, according to the urgency of the symptoms; to be taken in warm water or warm tea. I have been famillai with it for about 5 years, and know that it has been successful in many cases, all where it has been used. Many think it the best colio remedy in the world.
 for a horge give all at a dose, in warm water as above. Dose for
a person, as the firsu.
A Mr, Therot of thom i vobainca this recipe, tells me ho has oured colio in horses, in every case, with the firs
dose, except one, and in than vase wy repeating the uissu thirty minutes after the first. There is no question but what it is good, and sope would prefer it to the turpentine. I know it is valuable.
BOTS-SURE Remedr.-When a horse is attacked with bots it may be known by the occasional nipping at their own sides, and by red pimples or projections on tho inner surface of the upper lip, which may bo seen plainly by turning up the lip.
First, then, take new milk 2 qts. ; molasses 1 qt.; and give the horse tho whole amount. Second, 15 minutes afterwards, give very warm sage tea 2 qts. bastur, 30 minutes after the tea, you will givo of curriers' ${ }^{\prime \prime}$ il 3 pts. (or enough to operate as physio.) Lard has been used when the ofl could not be obtained, with the

The oure will be complete, as the milk and molasses cause the bots to let go their hold, the tea puokers them ap, and the oil earries them ontirely away, If you have any duubt, one trial will satisfy you perfectly, In places whore the cuirricrs' oil cannot be obtaincd, substitute the lard, adding three or four ounces of salt with it; if no lard, dissolve a doublo handful of salt in warm water three pints, and give all.
RING-BONE AND SPAVINS-To Cure.-Egyptiacum and wine vinegar, of each 2 ozs.; water of pure ammonia, spirits of tarpentine and oil of origauum, of each 1 oz.; euphorbium and cantharides, of each $\frac{1}{2} \mathrm{oz}$; glass made ine and sifted through gavze 1 dr. ; put them in a bottle, and when used let them be well shaken. This is to be rubbed upon the bone enlargement with the hand or spatula, for halp an bour each morning, for six or seven mornings in succession. Let the horse be so tied that he cannot get his mouth to the place for 3 or 4 hours, otherwise he will blister his mouth and blemish the part. Then let him run until the scab comes off of itself without scraping, which injures the roots of the hair. Then repeat as before, and follow up for 3 or 4 times blistering, aud all bone enlargements will be re-absorbed, if not of more than a year or two's standing.
It is also good for callous sinews, and strains of long standing, spavins, big-head, \&c., but if there are ring-bones or spavins of so long standing that this does not oause their cure, you will proceed as followe:
2. ADn to the above compound, corrosive eublimate in powder $\frac{1}{2}$ oz, oil of vitriol $\frac{1}{2} \mathrm{oz}$; and cemmon salt $\frac{1}{3}$ oz.; when it is again seady for use, always shaking well as you uso either preparationa

Now clip tho hair and prick the bone or callous part as full of holes as you can with a pegging-awl, which is just long enough to break through the callous part only. Or a better way to break up this bony substanco is to have a handle like a pegging-awl handte, with three or four awls in it, then tap it in with a stick and give it a wrench at the same time, which docs the hurting part with more speed. This done, bathe the part with vinegar, until the blood stops Alowing; then apply the double compound as at first, for four or fivo mornings only, repeating again if necessary; and ninety-nine out of every hundred ring-bones or spavins wili be cured; and most of them with only tu- irst preparation. The Egytiacum is made as follows:
3. Take verdigrls and alum in powder, of each $1 \frac{1}{2}$ ozs. ; biae
itriol, powdered, $\frac{1}{3} \mathrm{oz}$; corrosivo sublimate, in powder, $\frac{1}{} \mathrm{oz}$. ; vinegar 2 1-2 ozs.; honey 1-2 lb.; boil over a slow fre until of a proper consistence. When nsed it must be stirred up well, as a sediment wlll deposit of some of the articles.

If the hair does not come out again after using the last blister, use the "Good Samaritan Liniment" freely, on the part, but the first will never disturb the growth of hair. It is best always to commence this kind of treatment early in the season, so as to effect a cure beforo cold weather comes on.
4. O. B. Bavas' Cura for Rrag-Bons and Spatin--Take o cantharides pulverized, British oil, oil of origanum, and amber, and of spirits of turpentine, of each 1 oz ; olive oil $1-2 \mathrm{oz}$; oil of vitriol 3 drs.; put all, except the vitriol, Into alcohel, atir the mixture, then slowly add the vitriol and continue to stir until the mixture is complete, which is known ly its ceasing to smoke. Bottle for use.

Direotions.-Tie a piece of sponge upon a stiok and rub the preparation by this means, upon the spavin or ring-bone as long as it is absorbed into the parts; twenty-four hours after, grease well with lard ; and in twenty-four hours more, wash off well with soap-suds. Mr. Bangs lives at Napoloon, Mich., and has sold books for me nearly two years. He says one application will generally bo sufficient for spavins, but may need two ; ring-bones alwavs require two or tiree applications, three or four days apart, which prevents the loss of hair; if not put on oftener than onco in three or
four days, the hair not coming out at all. Said to cure wind-galls, splints, \&cc. He obtained five dollars for curing a neighbor's horse of ring-bone with this preparation; stopping all lameness, but not removing the lump.
5. In very bad cases of long standing, he thinks it preferable to first apply the following:
Take alcohol 1 pt. ; sal-ammoniar,, corrosive sublimate, and oil of spike, of each 1 oz ; mix.

Apply by washing off and using lard afterwards, as above direeted, washing also forty-ight hours after; and when dry apply the first liniment once or twice, according to directions. The object of this last is to open the pores of the skin and soften the lump.
6. Rng-Bone Remedx.-Pulverizei cantharides, oils of spike, origanum, amber, cedar, Barbadoes tar, and British oil, of each 2 ozs. ; oil of wormwood 1 oz ; spirits of turpentine 4 ozs. ; common potash $\frac{1}{2}$ oze; nitric acid 6 ozs ; and oil of vitriol (sulphuric acid) 4 ozs. ; lard 3 lbs.
Direotions.- Melt the lard and slowly add the acids, stir well and add the others, stirring until cold. Clip off the hair and apply by rubbing and heating in; in about three days, or when it is dine running, wash off with suds and apply again. In old cases it may take three or four weeks, but in recent cases two or three applications have cured. It has cured long standing cases.
7. Rawson's Riva-Bone and Spayin Cure.-Venice turpentine and Spanish fies, of each 2 ozs. ; euphorbium and aqua ammonia, of each 1 oz . ; red precipitate 1-2 oz. ; corrosive sublimate $\downarrow \mathrm{oz}$. lard '1 1-2 lbs. Pulverize all and put into the lard ; simmer slowly over coals, not scorch or burn, and pour off free of sediment.
: Directions. - For ring-bones, cut off the hair and yub the ointment well into the lumps onoe in forty-eight hours. For spavins, once in twenty-four hours for three mornings, has perfeatly cured them. Wash well each application, with suds, rubbing over the plase with a smooth stick to squeere sut a thick yellow/matter.

Mr. Ramson, of Rawsouvilio, Bīioh., has oured some exceedingly bad cases of ring-bones, one as thick as a man's arm; and spavins as unpromising in size. If properly cooked it will fuam like boiling sugar.
8. Indiay Merriod.-Bind a toad upon it or two, if one doen not cover $1 t$, and keep it on from 8 to 10 day
An Indian cured a horse in this we, , near St. Louis, for which he coveted, and reoeived a riffe be cure proved permanent.
9. Bone-Spaying-Frence Pasts- $\$ 300$ Rectye-Corrosive sablimate, quicksilver, and lodine, of each 1 oz ; with lard only sufficient to form a paste.

Diseotions.-Rub the quicksilver and iodine together, then adding the sublimate and finally the lard, rubbing thoroughly.

Shave off the hair the size of the bone enlargement; then grease all around it, but where the hair is shaved off; this prevents tive action of the medieine, only upon the eparin; now rub in as much of the paste as will lie on a three cent pioce only, each morning for four mornings only; in from seven to eight days the whole spavin will come out; then wash out the wound with suds, soaking well, for an hour or two, which removes the poisonous effects of the medicines and facilitates the healing, which will be done by any of the healing salves; but I would prefer the green ointment to any other in this case.

Mr. Andrews, late of Detroit, who, during his life, knew a good horse, and also desired to know how to take good care of them, did not hesitate to pay three hundred dollars fur this recipe after seeing what it would do; he removed a spavin from a mare's leg with it, and she afterwards won him more than the expense.
10. Bone-Spavins.-Norwegian Cúre.-S. B. Marshall, the Champion Horse-Shoer and Farrier, of White Pigeon, Mich., obtained this plan of an old Norwegian Far: rier, and also his plan of curing poll-evil, which see, and assures me that he had been very successful with them. I obtained them of him for the purpose of publication, and sincerely think I ean recommend them to all who need them :
Take dog's grease 1-2 pt. ; best oll of origanum 11-2 ozs. ; pulverized cantharides 1.2 oz . Mix and apply each norning, for threes moruings ; heating it in with a hot fron each time ; then skip 3 mornings, and apply again, as before, until it hiss been applied 9 times; after which wait about ten days, and if it is not aill gone, co over again in the same way.

He says it does not remove the hair, but that it cures the largest and worst, cases. IIe gives a test for good oil of origanum, saying that much of it is reduced with turpentine; and if so reduced, that it will spreall on the skin, like turpentine; but if good, that it does not spread on the skin, but stands, like, other oil, where a drop is pat on. I am not certain abont the genuineness of this test; yet I find quite a difference in the spreading of the cils; for that whioh is known to contain turpentine spreads fast and freely; whilst that which is believed to be pure, spreads very slowly, yet does finally spread. The pare is of a dark wine color, whilst oor is of a lighter shade, and somewhat cloudy.
11. Spavin Linnoent.-Oils of spike, origanam, cedar, British and spirits of turpentine, of each 1 oz . ; Spapiah-fies, puiverized, 02.

Apply once in six to nine days only - Nemove the lump of spavins, splints, curbs, \&cc., if of recent occurrence; and the man of whom I obtained it, says he has scattered pollevils befome breaking out; with cedar oil, alone.
12. Avorier.-Alcohol and spirits of turpentine, of each $\frac{1}{2}$ pt. $;$ pam camphor, landanum, and oil of cedar, of each 1 oz ; oils of uemlock and rhodium, and balsam of frr, of each $\frac{1}{\mathrm{j}} \mathrm{oz}$; ; lodine 1

Apply night and morning, first washing clean and rub: bing dry with a sponge; then rub the liniment into the spavin with the hand. It causes a gummy substanee to ooze ont, witlout injury to the hair-has cured ring-bones, also removing the lumps in recent cases. It cured the lameness in a case of three years standing.
13. Splinr and Spaynn Linment.-Take a large mouthed bottle and pat into it oil of origanum 6 ozs. ; gum camphor 2 ozs. ; mercurial ointment 2 czs. $;$ iodine ointment 1 oz ; melt by putting the bottle into a kettle of hot water.
Apply it to bone-spavins or splints twice daily, for four or five days. The lameness will trouble you no more. I have had men cure their horses with this linimont and re-
 of the book.
14. Bog-Spatin and WindGall Onytient, arso cood for Currs, Splints, Ring-Bonke, and Bona Spavin-Take pulvertred cantharides 1 or a marourial ointmant 2 ozs ; tiuciure of

Iodine 12 oz ; spirits of turpentine 2 ozs ; corronive mblimate 13 dres, lard 1 lb .
Mix well, and when desired to apply, first ors off the hair, waeh well and anoint, rubbing it in with the hand or glove if preferred. Two days after; grease the part with lard, and in two days more, wash off and apply the ointment again. Repeat the process every wook, as long as necessary.
SWEENY.-Linment.-Alcuhol and spirits of turpentine, of each 8 ozs. ; camphor gum, pulverized cantharldes, and capsicum, of each 1 oz ; oil of spike $3 \mathbf{~ o z s . ~ M i x . ~}$

Perhaps the best plan is to tinoture tho capsicum first, and use the tinoture instead of the powdor, by which means you are free of sediment; bathe this liniment in with a hot iron. The first case has yet to be found where it has not sured this disease when faithfully followed.
2. Avotare.-Sal-ammoniac 2 ozs. ; corroslve subllmate 1 or. ; alcohol 1 qt. ; water 1 qt., pulverize and mix.

This last recipe cured many casos of swoony, 1 nd also kidney complaints, known by a weakness in the bad ", of horsea or cattle. Bathe the loins with, it; and give ale to two table-spoons at a dose, daily.
POLL-EVIL AND FISTULA-Posirive Oung,-Oommon potash $\frac{1}{2}$ ou. ; extract of belladona $\frac{1}{2}$ dr. ; gum arablo $\quad \mathrm{oz}$. Dissolve the gum in as little water as practicable ; then liaving pulverized the potash, unless it is moist, mix the gum water with itt. and it will soon dissolve ; then mix in the extract and it is roady to nise $;$ and it can be used wiithont the belladona, but it is more painful without it, and does not have quite as good an effect.
Direotions.-The best plan to got this into the pipes is by means of a small syringo, after having oleansed this sore with soap-suds; repeat onee in two days, until all tho cal. lous pipes and hard fibrous base around tho poll-ovil or fis, tula, is completeiy destroyed. Mr. Curtis, a merohánt of Wheaton, Ill., cured a poll-evil with this preparation, by only a singlo application, as the mare estrayed and was not found for two months-then completoly sound; but it will generally require two or three applicationg.

This will destroy corns and warts, by putting a little of it unou the wert or coriz, lettivg it ramain from five to ten minutes, then wash off and apply oil or vinogar, not aqueesing them out, but letting nature remove thom.
2. Potasir, to Mare.-If you cannot buy the potash, called for in the last recipe, you can raake it by leaching best wood ashes and boiling down the ley to what is called black salts, and continning the heat in a thick kettle until they are melted; the boat burns ont the black impurities and leaves a whitish grey subsivance
called potash.

This potash, pulverized and put into all the rat holes about the cellars causes them to leave in double quick time, as mentioned in the "Rat Exterminator." The black salta will do about as well for rats, but is not quite so strong. They get their feet into it, which causes a biting worse thap their own, and they leave without further ceremony.

Potash making in timbered lands is carried on very ex. tensively; using the thick, heavy potash kcttle to boil and selt in ; then dipping it out is three and five pail iroa
kettles to cool.
mate 1 or. ;
d also kidof horses de to two and neck with two or three blankets; have 3 pan or kettle of the best warm cider vinegar ; holding it under the blanikets ; then steam the parts by putting hot stones, brick, or iron, into the vinegar, and continne the operation until the horse ewreats fre-y, accomplisurd. 3 mornings and skipping 3 , nntil 9 steamings have been
Mr. Marshall says, the pipes by this time, will seem to have raised up and hecome loose, except the lower end, which holds upon the bonc or tendons, like a sucker's mouth; the apparent rising being caused by the going down of the swelling in the parts; now tie a skein of silk around th - yipes and pull them out; washing the parts with weak sopperas water until the sore heals ap and all is well. He Iold me that he cured, in this way, a horse which had interfered until a pipe had formed at the place of interference, apon the leg, that when drawn out was as long as his finger. See the "Norwegian Cure for Bone-Sparin."
4. Avotrer-Rock salt and blue vitriol, of each 1 or. ; copperis 10 ; pulverize all finely and mix well.
Fill a goose quill with the powder, and push it to the bottom of the pipe, having a stick in the top of the quill, co that you ean puith the powner out of the quill, leaving it at the bottom of the pipe; repeat again in about four days, and in two or three days from that time you can take hold of the pipe and remove it without trouble.

## DR. OHARE'S REOIPTRS.

Poll-Evil, to Soatter.-Take a quantity of mandrake root mukh, and boil it; strain and bcil down until rather thick; then torm an nintment by simmering it with sufficient lard for that purpose.

Anoint the swelling once a day, for several days, until well. It has cured them after they were broken out, by putting it into the pipes a few times, also anointing around the sore.
6. Avorrare, - Polleviis and Fistulas have been cured by pushing a piece of lunar caustic into the pipe, then filling the hole witb curriers' oll. Or:
7. Avotrarr-Corrosive sublimate, the size of a common bean 3qalverized and washed in tissue paper, and pressed to the bottom (a the pipes, leaving it in eight days, then take out, and Orplying the blue' ointment (kept by druggists) has curad them-
8. Avorirr-Arsenic, the size of a pea, treated in the same wry, has cured the same disease. But if the Norwegian plan will Work as recommended, it is certainly the best of all.
9. Anoracr.--Cil of vitrill put into the pipes has cured mans poll-evils.

I found one man, albu, who had cured poll-evil by placing a barrel of water about fifteen fect high, on a platform, upon two trees-administering a shower bath daily upon the sore; drawing the water by a faucet, through a diuner horn placed little end down ; tying the horse so as to keep him in posi. tion until all the water runs out. Fifteen or twenty baths cured him, but it broke out again the next scason, when a few more baths made a final cure.
LOOSENESS OR SCOURING in HORSES OR CATTLIF-L Ose ofer Seventy Ye.his. - Turmentil root, powdered. Dose for : horse or cow 1 to 1 1-2 ozs. It may be stirred his pt. of urilk an!? given, or is may be steeped in $11-2$ pts. of milk, then given from 3 to 5 timep laily until cured.

It hoy proved valuable also for persons. Dose for a purwon woud bo from one-half to one tcaspoon stecped in milk; but if ased for persons I should recommend that half ar much rhuburb be combined with it.

An English gentleman from whom it was obtained, had ben familiar with its use nearly eighty years, aud ucver Luew a failure, if taken in any kind of semonable time The tormentil, or septfoil, is an European plant, aud very estringent. pulverize finely; then give one table-spoon in some dry feed, 8 times daily, until checked.

This preparation has thirty years experience of an American gentleman, near Fentonville, Mich., to recommend it to general favor.
3. Soovrs ant Pin-Wonks of Horsizs ind Cattin.-Whilo ash bark burnt to nosles, and made inte rather a strong ley ; then $\frac{m i x}{} \frac{1}{2}$ paty. of it with warn water 1 pt., and give all 2 or 3 timen
Whenever it becomes certain that a horse or cow in ${ }^{1}$ troubled with pin-woims, by their pessing from the bowelh, it is best to adminster the above, as they are believed to bo the cause, generally, of scours, and this remedy carrien of the worms, thus curing the inflammation by removing the cause.
horse ointment.-De Grat or Slonn's-Rosin 40 om $;$ bees-wax 4 ozs. ; hurd 8 ozs. ; honey 2 ozs. Melt these artiolen flowly, gently bringing to a boil, and as it begins to boll, remove from the fire and slowly add a little less than a pint of spirits until cool.

This is an oxtraordinary ointment for bruises, in flesk or hoof, broken knees, galled backs, bites, cracked heels, \&o., \&c.; or when a horse is gelded, to heal and keep away flien, It is excellent to take fire ont of burns or scoalds in human flesh also.

CONDITION POWDERS.-SAD to me St Joen's,-Fenugreek, cream of tartar, gentian, sulphur, saltpetre, rosin, black entimony, and ginger, equal quantities of each, say 1 oz; ; all to be anely pulverized; cayenne also ine, half the quantity of any one of the othern, eay $\frac{1}{2}$ oz. Mix thorcughly.
It is used in yellow water, hide-bound, coughs, oolds, cistemper, and all other diseases where condition powders aro generally administered. They carry off gross humors and purify the blood. Dosn-In ordinary cases give two teaspoons once a day, in feed. In extreme cases give it twioe daily. If these do not give as good satisfaction as 8 St . John's or any other condition powder that costa more titan ioubie what it does to make this, then I will acknowledge that travel and atady are of ne acconnt in obtaining infos. mation.
2. Oamianito Conimion Pownir.-Gamboge, alam, saltpetre, rosin, copperas, ginger, aloes, gum myrrh, maltia and aalt, and if the horse is in a ver'y low condition, put in worm-wood, all the same quantities, vle, 1 oz each. Dosm-Oue table-ppoon in bran twice daily; not giving any other grain for a fow days ; then once u day with oats and other good feod.
This last is more applioable for old worn-down horsees which need oleaning out and starting again into now lifo; and in such oases, just the thing to bo dosired.

## HORSE LINIMENTS-For Stimy-Nzok prom Polx

 Evils.-Alcohol one pint; oil of codnr, origanum, and gum-camphor; of each two ounces; oil of amber one ounod; use freely.2. Exalisa ©table Linment-Very Strono.-Oll of spike, aqua ammonia, and oil of turpentine, of each 2 ozs. ; siveet oil and oil of amber, of each $1 \frac{1}{2}$ ozs. ; oil of origanum 1 oz. Mix.
Cail this gnod for any thing, and always koop it in the stable as a strong liniment; the Englishman's favorite for poll-evils, ring bones, and all old lameness, inflammations, 8co. ; if much inflammation, howevor, it will fetch the hair, but nut destroy it.
3. Nerve and Bont Lidmant.-Take beeff gall 1 qt.; alcohol 1 pt. ; volatile liniment 1 lb . ; spirits of turpentine 1 ib . ; oil of origanum 4 ozs. ; aqua ammonia 4 ozs. ; thncture of cayenne $\frac{1}{2}$ pt.; oill of amber 3 ozs.; tincture of Spanish flies 0 ozs. ; mlx.
Uses too well known to need desoription. This is more particularly applicable to horse flesh.
4. Linimant for One Shlinng 1 Quart--Best pinegar 2 qus. saltpetre, pulverized $\frac{1}{2}$ lb; mix and set $\ln$ a warm place until uissolved.
It will be found valuable for spavins, sprains, strains, bruises, old swellings, \&o.
broken Limbs-Treatiment, Instead of Inionaniy Shooting the Hogse.-In the greater number of fractures it is only necessary to partially sling the horse by means of a broud piece of eail or other strong oloth (as reprosented in the figure), placed under the animal's bolly, furnished with two breechings and two breast-girths, and by means of ropes and pulleys attached to a cross-beam above, he is elovated or lowered, as may be required.
It Fould seldom bo niegessary to raise them ontirely of their feet, as they will be more quiot, tenerally, whem
allowed to touch the ground or floor. The head-stall should be padded and ropes reaching eaoh way to the stall, as well as forward. Many horses will plunge about for a time, but soon quiet down, with an occasional exception; when they become quiet, set the bone, splint it well, padding the splints with batting, securing carefully, then koop wet with cold water, as long as the least inflammation is present, using light food, and a little water at a time, but may be given num, and ne ounod;
it in the vorite for amations, the hair,
; alcohol b. ; oil of nne $\frac{1}{2} p \mathrm{pt}$;
is more
lace until
, strains,
Shooting only neoud plece - figure), reechings illeys at may be
irely off y, whem

If he is very restive, other ropes can be attached to the corner rings, which are there for that purpose, and. will afford much additional relief to the horse.

I knew a horse's thigh to crumble upon the race-course, without apparent cause, which lost him the stake he would have easily won; he was hauled miles upoin a sleü, slung, and cured by his humane owner. Then let every fair means be tried, before you consent to take the life, even of - broken-logged home.

## DR. OEMSE'S REOTPMS.

WOUND BALSAM-For Horam or Howns Flager,-Guin dencoine, in powder, 6 ozs. ; balsam of tolu, in powder, 3 ozu. ; gum Clorax 2 ozs, frankincense, in powder, 2 ozs. ; sum myrrh, in powder, 2 ozs.; Socotorino aloes, in powder, 3 ozs.; alcohol 1 gal. Mix them all together and pat them in a digester, and give them a gentle heat for three or four days ; then strain.

A better medicine can hardly be found in the Materia Medica for healing fresh wounds in every part of the body, particularly those on the tendons or joints. It is frequently given internally along with other articles, to great advantage in all colds, flatulency, and in other debilities of the stomach and intestines. Every gentleman, or farmer, ought to keep this medicine ready prepared in his house, as a family medicine, for all euts, or recent wounds, either among his cattle or any of his family. Thirty or forty drops, on a lump of sugar, may be taken at any time, for latuleney, or pain at the stomach; and in old age, where aature requires stimulation. - Every Man his Own Farrier. GREASE-HEEL AND COMMON SCRATCHES.-To Curm. Ley made from wood ashes, and boil white-oak bark in it unuil it it ie quite strong, both in ley and bark ooze ; when it is cold, it is ready for use.
First wash off the horse's legs with dish water or castile soap; and when dry, apply the ooze with a swab upon a stick which is sufficiently long to keep out of his reach, as hê will tear around like a wild horse, but you must wet all well once a day, until you see the places are drying up. The grease-heel may be known from the common scratches by the deep cracks. which do not appear in the common kind. Of course this will fetch off the hair, but tbe disease has been known to fetch off the hoof; then to bring on the hair again, use salve made by stewing sweet elder bark in old bacon; then form the salve by adding a little rosin ac. cording to the amount of oil when stewed, about a quartar of a pound to each pound of oil.
2. Asorazr.-Verdigria $\ddagger$ oz. ; whisky 1 pt, are highly recom. mended for grease-heel.
3. Connon Soratoriss.-Use sweet oll 6 ozs, borax 2 ozs.; sugar. of lead $2.02 s$. mix , and apply twice daily, after washing of with dich-water, and give time to allow the legs to dry.

These plans have been used for years, by George Clemm, of Iegangport, Indiana, and he assured we that the worsi onses will be cured, of either disease, in a very fow days?
mari,-Gum benpr, 3 oun. ; gum gum myrrh, in ; alcohol 1 gal. and give them a
a the Materia $t$ of the body, C $t$ is frequentto great addebilities of an, or farmer, his house, as ounds, either nirty or forty any time, for Id age, where Oron Farrier.

4. Axotuer. - Copperas and chamber-ley are known to be good fir common scratches, applied, as the last, after washing with obtained, and If it does nis last can be tried frst, as it is easily other.

SADDLE. AND HARNESS GATLS
Remedy.- White lead and linseed oil mixed as for praistons, do.Invaluable in abrasions, or galls from mixed as for paint, is almost any other cause, it will speedily ald the the saddle or collar, $\sigma$. From Applied with a bush to part in healing. coating of hair and skin of the leg of a horse, tho outor beal and leave no scar. It is was torn off, caused it to sores upon horses, or other animad for soratches and all men. It forms an air-tight coals, and equally good foo Every farmer should keep a coating, and soothes pain, White lead is the carbonate of pot and brush ready for use. very white. That having a greyish tint and when pure is generally adulterated. For use os a tint is impure, being produced by adding lamp-blase as a paint, a load color is by adding burned umber.

In applying it for soratches, firs. wash them clean with soap and water, then apply. Some persons prefer lamp-oil. If that is used, you will mix both together until the oil as. sumes a light straw color. When the horse comes in at aight his legs should be washed perfectly clean and rubbed perfectly dry. Then apply the mixture, rubbing it well to perfect care, no matter how bad the case may be.-Correspondence of the Country Gentleman.
To give confidence in this, I would say that a lady, at Lafayette, Ind., told me she cured herself of alt-rheum with white-lead and sweet oil only.
2. Another.-Alcohol and extract of lead, of each, 2 ozs. ; son Water 4 ozs. ; spirits of sal-ammoniac 1 oz.; white copperas ; son Mix all, and shake as used.
"Knowlson's Completo Farricr" apeaks very highly of abs last preparation, whion swa be tried, shoud the first above fail.
3. Sones rrom Chafing of ziza Bitio-Chioroform and sulphurio ethor, equal parts of each. Keep closely corked.
Sponge off the mouth with water every time the bita are,
aken out; then wet well with the mixture. It wiu also 10 found valuable to remove soreness from any cause, on ban or horse.
4. "Avorurr. - White ashes and spirits of turpentine, of each $11-2$ table-fpoons ; Wack pepper, ground, 1 tahle-spooin; lard to mako 1 pt. of fill, mix well and anoint.

IIEAVES.-Great Relief.-Heaves, the common name for any difficulty in the breathing of a horse, is suseeptible of great alleviation by attention to the character and quantity of food to be eaten by the animal, as every ono knows. If a horse suffering from this discase, is allowed to distend his stomach at his pleasure, with dry food entirely, and then to drink cold water, as much as he can hold, he is nearly worthless. But if his food be moistened, and he be itlowed to drink a moderate quantit" anly at a time, the disease in much less troublesome.
A still further alleviation may be obtaincu from the use of balsam of ir and balsam of copabla, 4 ozs. cach; and mix with eaicined magnesla suffflelently thick to make it into balls; give a middling slzod ball night and morning, for a week or ten days. This gives good satisfaction, and is extensively sold by Eberbach \& Co., druggista, of thls city.
2. Anotier.-An old Farrier assures me that lobelia one teaspoon, onoe a day, in his feed, for a week, and then onee a week; that you can hardly tell whether the borss ever had the heaves or not.
3. Anotier.-H. Sisson, ninother Farrier, gives me a cure which somewhat resembles the ball first given under this head, and thus each one supports the other.
He takes oaloined magnesia, balsam of fir, and balsam of oopabla, of dach 1 oz. © spirlts of turpentine 2 ors. and and putsthem all into one pint of cider vinegar, and gives for a dose 1 tablespoon in bis feed, once a day for a week; then every other day for $\alpha$ two or three months.

Tho horse will cough more at first, but looser and looser until cured. Wet his hay with brine, and also wet his feed.
4. Avorier,-Mr. Bangs highly recommends the following: Lobella, wild turnlp, elecampane, and skunk cabbage, equal parts of each. Mako into bails of common size, and give one for a dose, or mnko a tincture, by puting forr euntio of the mixiaro inio $\frac{1}{6}$ qts. of spirtts; and after a week put 2 tablespoons into their feed, once a day for a month or two.

## HARRLERA' DERARTAENT.

205 6. Another.-Oystor shells 1 peck; burn into lime and pui. verizu ; ulx a single Landful of it with 1 gill of alcoliol, then inlx it-with the oats each morning until all is given.

This, for bellows heaves, has done very much good. Hurse radish grated and put in with the feed has benefitted. Cabbare, as common feed, is good to wlicvo, or any juicy. loud, like pumpkins, \&c., \&c., will be cound in relieve very irnch. Fiaruers who have their horser alway thome hom keep theu confortable with some if tho for yoing direc. tions; but broken-sinded horses might 24 w.it be knocked in the heid as to uttenpt to travel with :.em, expecting any sutisfuction to horse or driver.
6. Anoticer.-A correspondent of the Country Gentla. man says that "heaves may be greatly alleviated by feeding rave fat pork.
"Commence with a piece of pork, say a cubic inch, chopped
rery line, and mixed with the wetted grain or cit feed, twiee a
day, tor two or threo days. Then from day to day incresse the
quanlity and cut less finc, until there is given with each feed such
a slice as usually by a fiumer's wife is cut for frying-dearly as
later as your haud, cut into fifteen or twenty pleces.
"Continue this for tivo weeks, and the horsc is capable of any ordinary work without distress, and without showing the heaves. I have experience and observation for the past ten jears as proof of the above."-[J., of Burlington, $V_{c_{0}}$
DISTEMPER-To Distinguish and Cure.-If it is thought that a horse has the distemper, and you do not feel certain, wet up bran with rather strung weak ley-if not too strong they will eat it greedily; if they have the distemper a free discharge from the nustrils and a consequent cure will be the result, if continued a few days; but if only a cold, with swellings of the glands, no change wil! be discovered
shoeing horses-For Wineer Travel-N. P. Willis, of the Home Journal, in cne of his recent Idlewild. letters says:
"You have discovered, of course, that you cannot have nnin.
terrupted winter riding with at hexie shoư in the ordinary way.
find siarp points of the frozen mud will wound the frog of the
leots s a hard with saow on the ground, the hollow hoof soon col-
leots a hard ball, which makee the footing very insecure. But

## DR. CIIASE'S RECIPES.

these evits aze remedied by a piece of soie leather nailed on nnder the shoe-a protection to the hoof which makes a surprising difference in the confilence and sure-footedness of the animal's step."

FOUNDER-RemedT.-Draw about 1 gal. of blood from the neck; then ärench the horse with linsced oil 1 qt . ; now rub the fore legs long and well, with water as hot as can be borne without scalding.

This remedy entirely cured a horse which had been foundered on wheat two days before the treatment began.

PHYSIC--BALL Yor Horses.-Barbadoes aloes from 4 to 5 or 6 drs. (according to the size and strength of the horse) ; tartrate of potassia 1 dr . ; ginger and castile soap, of each 2 drs. ; oil of anise or peppermint 20 drops; pulverize, and make all into one ball with thicik gum solution.

Before giving a horse physio, he should be prepared for it by feeding sealded bran, in place of oats, for two days at least, giving also water which has the chill taken off, and - continue this feed and drink, during its operation. If it should not operate in forty-cight hours, repeat balf the dose.
2. Parsarg for Cattle.-For cattle, take half only of the dose. above, for a horse, and add to it glauber salts 8 ozs. ; dissolve all in gruel 1 yt., and give as a drench; for cattle are not easily mauaged in giving balls, neither is their construction adapted to dry medicino.

There is not the need of preparation for cattle, generally, as for honses, from the fact of their not being kept up to grain, if they are, however, let the same precautions be observed an in "Physic Ball for Horses."

HOOF AIL IN SHEEP-SUR? Remmpy.-Muriatic acid and butter of antimony, of each 2 ozs ; white vitriol, pulverized, 1 oz. Mix.

Dirmarions.-Lift the foot and drop a little of it upon the bottom. It will need to be applicd only once or trwice a week-as often only as they limp, which shows that tho foot is beocining tender again. It kills the old hoof, and a new noe soon takes its place. Have no fears about the result; apply tho medicine as often as indicated, and all is cafe.

It has proved valuablo in growing off horse's hoofs, when anagryed, or contr tion made it necessary.
hY: Water-For Frirges and Cattle:-Alcohol 1 tablo apmon ; extract of lead 1 ceascroon ; rain water 1-4 pt.

## FARRIERS' DEPARTMENT.

Wash the eye freely, two or three times daily. $B$ prefer the "Eyc Water" as prepared for persons; and a me here to say that what is good for man, in the line of medicine, is good for a ${ }^{2}$ - se , by increasing the dose to cor : respond.

TAMING-Princoracs Applied to Wild and VIcious Horses.-I have thought; in closing up this $\mathrm{D}_{0}$ partment, that I could not devote a page to a better parpose than to the so-called secret of taming. For it is a secret, but it lies in a different point from what is generally believed, which I will attempt to show.
Several persons are advertising books for taming wild horses, and other 'persons are gning about teaching the art to classes in private. Probably the pupils get their money's worth. But, why do so many fail? The whole secret lies in this, that many persons can never handle a horse, with all the instruction in the world-it is not in them. They cannot establish a sympathy between themselves and the horse, and if they become horse trainers, they have only mistaken their calling, and the money they laid out is perhaps as cheap a way as they could be taught their mistake.

To be a successful horse trainer, he must have a sympathy with the horse and a personal power of control. This reminds us of. an old gentleman's remarks on the subject. of sweeny. He said: "There were a great many recipes of penetrating oils, applications, etc., but the great secret was in faith," without which no person will persevere a sufficient length of time with either of them. "This holds goed in all diseases, as well as in handling or taming a Lares.

Tho saysteny or seoret, then, is in knowing how, and having tive stamina (power) to do it.
As for recipes, they oonsist in using th3 horse-oastor or wart, which grows upon the inside of the leg, grated fine, oil of cumin, and oil of rhodinm, kept separate in air-tight bottles; these all possess po :n'ivr properties for attracting and sabduing animinls.
"Rub a little oil of vumta rem your hand, and eppreath the horse in tive fieid, on the windward side, so that he can smell the cumin. The horse will lot yuu oome up to him without troublo.
"Immediately rub your hand gently on the horse's nose, getting a little of the oil on it. You can then lead him anywhere. Give him a little of the castor on a piece of loaf sugar, apple, or potato.
"Put eight drops of the oil of rhodium into a lady's thimble. Take the thimble between the thumb and middle finger of your right hand, with the fore finger stopping the moath of the thimble to prevent the oil from running out, whilst you are opening the mouth of the horse.
"As soon as you have opered the horse's mouth, tip the thimble over upon his toingue, and he is your servant. He will follow you like a pet dog. Very doubtful.-Author.
"Ride fearless and promptly, with your knee pressed to the side of the horse, and your toes turned in and heels out; then you will always be on the alert for a shy or sheer from the horse, and he can never throw you.
"If you want to teach him to lie down; stand on his nigh or left side; have a couple of leather straps, about six feet long; string up his left leg with one of them around his neek; strap the other end of it over his shoulders; hold it in your hand, and when you ave ready, tell him to lie down, at the same time gently, firmly, and steadily pulling on the strap, touching him lightly with a switch. The horse will immediately lie down. Do this a few times, and you canmake him lie down without the straps.
"He is now your pupil nad friend. Yoy can teach him anything, only be kind to him-be gentle. Love him and he will love you. Feed him before you do yourself. Shelter him well, groom him jourself, keem him clean, and at night always give him a good bed."
It will be perceived, by reference to the following; item from Bell's Life, that the secret for taming horses, by which Mr. Rarey has made himself so rich and famous, instead of being a divination of his own, was probably obtained by him through some accidental contact with an old volume. which had long disappeared from observation, and hardly held a place in publio libraries :

A correspondent sends us the following: "In the Gen$1762^{\circ}$ (onem hand by Bartlett (sixth edition), published din $1762^{\circ}$ (one handred years ago), page 293 is the following: -Tha method proposed by.Dr. Bracken is to tie up one of
the foro feet clese, and to fasten a cord or small roye about the other fetlock, bringing the end of it over the horse's shoulders; then let him be hit or l cked with your foot behind that kuce, at the same time pulling his nose domn strongly to the manger. You will bring lim upon his knees, where he should be keld till he-is tired, whiel cannot be long, but if he does not lie down soon, lot him be thrust sidewiys against his quarters, to throw him over; by forcing him down eeveral times in this way, you may teach him to lie down, at the same words you first used for that purpose." You will see that Mr. Rarey's system is exactly the same.
From the foregoing it will be seen that ho obtaired the knowledge, and naturally possessing the firmness, fearless energy and muscle sufficient to back the whole, he has become the horse tamer of tive world.
Without all these qualifications no noe need undertake the business, no maiter how often he pays five dollars for
recipes or instruotions

## CABINET MAKERS' DEPARTMERT.

POLISH.-For Netr Forninure.-Alcohol, 98 per cent.; 1 pt.; gums copal and shellec, of each 1 oz .; dragon's blood, $\frac{1}{2} \mathrm{oz}$. Mix and dissolve by setting in a warm place.

Apply with a sponge (it is best in the sun or a warm room) about three coats, one directly after the other as fast as dry, say fifteen to trrenty minntes apart; then have a small bunch of cotton batting tied up in a piece of woollen; wet this in alcohol and rub over the surface well ; now go over the surface with a piece of tallow, then dust on rottenstone from a woollen bag and rub it with, what is often called, the heel of the hand; now wipe it off with entton oloth, and the more you rub with this last oloth, the better will be the polish.
hurthough this profosses to be for new work, it does not hurt the looks of old, not the least bit; try it all. who want their furniture to show a gloss and answer the place of look. ing glasses.

If soldiers wul try it on their gun-stooke, they wul find it just the thing desired.
2. Pouish for Revivina Old Furnture, Equal to the "Brotres Jonathan."-Take alcohol 1i oza,; bplinte of naltita (muriatic uoid), $\frac{1}{2}$ oz.; linseed oil, 8 ozs. ; best vinegar, ipt. ; and butter of antimony, $1 \frac{1}{2}$ ozs.; mix, putting in the viuegar last.
It is an excellent reviver, making furnituro look nearly equal to new, and really giving polish to new work, always shaking it as used. But if you cannot get the butter of antimony, the following will be the next best thing:
3. Pousbi for Removina Stanns, Spots and Mimdew yrou Furan-turx-Take of 98 per eent. alcohol, $\frac{1}{2}$ pt.; pulvarized rosin and gum shellao, of each $\ddagger$ oz. Let these cut in the alcohol; then add linseed oii, $\frac{1}{2}$ pt.; shake well and apply with a sponge, brush or cotton flannel, or an old newspaper, rubblyg it well after the application, whlch gives a nice polish.
These are just the thiag for new fusniture when sold and about to be taken out of the shop; removing the dust and giving the new appearance again.
4. Jet, or Polish for Wood or Leatian, Bmor, Red, or BlueAlcohol ( 98 per cent.), 1 pt.; sealing-wax, the coior desired, 3 aticks dissolved by heat, and have it warm when applled. A eponge is the best to apply it with.
For black on leather it is best to apply nopperas water first to save extra coats; and paint wood the color deaired also, for the same reason. On smooth surfaces, use the tallow and rotten-stone, as in the first poliah. It may be applied to carriage-bodies, cartridgo-boxes, dashes, faney baskets, straw bonnets, straw hats, \&o.
furnture.-Finshivg with only Onh Coat on Varnish, not dsing Gloe, Paste, or Shelino. -Take bolled haseed oil and give the furniture a coat with a brush; then Immedlately sprinkle dry whiting upon it and rub it in well with your hand, or a brush Which is worn rather short and stiff, over all the surface ; the Whiting absorbs the oil, and the pores of the wood are thus filled With a perfect coat of putty, which will last for acen ; and water will not apot it nor have any effect upon It.
For mouldings and doep creases in turnod pork, you oan mix them quite thick, and apply thom together, with the old brush, but on smooth surfaces, the hand and dry whiting are best. If black walnut is the wood to bo finished, you will put a trifle of burned umber in the whiting-if for cherry, a little Veuetian red; beech os maplo will re-

## OABINENT MAKHRS' DEPABTMIRNT.

quire less red. Only sufficient is to be used, in either case, to make the whiting the color of the wood, being finished. Bedstead-posts, bannisters, or standards, for bedsteads and all other turned articles can have the finish pat on in the lathe, in doub:3 quiok time; spreading a newspaper on the lathe to save the scattering, whiting, applying it with the hand or hands, having an old cloth to rub off the loose whiting which does not enter the pores of the wood ; the same with smooth surfaces also.

This preparation is oheap; and it is a wonder that furniture men have not thought of it before. Three coats of varnish without it is not as level as one with it, from the fact that some of the varnish enters the pores of the wood and does not dry smooth; but with the pores filled with this preparation, of courr it must dry smooth and level, without rubbing down.
Stains-Mahogany on Walnot, Natoral as Naturf... Apply aqua fortis loy means of a rag tacked to a stick; for if you use a brush it will very soon destroy it. Set the furniture in the hot sun to heat is the aqua fortis, if no sun, heat it in by a stove or
arr.

It is betier if heated in, but dnes quite well without heating. Finish up in every other way as usual.

This finish is applicable to fanoy tables, stands, lounges, coffins, \&e., and equally beautiful on knots and crotches, giving walnut the actual appearance of mahogany, and as it is appcarances only that most people depend upon, why will uhis not do as well as to transport timber from beyond the seas?
Rose-Wocd Stain, Tery Bright Shade, Usedid Cold.-Take A!colol 1 gal. ; camwood 2 ozs. ; let them stand in a warm place 2 hours ; then add extract of logwood 2 ozs. ; aqua fortis 1 oz. ; and when dissoived it is ready for use; it makes a very bright ground, like the most beantiful rose-wood-one, two. or more coats, as you desire, oyer the whole surface.
This part makes the bright streaks or grains; the dark ones are made by applying, in waves, the following:
Take irole turnings or èippings, and put vinegar upon them; let it etand a few hours and it is ready to apply over the other, by means of a comb made for graining; or a comb made from thinnish India rabber; the teeth should be rather good length? say half an inch, and cut olose together or further apart as do. sived ; and with a little practice, expellent imitation wll bo made

## DR. CHABE'S REOIPELS

This, for ohairs, looks very beautiful to apply the dinkening mixture by means of a flat, thin-haired brush, leaving only a little of the red color in sight; and if you want to make the cringles, as sometimes seen in rose-wood, it is done with a single tooth or pen, bearing on sometines hard and then light, \&o., \&o. All san and wust be got by praotioe.

The above stain is very bright. lower ebude, nse tho next recipe. 3 Fostwoon evis-lume
Food und recimoni chips, ond SEADE.-Take equal parts of logmuke a stront win. praty boil well in just sufficient water to oz even 8 coats mar beppy it to the furniture while hot; 1 or 2 , ing to the depti of color desired.
For the dark lines use the iron chippings as in the above recipe. Or, if a rosepink is desired, use the following:
4. Rose-Ping, Satin and Varnish, also cesed to imitate Rose-Wood- Put an ounce of poiash into a quart of water, witil redsanders $1 \frac{1}{2}$ oz. ; extract the color from the wood and strain; then wood stain for rose-wood imitation by quick fire-used upon log-
g.. Black Walinut Stain.-Whenever persons are using walnut whioh has sap edges, or if two pieces are being glued together which are different in shade, or when a poplar pannel, or other wood is desired to be used to imitate black walnut, you will find the following to give excellent
Spirlts of turpentine 1 gal. ; pulverized gum asphaltum 2 lhs. Put them into an iron kettle and place upon a stove, which provents the possibility of fre getting at the turpentine, dissolvo by heal,
while $h o t$.
When desired to use any of it, pour out and reduce with turpentine to the right shade for the work being stained. With a little practice you can make any shade desirec 'f used with a brush over a red stain, as mentioned in tb wood stain recipes, nepecially for chairs and \} 'ste, it very nearly resemble tisat wood. Mizing a lit a it with the turpentina ting, and causes it to dry quicker. By rubbins \& fitwo lamp blaok with it you oan make a perfeot blacis,

## OABLNET MAKKARS' DEPARTMENTI.

6. Cimrrar Stans.-Take rain water 3 qts.; anotta 4 ors. ; boil In a copper kettle until the anotta is dissolved: then put in a plece of potash the size of a common walnut, and keep it on the fire abont half an hour longer, and it is ready for use. Bottle for keeping.

This makes poplar and other light-colored woods so near the color of cherry that it is hard to distinguish; and even improves the appearance of light-colored cherry.
VARNiShes-Rlack; witi Aspialtcm.-Spirits of turpentine 1 gal. ; pulverized gum asphaltum $2 \downarrow$ los. ; dissolve by heat oven a stovo firo.

It is applied to iron, frames of door plates, baok-grcunds in crystal painting, etching upon glass, and also for fencewire, or screens which are to go into water above mills to turn leaves and drift-wood, \&c.
1 2. Patent Varnisi for Wood on Cantas.-TTake spinite of turpentine 1 gal. ; asphaltum 2 l lbs. ; put them into an iron kettle which will fit upon a stove, and dissolve the gum by heat. When dissolved and a little cool, add copal varnish 1 pt, and hoiled linseed-oil $\frac{1}{2}$ pt. ; when cold it is ready for use. Perhaps a little lamp-black would make a more perfect black.

If done over a common fire, the turpentine will be very likely to take fire and be lost; and, perhaps, fire the house or your clothes.

This is valuable for wood, iron or leather; but for oloth first make a sizing by boiling flax seed ono quart, in water one gallon ; applying of this for the first coat ; the second coat of common thick black paint; and lastly a coat of the varnish. Some think that sperm oil, the same quantity, makes a littlo better gloss.
3. Varnish Transparent for Wood.-Best alcohoì 1 gal. ; nlce gum shellac 21 1-2 lbs: Place the jug or bottle in a eituation to ,keep it just a little warm, and it will dissolve quicker than if hot. or left cold.

This varnish is valuable for ploughs, or any other artiole - where you wish to show the grain of the wood, and for pine, when you wish to finish up rooms with white, as the "Porceloin Finish; " a coat or two of it cffectualiy prevents.the pitch from ooring out, whioh would stain the finish.
If this stands in an open dish, it will becomo thick by evaporation ; in such oases add a little more alcohol, and it is as grod as before. -Some do use as much as three and a

## DR. CIIASE'S REOTPES.

half pounds of shellao, but it is too thick to spread well; tette: apply two or more coats, if necessary. When a black varnish is wanted, you can rub lamp-black with this, for that purpose, if preferred bofore the asphaltum, last - iven.

## BARBERS' AND TCILET DEPARTMENTT.

Hatk Dye-In Two Nembers.-No. 1. Take gallo acla $\frac{1}{2}$ oz.; teohol 8 ozs. ; soft water 16 oza. ; put the acid in the alcohol, then aide the water.
No. 2. Take for No. 2, crystalized nitrate of silver 1 oz . ; ammonia, strongest kind, 3 ozs. ; gum arubbo \& oz. ; soft water 6 ozs. Dhserve, in making it, that tho sllver is to be put into the ammoia, anif not corked until It is dlssolved; tho gum is to be disolved in the water, ihen all mixed, and it is ready for use.
Baibers will probably make this amount at a time, as it somes much cheaper than in small quantities; but if families or others, for individual use, only wish a little, take drachms instead of ounces, which, you see will make only one-eighth of the amount.

Direotions for Applying.--First, wash the whiskers or hair with the "shampoo," and rinse out well, rubbing with a towel until nearly dry; then with a brush apply No. 1, wetting completely, and use tho dry towel again to rcmove all superfluous water, then with another brush (toothbrushes are best), wet every part with No. 2, and it beoomes instantaneotisly black; as soon as it becomes dry, wash off with hard water, then with soap and water; apply a little oil, and all is complete.

The advantages of this dye aro, that if you get any stain upon the skin, wipe it off at the time, and the washing romoves all appearances of stain, and the whiskers or hair never turn red, do not crook, and are a beautiful black.

However, cyanuret of potasium 1.dr., to 1 oz of water, will take off any stain upon the skin, arising from nitrate of siliver; but it is poison, and silould not touch sore places nor be left where ohildren may got at it. less trouble in using, than the restoratives; for when once applied, nothing more necds being done for several weeks; whilst the restoratives are only slow dyes, and yet need several applications. But that all may have the chance of choosing for themselves, I give you some of the best resto
ratives in usc.
HAIR RESTORATIVES AND INVIGORATORS.-EQUAL TL Wood's, for $\triangle$ Triphna Cost.-Sugar of lead, borax, and lao sulphur, of each 1 oz . ; aqua ammonia $1-2 \mathrm{oz}$; alcohol 1 gill gill ; fine table saltt 1 table-spoon ; soft water 3 pts ; bay rum 1 bergamot 1 oz .

This preparation not only gives a beautiful gloss, but will cause hair to grow upon bald heads arising from all common causes, and turn grey hair to a dark color.
Manner of Application.- When the hair is thin or bald make two applications daily; until this amount is used up, unless the hair has come out sufficiently to satisfy you before that time; work it to the roots of the hair with a soft brush or the ends of the fingers, rubbing well each time. For grey hair one application daily is sufficient. It is larmlesn, and will do all that is claimed for it, does not sost only a triffe in comparison to the advertised restoratives of the day; and will be cound as good or better than most of them.
2. Invigorator.-Vinegar of cauulurides 1 oz ; cologne-water 1 oz.; and rose-water 1 oz., mixed and rubbed on the roots of the hair, until the sciulp smarts, twice daily, has been very highly If thended for bald heads, or where the hair is falling out. If there is no fine hair on the scalp, no restorativo, nor invigorator on earth ean give a head of hair. See remarks after No. 8.
3. Another.-Lac-sulphur and sugar of lead, of each 1 dr . tannin and pulverized copperas, each 32 grs. ; rose water 4 ozs. $;$ wetling the hair once $n$ tay for 10 or 12 days, then once or twice a week will keep up ti," olor.
If it is only desirsd to change grey hair to a dark color the last will do it ; but where the hair is falling out or has already failen, the first is required to stimulate the scalp ta healthy action.
4. Anormar,-Lao Jphur and sugar of lead, of each 1 ox.1

## 876

## D. Cirask's keotrys.

pulverized litharge, (called lithrage) 11 -2 ozs. ; rain water $1 \mathrm{qt}$. ; applying 3 mordiugs and skippling 3, until 9 applications-gives a nice dark color.

I obtained this of one of the Frienire, \& Richmond, Ind., and for turning white or grey hiur, it is a goou one. The lith $r g e$ sots the color as the sulphate of iron does in the nest. There is but littlo choice between them.
5. Anotuer.-hain water 6 ozs. ; lac-sulphur. 1-2 oz.; sugar of leat 1-4 oz. ; sulphate of iron (copperas), 1-8 oz. ; flavor with berganot essence, if desired ; and apply to the hair daily until suff. cioutiy dark to please.

All the foregoing restoratives will ohange, or color the egrey or whito hair black, or nearly so; but let who will tell you that his restorative will give your hair its original color, Sust let that man go for all he is worth at the time; for as time advances his worth will be boautifully less.
6. Hair Invigorator.-A Wheeling barber makes usi of the following invigorator to stop hair from falling out, or to cause it to grow in ; it is a good one, so is the ono following it:
Tako bay rum pr. ; alcohol 1-2 pt. ; castor oil 1-2 oz. ; carbo. nate of ammonia 1-4 oz. ; tincture of cantharides 1-2 oz. Mix, and shake when used. Use it daily, until the ond is attained.
7. Another.-Carbonate of ammonia 1 oz ; rabbed ap in 1 pt of swivet oil. Apply daily until the hair stops falling ont, or is sufficiently grown out
This last is very highly spoken of in England, as a producer of hair, "where the hair ought to grow," and doea not.
8. Strong sage tea, as a daily wash is represented to stop hair from falling out ; and what will stop is from fall ing, is an invigorator and cousequentig gocd.
There is not a liniment men " eed in this book, but which if well rubbed upon the seal $p$, $f$ f two or three months, will bring out a good head of - ir; wen the scalp has besome glossy and shining, however, and no fine hair growing, you may know that the hair folliole or root is dead; and nothing can give a head of hair in such cases, any more than grain can grow from ground which has had none scattered upon it. This condition may be knowa by tie siniuing or glistening appearance of the soalp

## DR. ORASE'S REOIPES.

Inest textures, for the simple reason that its affinity is for grease or oil, changing them to soap, and thus loosening any substanco with which they may bo combined.
If it is put upon a bed-bug ho will nover step afterwards; and if put into their crevices, it destroys their eggs and thus drives them from the premises.
A oloth wot with it will san remove all the grease and dirt from doors whioh are much opened by kitchen-hands.
2. Renovatina Clotaes-Genithenen's Wear.-To warm soft water 4 gala, put in 1 beef's gall; sa haratuis i lb. Dissolve.
Lay the garment on a bench, ind scour every part thoroughly by dipping a stiff brush into the mixturo; spots of grease and the colar must be done more-thorough, and longer continued than other parts, and rinse the garment in the mixture by raising up and down a few times, then the same way in a tub of soft cold water; presis out the water and hang up to dry; after which it needs brushing the way of the nap and pressing well under a damp oloth.
Beof's gall will set the color on silks, woollen, or cottonone spoon to a gallon of water is sufficient for this purpose. Spotted bombazino or bombazetto wached in this will also look nearly equal to new.
3. Faded and Worn Garments-To senew the Coldo.-To alcohol 1 qt., add extract of logwood 1 ib. ; loaf sugar 2 ozs. ; blne vitriol $\ddagger$ oz. ; heat gently until all are dissolved ; bottle for use.
Diamotions.-To one pint of boiling water put three or four teaspoons of the mixture, and apply it to the garment with a clean brush; wetting the fabrio thoroughiy; let dry; then suds out well and dry again to prevent crocking; brush with tho nap to give the polish. This may be applied to silks and woollen goods having colors; bat is most applicable to gentlemen's apparel.
COLOGNES-Imperial-Take oils of bergamot I oz. ; neroli 1 dr. ; jesamine $\ddagger$ oz. ; garden lavender 1 dr. ; cinnamon $\dot{b}$ drops ; tincturo, ot benzoin $1 \frac{1 z}{} \mathrm{oz}$; tincture of musk $\ddagger \mathrm{Oz}$; deodorized or cologne alcohol 2 qus. ; rose water 1 pt. Mix.
Allow the proparation to stand several days, shaking oocasionally, before filtering for use or bottling. This is rather expensive, yot a very nice article. See "Rose Water." 2. Coincone fon Famy Use-Chmapra,-Oils of rowamary

z. ; neroli 1
in 5 drops; odorized or
haking oois is rather Tater." namon 8 drops; clove and rose, each 15 drops; common alcohol 2 qts. Mix, and shake two or three times daily for a week.

Colognes need only be used in very small quantities; the same is true of highly flavored oils or pomades, as too mueh even of a good thing soon disgusts thoso whom they wore intended to please.
hair oils--New Yorx Barbers' Star.-Castor oil 61 pta.; alcohol $1 \&$ pts. ; oll of citronella ; oz. ; lavender $\ddagger 0 z$. ; mixed and shaken when used, makes one of the finest oils for the hair now in
I have been told this amount of alcohol does not out the oil. Of course, we know that; that is it does not become clear, neither do we want it to do so ; it combines with the oil, and destroys all the gumminess and flavor peculiar to castor oil, by which it becomes one of the best oils for the hair which can be applied. Gills, spoons or any other measure will do as well, leeping the proportion of flavoring oils; and if the citronella oannot be got, use some other oil in its place; none are equal to it, however.
2. Mhoassar, or Rose.-Olive oil 1 qt.; alcohol 27 ozs. ; rose oil $\frac{1}{2}$ dr. ; tie chipped-alkanet root 1 oz ., into 2 or 3 fittle muslin bags; let them lie in the oil until a beantifal red is manifested ; then hang them up to drain, for if you press them you get out: sediment you do not wish in the oil.
3. Fragrant, Hoxc-Made.-Collect a quantity of the leavea of any of the flowers that have an agreeable fragrance or fragrant leaves, as the rose, geranium, \&c.; card thin layers of cot. ton, and dip into the finest sweet oil ; sprickle a small quantity of salt on the flowers; a layer of cotton and then a layer of flowers until an earthen-ware vessel, or a wide mouthed glass bottle is

Tie over it a piece of a bladder; then place the vessel in the heat of the sun; and in fifteen days a fragrant oil may be squeezed out, resembling the leaf used. Or, an extract is made by putting alcohol upoa the flowers or leaves, in about the same length of time. These are very suitable for the hair, bat the oil is andoubtedly the best.
4. Pomade-0x-Marrow.-One of the most beautiful pomades, both in color and action is made as follows:
Take beef 's marrow 1 lb ; olkanet root, Eet chipped, 1 oz. ; put them into a suitable vessel and stew them as yon would render tallow: strain through two or three thickaesmes of munsir, and

## 280

## DR. OHASE'S REOLPES.

then and, of castor oil +lb . ; bav muiii i gill : which takes awny the peculiar freshness of the marrow ; then use the extract of the common rose-geraneum to give it the flavor desired.
Half as much suet as marrow, also makes a very nice artiole; and can be used where the marrow is not easily cbtained.
BALM OF A THOUSAND FLOWERS.-As strange as it may seem, some of the most astonishingly named artioles, are the most simple in their composition. Although thousands of dollars have been made out of the above named article it is both cheap and simple.
Deoderized alcohol 1 pt. ; nice white bar soap 4 ows. ; shave the soap When put in ; stand in a warm place until dissolved; then each $\frac{1}{2} \mathrm{dr}$.
It is recommended as a general perfume; but it is more particularly valuable to put a little of it into warm water, with whioh to cleanse the teeth.
RAZOR STROP PASTE.-Take the very flnest superfine fiour of emery and moisten it with sweet oil ; or yon may moisten the surface of the strop with the oil, then dust the flour of emery upon it, which is perbaps the best way.
Nothing olse is necded. You must not take any of the coarse flours, nothing but the finest will do. It is often mised with a little oil and much other atuff whioh is of no use, and put up in little bozes and sold at two shillings, not haviag more than thres cents worth of emery

## BAKERS' ANE COOKING DEPARTMENT.

Memarks.-It may not be considered out of place to make a few remarka here, on the art, as also on the principles, of cookery, for nearly all will zoknowledge cooking not only to be an art, but a science as well. To know how to cook economically is an arij. Making money is an art. Now is there not more money made and lost in the kitchen than almost anywhere else? Does not many a harch-wurk ing man have his substance wasted in the kitchen? Doeg

not many a shiftless man have his substanco saved in the kitchen? A carcles: ${ }^{\text {a }} \mathrm{k}$ ean waste as much as a man can carn, which might a sell be saved. It is not what wo earn as much as what save, that makes us well off. i long and happy life is the rewaid of obedience to nature's lawe; and to be independent of want, is not to want what we do not need. Prodigality and idleness constituts a crime against humanity. But frugality and industry, combined with moral virtue and intelligence will insure individual happiness and national prosperity. Economy is an institute of Lature and enforced by Bible precept: "Gather up the fragments, that nothing be lost." Saving is a more difioult art than earning; some people put dimes into pies and puddings, where others only put in cents; the cont dishes are the most healthy.
Almost any woman can cook well, if she have plenty with which to do it; but the real science of cooking is to be nble to make $\mathrm{i}^{4}$ This is what our few recipes shall assist you in doing.

As to the principles of cooking, remember that water cannot be made more than boiling hot-no matter how much you hasten the fire, you cannot hasten the cooking 0. meat, potatoes, \&c., one moment; a brisk boil is suffivicut. When meat is to be boiled for eating, put it into boiling water at the beginning, by which its juices are preserved. But if you wisi to extract these juices for soup or broth, put the meat, in small pieces, into cold water, and let it simmer slowly.

The same prineiple holds good in baking, also. Make sthe oven the right heat, and give it time to bake through, is tho truo plar; if you attempt to hurry it, you only burn, instead of cooking it done.
If you attempt tho boiling to hurry, the wood only is wasted.
But, io attempting the baking to burry, the food, as well, lisn't tit to be tastod,
CaKES-Federar. Cake.-Flour 2 1-2 lbs.; pulverized whito sugar $11-4 \mathrm{lbs}$; fresh butter 10 ozs ; 5 eggs well beaten ; carbonate of ammonia $\frac{1}{8} \mathrm{oz}$. ; water 1.2 pt . ; or milk is besi, if you have it.

Grind down the ammonia, and rub it with the sugar. Rub the butter into the flour; now make a bowl of the flour (unless you choose to work it up in a dish), and pat

## 282

## DR. OHASE'S REOIPES.

in the eggs, milk, sugar, \&ce., and mix well, and roll out to about a quarter of an inch in thickness; then cut out with a round sutter, and placs on tins so they touch each other; and instead of rising up thicker, in baking, they fill up the space between, and moke a square looking cake, all attached together. While they are yet warm, drench over with white coarsely pulverized sugar. If they are to be kept in a show-case, by bakers, you can have a board as large as the tin on which you bake them, and lay a dozen or more tins. ful on top of each other, as you sprinkle on the sugar. I cannot see why they are ealled "Ferieral," for really they are good enough for any "Whig."

Ammonia should be kept in a wide-mouthed bottle, tightly corked, as it is a very volatile salt. It is known by various names, as "volatile salts," "sal-volatile," "hartshorn;" "hartshorn-shavings," \&e., \&e. It is used for smelling bottles, fainting, as also in baking.
2. Rovai-and-Ready Cake.-Butter or lard 17b. ; molasses 1 qt.; soda 1 oz. ; milk or water 1-2 pt.; ground ginger 1 tablespoon ; and a little oll of lemon ; four sufficient.
Mix up the ginger in flour, and rub the butter or lard in also; dissolve the soda in the milk or water; put in the molasses, and use the fiour in which the ginger and butter are rubbed up, and sufficient more to make the dough of a proper consistence to roll out; sut the oakes out with a long and narrow cutter, and wet the top with a little molasses and water, to remove the flour from the cake; turn the top down, into pulverized white sugar, and place in an oven suf: ficiently hot for bread, but keep them in only to bake, not to dry up. This, and the "Federal," are great favorites in Pennsylvania, where they know what is good, and have the means to make it; yet thoy are not expensive.
3. Sponge-Caxe witi Sour Mme.-Flour 3 cups; fine white Qpooz.

## Dissolve the sajeratus in the milk; beat the eggs sepa

 rately; sift the flour and sugar; first put the sugar into the milk and eggs, then the flour, and stir all well together, using any flavoring extract which you prefor, 1 tenepocitlemon, however, is tite most common. ## BARERS' AND COOETNG DEPABTMENT.

is atirred in, put it immediately into a quick oven; and if it is all put into a common square bread-pan, for which it makes the right amount, it will require about twenty to thirty minutes to bake; if baked in small cakes, propertionately less.
4. Sponge Care with Sweet Mile.-As sour milk cannot always be had, I give you a sponge cake with sweet milk:
Nice brown sugar $1 \frac{13}{2}$ caps; three eggs; ewwect milk 1 cup ; flour 3h cups; oream of tartar aná soda, of each 1 tea-spoon; ; lemon
Thoroughly beat the sugar and eggs together; mix the oream of tartar and soda in the milk, stirring in the flavor also; then mix in the flour, remembering that all cakes ought to be baked soon after making. This is a very nice cake, notwithstanding what is said of "Berwick," below.
5. Berwict Sponge Cari Without Mine--Six eggs; powdered white sugar 3 cups; sifted flour 4 even cups; cream of temon. 2 teaspoons; cold water 1 cup; soda 1 teaspoon; one
First, beat the eggs two minutes, and put in the sugar and beat five minutes more ; then stir in the cream of tartar and two cups of the flour, and beat one minute; now dissolve the soda in the water and stir in, having grated the rind of the lemon, squeeze in half of the juice only; and finally add the other two cups of flour and beat all ciee minute, and put into deep pans in a moderate oven. There is considerable beating about this cake, but if itself does not beat all the sponge cakes you ever beat, we will acknow. ledgo it to be the beaten cake, all around.
6. Surprise Caze.-One egg; sugar one cup; butter 1-2 cup ; speet milk 1 cup; soda 1 teaspoon; crean of tartar 2 tear
spoons.

Flavor with lemon, and use sufficient sifted flour to mako see its bulk and beauty.
7. Soaar Cake. - Take 7 eggs and beat the whites and yolks separately; then beat well together ; now put into them sifted white sugar 1 lb .; with melted butier $1-2 \mathrm{lb}$., and a small teaspoon of pulverized carbonato of ammonia.
Eitir in just sufficient sifted flo rolled out and sut into cakes. flour to allow of its being

## DI. OLLASE'S HECLIEES.

 8. Givaiser Care.-Molasses 2 cups ; butter, or one-half lard if you ohoose, $11-2$ cups; sour millk 2 oupm ; ground ginger 1 teaspoon; saleratus 1 heaping teaspoon.Mash the saleratus, then mix all these ingredients together in a suitable pan, and stir in flour an long as you can with a spoon; then, take the hand and work in moro, just so you can roll them by using flour dusting protty freely; coll out thin, cut and lay upon your buttered or floured tins; then mix ono spoon of inolasses and two of water, and with a small brush or bit of cloth wet over tho top of the with a this removes the dry flour, oauses the tho of the cakes; brown and keeps them moist; pus the oakes to take a niee ten minates will bako thom if put into a quick ovon, and Do not dry them all up but the ovon is sufficiently hot. browned. $u$, but tako out ass soon as niooly

We have sold cakes out of the grocery for years, but never found any to give as good satisfuotion as these, either rich and light for all cake eatore.
9. Tea on Cup Care.-Four egge ; nloo brown nugar 2 cups; saleratus 1 teaspoon; sour milk 3 cups; melted butter or half lard 1 cup; Lalf ${ }^{2}$ grated nutmeg ; llour.

Put the eggs and sugar into a suitablo pan and beat together; dissolve the saleratus in the milk and add to the eggs and sugar; put in the butter and nutmeg also; stir all well; then sift in flour sufficient to muko the mass to such a consistence that it will not run from a tho mass to such upon it. Any one preferring lemon an a poon when lifted sutmeg. Bake rather slowly. 10. Cake, Nice, without Eags or Milie-A vory nice eake is made as follows, and it will koop also: ing 1 teaspoon of saleratus dissolved in it. 1 lb ; water $1-2 \mathrm{pt}$; havRoll thin, and bake on tin sheets.
11. Pork Cake, without Butter, Milk or Eaas. A most delightful cake is mado by the use of pork, which saves the expense of butter, eggs and milk. It mast be tasted to be appreoiated; and another advantage of it is that you can make enough some leisure day to last the season through; and moist.

## batmarg' and coormia derabticen.

ork, whien st be tasted is that you a through;

Fat ealt pork, entirely free of lean or rind, chopped so ine as to be almost like lard 1 ib . ; pour boiling water upon it $\frac{1}{2} \mathrm{pt}$.; ralsins seeded and ohopped 1 lb . ; citron shaved into shreds $\frac{2}{2} \mathrm{lb}$.; sugar 2 cnps ; molasses 1 cup; saleratus 1 teaspoon, rubbed fine and put into the molasses. Mix these all together, and stir in sifted flour to make the consistence of common cake mixtures; then stir nutmeg and cloves finely ground 1 oz . each; cinnamon, also fine, 2 ozs. ; be governed about the time of baking it by put. ting a sliver into it-when nothing adheres it is done. It should be baked ilowly.

You can substitute other fruit in place of the raisins, if desired, using as much or as little as you please, or none at all, and still have a nice cako. In this respect you may call it the accommodation eake, as it accommodates itself to the wishos or circumstances of its lovers.
When pork will do all we hore cleim for it, who will longer contend that it is not fit to eat? Who?
12. Oider Cake.-Flour 6 cups ; sugar 3 cups; butter 1 cup; 4 eggs ; cider 1 cup ; saleratus 1 teaspoon; 1 grated nutmeg.
Beat the eggs, sugar and butter together, and stir in the flour and nutmeg; dissolve the saleratus in the cider, and stir into the mass, and bake immediately, in a quick oven.
13. Givaer Snaps.-Butter, lard and brown sugar, of each ib. ; molasses 1 pt. ; ginger 2 table-spoons ; flour 1 qt .; saleratus 2 teaspoons ; sour milk 1 cup.
Melt tho butter and lard, and whip in the sugar, molasses and ginger; dissolve the saleratus in the milk, and put in; then the flour, and if needed, a little more flour, to enable you to roll out very thin; cut into small cakes and bake in a slow oven until snappish.
14. Jeliy Care.-Five eggs ; sugar 1 cun ; a little nutmog ; saleratus 1 teaspoon ; sour milk 2 cups; flour.
Beat the egga, sugar and nutmeg together; dissolve the 'saleratus in the milk, and mix; then stir in flour to mate only a thin batter, like pan-cakes; three or four spoons of the batter to a common round tin; bake in a quick oven. Three or four of these thin eakes, with jelly between, forms one cake, the jelly being, spread on while the cake in warm.
15. Rolu, Jeiny Care, - Nice brown sugar $1 \frac{1}{2}$ cups; 3 egge; sweet skim milk 1 cup ; flour 2 cups, or a little mora only; eream
 Thoroughly beat the eqgas and sagar togethér; mix the

vear ago. one year the cake

Batter, sagar, English currants, eggs and flour, of each 6 lbs. Mix as in the "Bride Cake."

Bake in about six cakes, which would cost from one dollar and fifty cents to two dollars a pieoe, if bought for the ocoasion.
37. Frostiva, or Icina, for Cakes.-The whites of 8 egga beat to a perfect froth and stiff; pulverized white sagar 2 lbg. starch 1 table-spion; pulverized gum arabic $1-2 \mathrm{oz}$; the juice of

Sift the sugar, starch, and gum arabie into the beaten egg, and stir well and long. When the cake is cold lay on a coat of the frosting; it is best not to take much pains in putting on the first coat, as little bits of the cake will mix up with it, and give the frosting a yellow appearance ; but on the next day make more frosting the samo as the first, and apply a sceond coat, and it will be white, clear and beautiful. And by dipping the knife into cold water as applying, you oan smooth the frosting very nieely. -
38. Excellent Crackers.-Butter 1 cup ; sait: teaspoon ; flour

Rub thoroughly together with the hand, and wet up with cold water; beat well, and beat in flour to make quite brittle and hard; then pinch off pieces and roll out each cracker by itself, if you wish them to resemble bakers' crackers.
39. Suaar Crackers.-Flour 4 liss. ; loaf sugar and butter, of each 1-2 lb. ; water 1 1-2 pts. Make as above.
40. Naplus Biscurr.-White sugàr, eggs, and flour, of each 1 lb .
If properly pulverized, sifted, beat, mixed, and baked the size of Boston orackers, you will say it is nioe indeed.
41. Beckwheit Short-Cake.-Take 3 or 4 tea-cups of nice sour ruilk, 1 teaspoon of soda-saleratus dissolved in the milk; if the nillk is very sour, you must use saleratus in propc ion, with a littic salt ; miz up a dough with buckwheat flour, thicker Han you would mix the same for griddle-cakes, say quite, stiff ; put bike buttered tin, and pat directly into the stove oven and mon $f$ sur.
It takes the plave of the griddie-cake, ale of the shortoake, in every sense of the Ford-nico vith weat, butter, honey, molasses, \&o. No shortening is use 1 and no need of seiting your dish of batter over night, ar a drunken

## DR. OHASE'S LECOPES.

hasband to set ils foot in. Wet tho top a little, and warm it up at next meal, if any is left--it is just as good as when first made, while griddle-cakes have to be thrown away. It is also very good, cold.

Were the beauty of this cake known to the majority of persons throughout the country generally, buckwheat would become as staplo an article of commeree as the common wheat. Do not fail to give it a trial. Some persons in trying it, have not had good luck the first time ; they have failed from the milk being too sour for the amount of saleratus used, or from makiug the dough too thin. I think I can say we have made it Lundreds of times with success, as I could cat it while dyspeptie, wher I could eat no other warm bread.
42. Teast Cake.-Good lively yeast 1 pt.; rye or wheat flour to form a thick loatter ; salt 1 teaspoon ; stir in and set to rise ; when risen, stir in Indlan meal, until it will roll out good to rise ;
When esain risen, roll out very this ; cut them into cakes and ary in the shade; if the weather is the lenst damp, by ile or stove. If dried in the sun, the least ferment.
To use: Nissolve one in a little warm water, and stir in a couple of tablo-spoons of flour ; set near the fire, and When light mix into the bread. If wade perfectly dry, BDIZ keep for six months. being made, Takekee Lhown breid.- Hor each good sized loaf it, to scald it properly : let stand and pour boiliug water upon put about 1 qt. of rye lour upon the meal blood warm, then bowl of emptyings,kwith a little saleratus meal, and pour in a good water, kneading in more flour, to saleratus dissolved in a gill of mon bread. If you raise it with yeake of the consistence of combut if you raise it with salt-rising yeast, put a little salt in the meal, no more salt is needed. Form into loaves, until light; in a cool pet them set an hour and a half, or or under the stove, in wiee, in summer, and on the hearth, Make the douch full winter; then bake about two hours. harder; for if made too soft it as for wheat bread, or a little style was to use only one-t it does not rise good. Let all persons bear in mind that bread should never be eaten the day on which it is baked, and positively must this be observed by dyspepties. Hotels never ought to be without this bread, nor families who care for health.
2. Grafam Bread.-I findin Zion's Heraku, vaston, edited by the Rev. E. Os Haven, formerly a Professor in the University at this city, a few remarks upon the "Different Kinds of Bread," including Graham, whish so fully explain the philosophy and true principles of bread making that I give them an insertion, for the benofit of hread makers. It says:
"Riee flour added to wheat flom, enables it to take ap an increased quantity of water." (See the "New French Method of Making Bread.") "Boiled and mashed potatoes mixed with the dough cause the bread to mutain moisture, and prevent it from drying and erumbling. Ryo makes a dark colored bread; but it is capable of halug fermented and raised in the samic manner as wheat. It retains its freshness and moisture longer than wheat. Au admixture of rye flour with that of wheat, decidedly impmoves the latter in this respect. Indian corn bread is much nsed in this country. Mized with wheat and rye, a dough is produond capable of fermentation, but pure maize meal cannot be fermented so as to form a light bread. Its gluten lacks the tenacious quality necessary to produce the regular cell-strue ture. It is most commonly used in the form of onkes, made to a certain degree light by eggs or sour milk, and ealeratus, and is gencrally eaten warm. Indian corn is gxound into meal of varions degrees of coarsoness, but is never made so fine as wheaten flour. Bread or cakes from maize rcruire a considerably longer time to be acted upon by heat in the baking process, than wheat or rye. If ground wheat be. unbolted, that is, if its bran be not separated, wheat meal or Graham flour resalts, from whieh Graham or dyspepsia bread is produced. It is made in the same general way as other wheaten bread, but requires a little peouliar management. Upon this point Mr. Graham remarks:
"'The wheat meal, and especially if it is ground cocarooly, awelis at irst be made quite dough, and therefore the dough should not When it in raised, if it is found too soft to mpald well, in intlo

IMAGE EVALUATION TEST TARGET (MT-3)

## R. CIIASE'S REOIPES.

more meal may be added. It should be remarked that dough made of wheat meal will take on the acetons fermentation, or become sour sooner, han that made of fine flour. It requires a hotter oven, and to be baked longer, but must not stand eo long after being mixed before baking, as that made from flour.
3. Brown Bread Biscuir.-Take corn meal 2 qts. ; rye flour 2 pts.; wheat flour, 1 pt.; molasses 1 table-spoon ; yeast 3 table-spoons ; having soda 1 teaspoon mixed with it.

Knead over night for breakfast. If persons will eat warm bread, this, or buckwheat short-cake, should be the only': kinds eaten.
4. Dreperpics' Biscuit and Commem.-Take Graham flour (wheat coarsely ground, withont bolting), 2 qts.; corn meal sifted, 1 qt.; butter 1-2 cup; molasses 1 cup; sour milk to wet it up with salecatus. as for biscuit.

Roll out and cut with a tea-cup, and bake ns other biscnit; and when cold they are just the thing for dyspeptics. And if the flour was sifted, none would refuse to eat them:

For the Corfee.-Continue the baking of the above biscuit in a slow oven for six or seren hours, or until they are browned through like coffec.
Drrecrions.--One biscuit boiled $\frac{3}{4}$ of an hour will be plenty for 2 or 3 cups of coffee, and 2 for six persuns; serve with cream and zugar as other coffee.

Dyspeptios should chew very fine and slowly, not drinking until the meal is over; then sip the coffee at their leisure, not more than one oup, however. This will be found very nice for common use, say with one eighth coffige added; hardly any would distinguish the difference between it and that made from coffeo alonc. The plan of buying ground coffee is bad; much of it is undoubtedly mixed with peas, which you can raise for less than fifteen or twenty oents a pound, and mix for yourself.
5. London Bakers' Superior Loaf Breàd.-The Michigan Farmer gives us the following; any one can see that it contains sound sense:
"To make a halfpeck loaf, take 1 lb . of well boiled mealy potatoes; mnsh them through a fine cullender or coarse sieve ; add $\frac{1}{2}$ part of yeast, or 4 oz. of German dricd-yeast, and 14 pts. of
 render the mixture the consistence of thin batter; this mixtare is to be sei aside to ferment ; If set in a warm place it will rise
in less than 2 hours, when it in less than 2 bours, when it resembless seant, oxcept in color.

## 

The eponge so made is then to be mired with 1 pt. of water, noarly blood warm, viz, 92 deg. Fahr, and poured into half peck of flour, which has previously had 14 ozs. of salt mixed into $1 t$; the whole should then be kneaded into dougE, and allowed to rise in a warm place for 2 hours, when it should be kneaded into loaves and

The object of adding the mashed potatoes is to increase the amount of fermentation in the sponge, which it does to a very remarkable degree, and consequently, renders the bread lighter and better. The potatoes will also keep the bread moist.
6. Old Bachelors' Bread, Biscutr, or Pie-Crost.-Flour 1 qt. ; cream of tartar 2 teaspoons ; soda $\frac{8}{4}$ teaspoon ; sweet mill to wet up the flour to the consistence of biscrit dough.

Rub the flour and cream of tartar well together; dissolve the soda in the milk, wetting up the flour with it and bake immediately. If you have no milk, use water in its place, adding a spoon of lard to obtain the same riohness. It does well for pie-crust where you cannot keep ap soar milk.
7. New Frenci Method of Marava Bread.-Take rice 4 lb .; ue it upin a thick linen bag, giving ample room for it to swell; this while warm with 7 lbs of until it becomes a perfeut paste $;$ mix yeast and salt ; allow the dough to ading the usual quantities of fire, then divide into loaves ously.

This quantity of flour and rice makes about thirteen and one-half lbs. of bread, whioh will keep moist much longer than without the rioe. It was tested at the London Polytechnio Institute, after having been made publio in France, with the above results.
8. Baking Fowders, for Biscutr Withoot Shortienavg.-Bicarbonate of soda 4 ozs.; cream of tartar 8 ozs. ; and properly dry bottles to prevent dy mix. It should be kept in well corked

Use about three thess which neitralizes the acid. beked; mix with teaspoons to eaoh quart of flour being cold water and put lir, if you have it, if not, wet up with PITS PIEWn sugar 1 cup; flour 2 table table-fpoons.

Graie the rind from the 1 and chop up the balanoe
add the water, brown sugar, and flour, working the mass into a smooth paste; beat the eggs and mix with the paste, savitg the whites of two of them;-make two pies, baking with no top crust ; while these are baking, beat the whites of the two cggs, saved for that purpose, to a stiff froth, and stir in the white sugar; when the pies are done, spread this frosting evenly over them, and set again in the oven and jrown slighly.
2. Pie-Crust Glaze.- In making any pie which has a juicy mixture, the juice soaks into the crust, making it soggy and unfit to eat; to prevent this:
Beat an egry well ; and with a brush or bit of cloth, wet the orust of the pie with the beaten egg, just before, you put in the
pie mixture.

For pies which have a top crust also, wet the top with the same before baking, which gives it a beautiful yellow brown. It gives beauty also to biscuit, ginger cakes, and is just the thing for rusk, by putting in a little sugar.
3. Apple Pie whior is Diaestible.-Instead of mixing up your eriust with water and lard, or butter, making it very rich, with shortening, as customary for apple pies:
Mix it up every way just as you would for biscuit, using sour milk and saleratus, with a little lard or butter only; mix the dough quite stiff, roll out. rather thin, lay it upon your tin, or plate ; and having ripe apples sliced or chopped nicely and laid on, rather thick, and sugar according to the acidity of the apples, then a top crust, and bake well, putting the egg upon the crasts, as mentioned in the "Pie Crust Glaze," and you have got a ple that is it to eat.

But when you make the rich crust, and cook the apples and put them on, it soakes the orust which does not bake, and no stomach oan digest it, whilst our way gives you a nice. light crust, and does not take half the shortening of the other plan; yet perhaps nothing is saved pecuniarily, as butter goes as finely with the biseuit-crust pies, when hot, as it does with biscuit; but the pie is digestible, and whon it is cold, does not taste bad to out it up on your plate, with plenty of sweetened cream.
 sour apples and stew until soft and not much water left in them; then rub them through a cullender; beat three eggs for each pio to bo baked, and put in at the rate of one cup of butter and on of engar for three pien ; acopgon with nutmen:
king tre mass with the paste, vo pies, baking reat the whites stiff froth, and ne, spread this the oven and
ie which has a ust, naking it

If cloth, wet the you put in the
the top with autiful yellow er cakes, and le sugar.
nstead of mixter, making it pple pies:
uit, using sour only; mix the on your tin, or nicely and laid - of the apples, pon the crasts, have got a ple
ok the apples oes not bake, gives you a shortening of pecuniarily, ies, when hot, le, and whon 1 your plate,

تiATEN:- Feel left in them zs for each pia ter and ono of.

My Fife has more
pie, with only half of a sup of butter and sugar each, to 4 or 5 pies ; but the amount of sugar must be governed somewhat by the acidity of the apples.
Bake as pumpkin pies, which they resemble in appearance; and between them and apple pies in taste, very nice indeed. We find them equally nice with dried apples by making them a little more juicy.

If a frosting was put upon them, as in the "Lemon Pio," then returned, for a few minutes, to the oven, the appear. ance, at least, would be improved.
5. Apple Costard, Very Nice.-Take tart apples, that are quite juicy, and stew and rub them, as in the recipe.above ; and to 1 pt . of the apple, beat 4 eggs and put in, with 1 table-spoon of sugar, 1 of hutter, and $\frac{1}{2}$ of a grated nutmeg.

Bake as other oustards. It is excellent; and makes a. good substitute for butter, applo butter, \&e
6. Pastre for Tarts:-Loaf sugar, flour, and butter, equal forghts of each ; mix thoroughly, by beating with a rolling pin, for half an hour ; folding up and beating again and again.

When properly mixed, pinch off small pieces and roll out each orust by itself, whioh causes them to dish so as to hold the tart-mixture. And if "d will have a short pie-crust, this is the plan to make it' '
puddings-Biscuit Pudding; Without Re-Bakeng. - Take Trater 1 qt. ; sagar $\ddagger$ lb. ; butter the size of a hen's egg, lour 4 table-spoons ; nutmeg, grated, 1-2 of one.
Mix the flour with just sufficient cold water to rub up all the lumps while the balance of the water is heating, mix all, and split the biscuit once or twice, and put into this gravy while it is hot, and keep until used at table. It uses up cold biscuit, and I prefer it to richer paddings. It is indeod worth a trial. . This makes a nice dip-gravy also for other puddings.
2. Old Enalish Christmas Plum Pudding.-The Harrisburg Telegraph furnishes its readers with a recipe for the real "Old Enclish Cinistimas Flum Pudding." After having given this pudding a fair test, I am willing to endorse every word of it; and wish for the holiday to come eftener than once a year:

Ily washed, 1 ib . them ; add $1-4 \mathrm{lk}$ sugar; 11-2 ozs. a small nutmeg, 1 en ; work it welt ag room to swell : tivo hours. It
be dipped "into and when the ready, and dip of the pot, which cloth. For a the "Biscuit ding Sauce for
lk 1 qt. ; butter ; raisins 1-2 lb. ; $t$ boiling ; then 11 well together, en with sweetmentioned in
with a little salt ; aisins 1 lb .
in cool stir in ${ }^{3}$ milk and stir lied currants, " purpose, and s. Boil about $l$ cream or any riled mu. t not en out as soon t. ur milk; 2 rgge, red in the railk; istence of corn ationed above;
$n$ with a little $t$ eaten of this orthy.

## BANERS' AND COOKING DEPARTMENT.

 plenty of dried apples or peaches, and not much of the smaller fruits; or desire to change from them in puddings. Tako wheat flour sufficient to make a good pan of biscult, and mix it up as for biscult, with sour milk, saleratus, and a little butter or lard, roll out rather thicker than for pie crust; now, with tho "Pio Crust ar peaches nicely stewed, wet the crust over it, adding a little sugar,, as it lies upon the table the fridit upon choose, soatter over them a handful upon the table; and if you the dried fruits mentioned ; roll up of raisins, or any other of 1 hour.Eaten with any sance which you may prefer. But the corn meal puddings are much the most healthy, and I profer their taste to those made from flour.
7. Potito Puddiva.-Rub through a callender 6 large or 12 middle-sized potatoes; beat 4 eggs, mix with 1 pt. of good miik; stir in the potatoess, sugar and seasoning to taste ; butte: the dish;
bake half an hour.

This recipe is simple and economical, as it is made of what is wasted in many families, namely, cold potatoes; which may be kept two or three days, until a sufficient quantity is collected. To be eaten with butter.
8. Green Corn Pudding.-Green corn, raw, 2 doz ears ; sweet milk 3 to 4 qts.; 6 eggs ; sugar 1 to 2 cups. Salt to suite the taste. Split the kernels lengthwise of the ear with a sharp knife; then with a case knife scrape the corn from the cob, which leaves the hulls on the cob; mir it with the milk and other artioles, and bake from two to three hours. To be eaten with butter and sugar.
9. Stranced Puddnge.-Two eggs ; sugar 1 cap ; sour milk 1 cap; saleratus $1-2$ teaspoon; a little salt; aried whortleberries, car: cants, raisins, or other fruit, 1 cup ; flour.
Beat the eggs and stir in the sugar; dissolve the saluratus in the milk, and mix in also the fruit and salt; then thicken with flour rather thicker than for cake; putinto a two-quart pan and $s t$ in the steamer, and steam an hour and a half; and I think it will crack open on the back-if not, try again. It is morth the trouble, especially if you have plenty of spreetened cream.

[^10]

## DR. OHASE'S RECLPES.

Grato the nutmeg and rub all together ; these are about tho proper proportions, but more or less can be made, as desired, and more or less nutmeg can also be used; or any othes flavoring in their place. This sauce is nice on baked puddings, hot or cold; and to tell it all, it is not bad on bread. See the "Bisouit Pudding," for dip-sauces. domestic dishes-Green Corn Omelet.-Green corn bollod 1 doz. ears; 5 eggs; salt and pepper to suit the taste.
Remove the corn from the oob, as mentioned in the "Green Corn Pudding." The splitting allows the esoape of the pulp, whilst the hull is held by the cob; season, form into small cakes and fry to a nice brown, and you have a vory nice omelet.

## 2. APPLES-To

serves,-Take moderately pockel-knife cut out the sour appies, when ripe; and with a moove the skin from these cup-shimer end also, so as to roplace them in a dripping-pan ; sugar, and pretty freely between thill these cavities with brown on a few lumps of butter over them also, with sugar; then lay ranged, into the oven when you begingar; place them thus artreakfast cr dinner, and keep them in until heat up the stove for und soft.
Take them up on plates, while hot, by means of a spoon, and dip tho gravy, arising from the apple juice, sugar and butter, over them. Should any of them be left after the meal is over, set them by until the next meal, when they may be placed in the stove oven until hot, and they will have all the beauty of the first baking. Or perhaps some persons may prefer them fried, as follows:
3. Fried Appies-Extra Nice.-Take any nice sour cooking apples, and after wiping them, cut into slices about one-fourth of an inch thick; have a frying-pan ready, in which there is a must be bot of lard, say $\frac{1}{2}$ or $\frac{4}{4}$ of an inch in depth. The lard of them fry until bre slices of apples are put in. Let one aide sugar on the browned side of turn, and put a small quantity of side is browned, the sugar will be met By the time the other whole surface.

Serve them up hot, and you will have a dish good enough for kings and queens, or any poor man's breakfast; and I think that even the President would not refuse a fer vilioes, if properly cooked. There is but little choice be

washed the white olothes, whilst hanging them out, dipping in somo of the boiling water from the boiler, if nccessary; then wash out the woolen and calion as usuaj-of course, washing out woolen goods before you do the calico. The fluid brightens instead of fading the colors in calioo. give their clothes before boiling, and more than half of the soap-does not injure the olothes, but saves their wear in two rubbings before boiling; and is a good article for romoving greaso from floors, doors, and windows, and to remove tar or grease from the hands, \&o.
I hope every lady into whose hands this recipe may fall, will give it a trial, as my family have now used it over seven years, not missing only two washings. Ii does not rot clothes, but makes them wash full or more than one-half easier than the old way. Seven years ought to be considered a auffioient test.

The honor of this recipe is accredited to Prof. Lielig, of Germany.

I have found many women using turpeutine, alvohol, ammonia, camphor gum, \&o., in their washing fluids; but none of them ought ever to be used for such purposes (une woman lost the use of her arm, for six months, by using a fluid oontaining turpentine) ; the turpentine and aloohol, especially, tend to open the pores of the skin, and thus make the person more liable to take cold in hanging out the clothes, as also to weaken the arm.

And hear let me say, if it is possible to aboid it, never allow the woman who washes the clothes, and this becomes warm and sweaty, to hang them out; and especially ought this to be regarded in the winter or windy weather. Many consumptions are undoubtedly brought on by these frequently repeated colds, in this way. It works upo a the prineiple that two thin shoes make one cold, two colds an attack of bronohitis; two attacks of bronohitis one onusumption-the end, a ooffin. blueing sold is poor stuff, leaving speoks in the clothes. The avoid this:
Take best Prussian-blue, pulverized, $1 \mathbf{o z}$; ozalio scid; also

an bo got, is the best, and onky nce, with three oents for the acid, will satisfaction than efty cents worth of the common This amount has now lasted my family over a

OAPS-Soft Soar-For Half tee Expense axd One-Fochtr a Trouble op tie Old Way.-Take white-bar soap 4 lbs ; cat h fine and dissolve, by heating in soft water 4 gals. ; adding saleoda 1 lb . When all is dissolved and well mixed, it is doue.
Yellow soap does very well, but Colgate's white, is said to be the best. But our "White hard soap" is the same lind.

This soap ean be made thicker or more thin, by using more or less water, as you may think best after once making it. Even in common soft soap, if this amount of sal-soda is put into that number of gallons, washing will be dune much easier, and the soap will more thay compensate lix the expense and trouble of the addition.
2. German Erasive, or Yellow Soap.-Tallow and sal soda of
 soft water 28 gals.; or for small quuntities, tallow ${ }^{8}$ nd salsoda, of each 1 lb . ; rosin 7 ozs ; stone lime 4 ozs ; palm.oil 1 oz . ; solt water 1 qt .

Put soda, lime, and water into a kettle and boil, stirring well; then let it settio and pour off the ley. In another kettle, melt the tallow, rosin, and palm-oil; having it hot, the jey being also boiling lot; mix all together stirring well, and the work is done.
3. $\mathrm{H}_{\text {ARd }}$ S Jap, with Lard.-Sal-sode and lard, of each 6 lbs. stone lime 3 lbs. ; soft water 4 gals. - dissolve the lime and soda in the water, by bolling, stirring, settling and pouring off; then return to the kettle (brass or copper) and add the lard and boil u* til it becomes soap; then pur into a dish or moulds, an ${ }^{2}$ sold, cut it into bars and let it dry.
This revipe was ristained by finding an over-co in the pooket, an. also a piece of the $s$ ap; the with him, as it irritated his salt-rheum so
ps. It has proved valuable for ${ }^{-1}$ half the toilet soaps sold, if an ounce or two of sassafras oll was stirred into this amount; or a little of the soap might be pat in a separate dish, putting in a little of the oil, to correspond with the quantity of soap.
4. White Hard Soap, witi Tailow.-Fresh slacked lime, salsoda, and tallow, of each 2 lbs. ; diseolve the soda in 1 gal. boilling soft water ; now mix in the lime, stirring occasionally for a few hours ; after which let it settle, pouring off the clear liquor and boiling the tallow therein until it is all dissolved ; $r$ ' it in a flat box or pan, and cut into bars or cakes, as preferrei.

It can be flavored with sassafras oil, as the last, by stirring it in when cool; it can be colored also, if desired, as mentioned in the "Variegated Toilet Soap."

When any form of soda is used in making soap, it is neoessary to use lime to give it causticity; or, in other words, to make it caustic; which gives it much greater power upon the grease, by removing the carbonio acid; henoe the benefit of putting lime in the bottom of a leach when making soap from common ashes.
5. Trangparent Soap.-Take nice yellow bar soap, 6 lbs. ; cot it thin, and put into a brass, tin or copper kettle ; with alcohol 1-2 gal. $;$ heating gradually over a slow fire, stirring until all is digcolved ; then add an ounce of sassafras essence, and stir until well mixed; now pour into pans about 1 1-2 inches deep, and when cold, cut into square bars, the length or width of the pan as deuired.

This gives you a nice toilet soap for a trifliz ; expense, and when fully dry it is very transparent.
6. One Hundred Pounds of Good Soap for \$1.30.-Take pitash 6 lbs., 74 cts. ; lard 4 lbs., 50 cts. ; rosin $\frac{1 \mathrm{lb} ., 5 \mathrm{cts} .}{}$

Beat up the rosin, mix all together, and set aside for five days; then put the whole into a ten gallon cask of warm water, and stir twice a day for ten days; at the expiration of which time you will have one hundred pounds of excellent soap.
7. Chemioal Soft Soap.-J. Hamiltor, an Engliah gentieman, and proprietor of the Eagle Hotol, Aurora, In. diana, makes his soap for house use, as follows:
Take grease 8 lbs . ; caustio soda 8 lbs ; sal-soda 1 lb , ; melt the grease in a kettle, melt the sodas in soft water 4 gals. and pour
all into a barrel holding 40 gals., and fill up with soft water, and the labor is done.

Wheu 刻e caustio soda cannot be obtained of soap-makers, you will make it by obtaining soda-ash and fresh slacked lime, of each eight pounds; dissolving them in the water with the sal-soda, and when settled; pouring off the olear liquid as in the "White Hard Soap with Tallow."
8. Soap without Heat.-Mr. Tomilson, writing to Judge Buel, says:
"My wife has no troible about soap. The grease is put into a cask, and strong ley added. During the year, as the fat ir ir reases, more ley is stirred in ; and occasionally stirred with a stick that is kept in it. By the time the cask is full, the soap is made for use."

There is no mistake about this manner of making soap: weak ley and hasten the process.
9. Windsor, or Torler Soap.-Cut some new, white bar soap into thin slices, melt lt over a slow Ire, and scent it with oil of caraway ; when perfectly dissolved, pour it into a mould and let it remain a week, then cut it into such sized squares as you may require.
10. Vabiegated Tollet Soap.-Soft water 3 qts. ; nice white bar soap 3 lbs. ; sal-soda 2 ozs. ; Chinese vermillion and Chinese blue, of each, as much as will lie on a 5 -cent piece ; oil of sassafras 1 oz .

Shave the soap fine and put it into the water as it bogins to boil ; when dissolved, set it from the fire; take out a oup of the soap and stir in the vermillion ; take out another cup of the soap and stir in the blue; then pour in one of the cops and give two or three turns only with the stirring stick; then put in the other in the same way; and finally pour into a suitable box, and when cold it can be cut into bars; or it can be run in moulds, if desired; it will become hard in a short time; giving most excellent satisfaction. If-stirred thoroughly, after putting in the colors, it would be all of a mixed color; butgiving it only two or three turns, leaves it in streaks, more beautiful.

Soan manufacturers generally use soda in preferones to wood ashes, because less troublesomo; and to make it more caustic, or, in other words, to absorb the carbonio acid gas,
lime with soda-ash, or sal-soda; dissolving by heat or stirring; or by both; using sufficient water to make the ley support a fresh laid egg, and drawing off clear of the lime sediment. Thirteen hundred pounds of the tallow, or thereabouts, with the ley, makes one ton of white soap; and yellow soap, by using ten hundred of tallow and three hundred and fifty of yellow rosin, for each ton, boiling with the ley until they unite; then pouring into frames, made to fit one upon another, to cool and harden; finally taking off one frame at a time, and with a wire, having a handle at each end to draw it with, out into slices, then bats, and cording up, as wood, to dry. If wood-ashes are used, plenty of lime must be put into the bottom of the leach.

TALLOW CANDLES-For Summer Use.-Most tallow, in summer, is more or less cofi, and often quite yel-low,-to avoid both:

Take your tallow and put a little vees-wax with it, especially if your bees-wax is dark and not fit to sell; put into a suitable Kettle, adding weak ley and gently boil, an hour or two eaoh day for 2 days, stirring and skimming well ; each morning ontting it out and scraping of the bottem which is soft, adding fresh ley (be sure it is not too strong) 1 or 2 , or 3 gals., according to the amount of tallow. The third morning use water in which alum and saltpetre are dissolved, at the rate of 1 lb each, for 30 lbs . of tallow; then simmer, stir, and skim again ; let cool, and you can take it off the water for use.

They may bo dipped or run in moulds ; for dipping, allow two pounds for each dozen candles.

Saltpetre and alum are said to harden lard for candles; bnt it can be placed amongst the humbugs of the day. But I will give you a plan which is a little shorter for hardening tallow; either will work well, take your ohoice:
2. Tallow-To Cleansa and Bleacie-Dissolve alum 5 lbs., in water 10 gals., by boiling; and when it is all dissolved, add tallow $20 \mathrm{lbs} . ;$ continue the boilling for an hour, constantly stirring and skimming ; when sufficiently cool to allow It, strain through thick muslia ; then set aside to harden; when taken from the water, lay it by for a short time to drip.

Dip or mould, as you please, not expeoting them to "run" in summer nor "eraok" in winter. They wil! aleo bum very brilliantly, at which, however, you will not be surprised when you consides the amount of filth thrown off in cleansing.

Fence POSTS-To Prevent Rotting.-A correspondent of the American Agriculturist says:
"I think it would be well to call the attention of farmers to the ase of coal-tar as a paint. The tar produced in coal gas works is extensively used in England for painting fences, outbuildings, \&o. ; and is being introduced in this country, also. It never alters by oxposure to the weather; and one or two good coats will last for many years. It is the cheapest and best black paint that can bis used. Our buildings ara painted with it ; all our apparatus also ; and even the wrought-iron pipe we place in the ground is coated with it. I think if its advantages were fully known, it would be generally used throughout the United States. The Government soak the brick used in building the fort at Throgg's Neck in this tar, which renders them impervious to water ; and posts painted with it are protected from rot ; when in the ground, as effectually as if they had been charred."

I know this tar is muoh more effectual than charring, and is not one-tenth the trouble. There are posts near this city, which have now been set over ten years, and yet no appearance of decay. The coating is still perfect also.

The only objection to it as a paint above ground, is its offensive smell, from the heat of the sun.

- No persons should allow themselves to set a single post without its application, and farmers who are putting out much fence, cannot possibly be so short sighted as to neglect it after it comes to their notice,
It is donbly important to railroad companies from the fact that these roads run through the most level portions of country, and consequently the most swampy and wet, therefore fence posts are the most liable to ro, The mode of application is as follows:
Have a large iron kettle so arranged that you can make and keep the tar hot, then, after having removed the bark, if any, set the end of the post into the tar ; and if the tar is not sufficiently. deep to take the post into it as far as you wish to tar it, have a swab of cloth tlec upon a broom-handte or other stirk, and swab it up at least 6 to 10 inches above the ground line, when the post is set ; then lift up the post, letting it drip a moment, and lay it away upon rails or poles placed for that purpose, not allowing them to touch each other until dry.

Two men will tar about five hundred posts in one day, and one barrel of tar wil! be sufficient for that number. Who then will hesitate to adopt its use? especially when the tar.can be purehased at the gas works for about two dolhu's per barres.
tuc.
for 24 hours to draw off the blood.
up letting it drain, and pack as desired. Thind, hare ready a pickle prepared ns follows:--for cvery 100 lbs . of beef use 7 lbs . of salt ; ; saltpetro and cayenue pepper, of cach 1 oz ; molasses 1 qt., and soft water 8 gals. ; boil and skim well, and when cold pour it over the beef.

This amount will cover one hundred pounde, if it has been properly packed. I have found persons who use nothing but salt with water, and putting on hot, soalding again at the end of three weeks, and putting on hot again. The only object claimed for putting the brine on the meat while hot, is, that it hardens the surface, wher.4 retains the juices, instead of drawing them off.
2. The Miohioan Farmers'. Meitod.-Is. cor each 100 lbs of beef, ase salt 5 lbs . j saltpetre $\frac{1}{4} \mathrm{Oz}$. ; browia sugar 1 lb .; dissolve in sufficient water to cover the meat-two weeks after take up. drain-throw away the brine, make more the same a3 first, it will keep the season through-when to be boiled for eating, put into boiling water-for sonps into cold wetter."

I claim a preference for the first plan, of drawing off the blood before pickling, as saving labor; and that the cayenne and saltpetre improves the flavor and helps preserve;", and that koiling and skimming cleanse the brine very much. Of late years I pursue the following:
3. Bega-To Pioglam for Winter or Presr. Obe, and for Drying.-Cat your beef into sizeable pieces, sprinkle a little sals upon the bottom of the barrel only, then pack your beef without salt amnngst it, and when packed pour over it a brine made by dissolving 6 lbs . of salt for each 100 lbs . of beef in just suffcient coil. water to handsomely cover it.

You will find that you can cut and fry as nice as fresh, ". ? ong time; just right for boiling also; and when it gets : 'Ittle too salt for frying, you can freshen it nearly as weely as pork, for fiying purposes; or you can boil of it, then make a stew for breakfast, very nice indeed. By the other plan it soon beoomes too salt for eating, and the juices are drawn off by the salt. In three weeks, perhaps a little less, such pieces ns are designed for drying will be ready to hang up, by soaking over night to remove the salt from the outside. Do not be afraid of this way, for it is very nice for winter and drying purposes; but if any is left ant/t

Warm weather, throw away this brine, put sall annongst what is left and cover with the first brine, and all ist right for long keoping.
4. Mutron Hams-To Piokle for Drying.- First take weak brine and pnt the hams into it , for 2 days, then pour off and apply the following, and let it remain on from 2 to 3 weeks, according to the size : For each 100 lbs , take salt 6 lbs.; saltpetre 1 oz. ; saleratus 2 oz ; molasses 1 pt ; ; water 6 gals., will cover these
if closely packed.

The saleratus keeps the mutton from becoming too hard.
5. Curing, Smoking, and Kreping Hams.-Rose Cottaar, Munoie, Ind., Nov. 26th, 1859 : I noticed an article in the Gazette of yesterday, headed as above, from the pen of Mr. Alezander Brooks, taken from the Rural New Yorker, and as I have some useful experience in that line, I desire to suggest my plan for ouring and keeping:
To a cask of hams, say from 25 to 30 , after having packed them closely and sprinkled them slightly with salt, I let them lie thus for 3 days; then make a brine sumficient to cover them, by putting salt into clear water, making it strong enough to bear up a sound egg or potato. I then add +1 lb . of saltpetre, and a gallon of molasses; ; let them lie in the brine for 6 weeks-they are then ezactly right. I then take them up and let them drain; then while damp, rub the feek side and the end of the leg with inely pulverized black, red, or cayenne pepper; let it be as fine as dust, and dust every part of the flesh side, then hang them up and smoke. You may leave them hanging in the smoke-honse or other cool place where the rats cannot reacn them, as they are perfectly safe froma all insects; and will be a dish oft for a prince, or an American citizen, which is better.

> Reapeotfully yours.

Thos. J. Sluple.
I find that Mr. Sample uses twice as much saltpetre and double the time, for my eating, but perhaps not for general market.

If grocers will take this plan for preparing their hams and shoulders, there will be no need for sacking; and such as they bay in during the summer should receive a coat of pepper immediately, to prevent annoyance from flies.
6. T. T. Hamilyon's Maryland Method.-The hams of Maryland and Virginia have loag anjojed a wide celebrity. At one of the exhibitions of the Maryland State Agricultural Society, four premiums were awarded for
hams. The one whioh took the first premium was oured by Mr. T. E. Hamilton, from the following recipe:
"To every 100 lbs. take beet coarse salt 8 lbs ; saltpetre 2 on; brown sugar 2 lbs. ; potash $1+\mathrm{ozs}$; and water 4 gals. Mix the above, and pour the brine over the meal, after it has lain in the tub for some two days. Let the hams remain 6 weoks in the brine and then dry several days before smoking. I have gencrally had the meat rubbed with fine salt, when it is paoked down,"

The meat should be perfeetly cool before packing. The potash keeps it from drying up and becoming hard.
7. Pork.-To Have Fresh from Winter Kuinna, for Stincar Frinve.- Take pork when killed in the early part of the winter and let it lie in pickle aboat a week or 10 days; or until jasi unfficiently salted to be palatable ; then slico it up and fry it about half or two-tbirds as much as you would for present eating ; now lay it away in its own grease, in jars properly covered, in a cool place, as you would lard.

When desired, in spring or summer, to have fresh pork, take out what you wish and re-fry suitable for eating, and you have it as nice as can be imagined. Try a jar of it, and know that some things can be done as well as others. It is equally applicable to hams and shoulders, and I have no doubt it will work as well npon beef, using lard sufficient to cover it. So well satisfied am 1 of it that I have put in beefsteak this spring, with my fresh ham in frying for summer use. It works upon the principlo of canning fruits to ezolude the air. I put in no bone.

8: Salt Pork, for Frying-Nearly Equal to Fresb - For the benefit of those who are obliged to use considerable salt pork, the following method much improves it for frying:
Cut as many slices as may be needed; 'if for breakfast, the night previous, and soak till morning in a quart or two of milk, and water, about one-half milk, skimmed-milk, sour milk, oi buttermilk;-rines till the water is clear and then fry. It is neal or quite as nice as fresh pork,-both the fat and lean parts.

Occasionally I like to have this rolled in corn meal beforv frying, as it makes such a nice imitation of fresh fish.
9. Frese Meat-To Kebp a Weex or Two in Sonmerh-Farmers or others, living at a distance from butohers, oan koep freah meat very nicely, for a week or two, by puting it into sour millk. or buttermilk placing it in a cool oellar. The bone or fat need nof be removed.

Rinse well when used.

## DR. OEASE'S REODPRS.

## 10. Brokeng Meat-To Presiarye for Yeare, or Tor

 Bea Voyagrs.-How often are we disappointed in our hopen of having sweet hams during the summer ? After onrofully curing and smoking, and sowing them up.in bags, and whitowashing them; we often find that either the fly has oommenced a family in our hams, or that the choice parts around the bone are tainted and the whole spoiled.Now this can be easily avoided, by packing them in pulverizod oharcoal. No matter how hot the weather, nor how thick the lies; hams will koep, as sweet as when packed, for years." Tho preservative quality of charcoal will keep them till charcoal de. cays; or sufficientily long to have accompanied Cook three timea around the world.
11. Thie Rural New Yorker's Metiod.-It says: "In the Spring, cut the smoked hams in slices, fry till partly dono, pank in a atone jar alternate layers of ham and grary. If the ham should be very lean, use lard for grave. Be sure and fry the ham in the lard, so that it will be well seasoned. When wanted for use, take up, finish frying, and it is ready for the table."

The only trouble is, that we can't keep it half long enough, it is so good and handy.
12. The New England Farmer's "Saving His Badon."-About a couple of years ago, we were entertained at the house of a friend, with a dinner of eggs and bacon. We complimented our host on the superior quality of his bacon; and were curious to inquire the way to liko one that is better fitted for th. Alate of an epioure than for the stomach of a dyspeptic. Ho our surprise we wern informed that that portion of our meal was cooked eight months before.
Upon asking for an explat $\& i \mathrm{ic}$, he stated that it was his practice to slice and fry his bacor : inmediately on its belng cured, and then pack it in its own fa'. When occasion came for using it, the slices, slightly re-fried hive all the freshness and flavor of new bacon just prepared. 1 ,y this precaution, our friend always succeeded in "saving hie tacon," fresh and sweet, through the hoitest of weather.-Nero thagland Farmer.
I have no doubt but kat it will do as well to paok meats if fried in this way, is iubs or barrels as in jars, but I rather prefer covered mity putting a couple of thioknessees of cloth over the jar bedore puttiuc on the cover"; placed in a cool cellar.

## I also find it necessary to put in lard oceasionally as you

 aro frying, as there is not generally enough brought out by tho frying to fill the crevices betwoen the slices, which must be filled.Canning fruits-Peacies and Pears,-After paring and coring, pat amongst them sufficient sugar to make them palatable for present eating-about 3 to 4 lbs. only for each bushel ; let them stand awhile to dinsolve the sugar, not using any water; then heat to a boil, and continue the boiling, with care, from 20 to 30 minutes ; or sufficiently long to heat through, which expels the

Have ready a kettle of hot water, thto which dip the can long energh to heat it; then fill in the fruit while hot, corking it immediately, and dip the end of the cork into the "Cement for Canning Fruits." When cold it is best to dip the second time to make sure that no air holes are left which would spoil the fruit. All sanned fruits are to bo kept in a very cool cellar.

We have, yesterday and to-d, , been eating peaches put up in this way, two years ago, which were very niso indeed. Seo "Peaches, To Pcel."
2. Berries, Ploms, Cueries, do.-Raspberries, blackberries, wnortleberries, currants, cberries, and plums, need not be boiled over 10 or 15 minutes ; using sugar to make palatable, in all cases; truit. must be put in some time, and it helps to preserve the
They require the same care in heating cans, \&c., as above, for peaches.
3. Strawberkies.-For strawberries, put sugar $\frac{1}{2}$ lb. for each lb. of berries ; and proceed as for berries above.

Strawberries are so juicy, and have suoh a tendeney to fermentation, that it is almost impossible to keep them. I havo found it ibsolutely so, until I adopted the plan of using the amount of sugar above named: if others can do with less, they can benefit the publio by telling me how they do it.
6. Tomuross,-For tomatoes, scald and peel them as for other cooking ; then scald, or rather: boil for about 15 minutes only, and can $\mathrm{ds}_{\mathrm{s}}$ above.

Or what I think best, is to use a little salt, and put them into half-gallon jugs'; for we want them in tod great cuantities to stop on a fow glass jars, such as we uise fi her
fruits; as for tin cans, I never use them; if you do use tin cans for tomatoes it will not do to use salt with them, as it has a tendenoy to oanse rust.
6. Cancent yon Canniza Fruits.-Rosin 1 1-lb. ; lard, tallow and beeswax, of each 1 oz.
Mealt and stir together; and have it hot, ready to dip into when canning.
7. Rubal Naw Yorkir's Method.-The editor says:

From four years' experience with not only strawberries, bat peaches, cherries, raspberries, pine-apples, \&o., without losing a single jar, the flavor being also perfect: Using only selfesealing class jars. Put into a porcelain preserving kettle, enough to fill heat quart jars ; sprinkle on sugar +lb . ; place over a slow fre and heat through, not cooked. While the fruit is heating, keep the jlately. with hot water. Fill ap to the brim, and meal imme-
As it cools, a vacuum is formed whioh prevents bursting. In this way every kind of fruit will retain its flavor: Sometimes a thiok leathory, mould forms on the top-if so, all the better.
CATCHUP - Tomato Catchop.-Take perfectly ripe tomatoes it bushel ; wash them clean and break to pleces; then put over the, fire and let them come to a boil, and samove from the Are; when they are sufficiently cool to allow your hands in them, rub throngh a wire sieve ; and to whit goes throug 4 , add salt 2 tea-cups ; allspice and cloves, of each, ground, 1 toa-cup ; best Finthgar qua Put on to the fire again and cook 1 hour, stirring thick whin used, put in a little vinegarl and seal for use. If too they may need boiling over an hour.

This recipe is from Mrs. Hardy, of the American Hotel, Dresden, 0 ., and is decidedly the best catchup which I have over tasted; the only fault I have ever heard attributod to It was, "I wish we had made more of it." "We have not got half enough of it," \&o. But there are those who oannot use tomatoes in any shaps; such persons will undoabtedly like the following:
Currant Catciupr.-Nice fally ripe currants 4 lbs. $;$ sagar 13 libs. ; cinnamon, ground, 1 tablespoc_; salt, with ground oloves and pepper, of each 1 teaspoon ; vinegar 1 pt.

Stew the currants and angar until quite thiok; then add the other ingredients, and bottle for use.
you do use with them, as rd, tallow and ly to dip into editor says : awberries, bat hout losing a Iy solf-sealing enough to fill slow fire and ing, keep the ad seal imme-
tts bursting. vor: Some-p-if so, all
ripe tomaes ; then pat ove from the inds in them, M, add salt 2 a-cup ; best 10ur, stirring use. If too a very juicy
ican Hotel, ich I have tributed to
e have not 9 who can. undoubt-
; sugar 11
und oloves

PRESERVFS-Tomato Presintres.-As some peryons will have proserves, I give them the plan of making the mont healthy of any in use:
Take ripe, noalded and peeled tomatoes, 13 lbs ; nlce, scalding lot molameen 1 gal.; pour the molasses npon them and let stand 12 hoarn; then boli until they are properly cooked; now shim oat the tomatoen, but continue boiling the syrup until quite thick; then pour again upon the tomatoes, and put away as other proserves. A table-tpoon of ginger tied up in a bit of Noth, and bolled in them, gives a nice flavor; or the extracts can be ased ; or lemon peel, as preforred-if sugar is used, pound for pound is the amount.
But I profer to put thom, or any othor fruit, into jugs, cans, or bottlos, whioh retain the natural flavor and does not injure the stomach, whioh all preserves do, to a greater or legs extent. Yot I give you another, beoause it does so niooly in place of citron, in cakes.
2. Pregervisd Watmi-Melon in Plage of Citron for Oares.The harder part of water-melcn ; next the skin made into pre serves, with augar, equal weights; cooking down the syrup rather more than for common use, causes it to granulate, like citron, wifioh
This ohopped ine, as citror, makes an excollent substitute for thast artiole; and for very muoh less cost. Call in the neighborm, to holp eat about a dozen good sized melons, and you have outside enough for the experiment; and if the Dootor is near he will help without a fee. They are nioo, also, in minoo-pien in place of raisins.
CURRANTS-To Dry wimi Suanr.-Teke fully ripe currants, stemmed, 8 lba. ; mugar 1 lb .; put into a brass kettle, stirring at first, then as the currantu boil up to the top, skim them off; boil down the juloy syrup until quite thick, and pour it over the curranta, mixlog woil then place on suitable dishes, and dry them by - placing in a low box, over which you can place musquito-bar, to

When properly dried, put in jars and tie paper over them. Put cold water upon them and stew as other fruit for eating or pie-making, adding more sugar if desired.
tan-ward-To mend by the Heat of a Gandue.--Take a Thl nhout two-thirds full of muriatio acid, and put into it little ble of aheet ziate, this long as it uissoives them ; then put in a crumh of aul-ammonjao, and fill up with water, and it is ready to

## Wih the oork of the vial wot the plaoe to be mended,

with the preparation; then puta piece of sheet zinc over the hole and hold a lighted oandle or spirit lamp under the plaoe, which melts the solder on the tin and causes the zine to adhere without further trouble. Wit the zine also with the solution. Orn little solder inay be put on in place of the zino, or with the zine.
WATER FILTER-Home-MADE-Rain water is much healthier than hard water as a beverage; and the following will by found an oasy and cheap way to fit for drinking puxposen:
Have an ouk tub made, holding from half, to a barrel, according to the amount of water needed in tie family ; let it stand on end oottom, near the front bottom; or, I prefer a hole through the water from roting the ous, with a tube in it whish prevents the 3 or 4 Inohas in thloknouss ore of the tub ; then put cloan pebbles oharcoal pulverized to the ever the bottom of the tub; now have maple is beat) and put in half of small peas, (that inade from hard down quite frmly, then put in bushel or so at a time; pound It tub is flled to within 8 lnches of and pound ugain until the Inches more of pebblos ; then put the top; and again put on 2 over the whole top as a atraluer. a piece of clean white flannel
The flannel oan bo washed ocoasionally, to remove the impurities collected from the water, and it might be well to put = flannel between the pebbles and flannel at the bottom also. When the oharooal beoomes foul, it can bo renewed as bofore, but will work a whole season without renewing. Put on your water frooly until it becomes clear i when you will be as well satisfied as you would be if it ran through a patent filter, costing sir times as much as this.
A large jar to hold the filtered water can be set in an ice. box if preferrod; or an occasional piece of ioe can be $p$ :4 in tho water ; but if the filter is set in the collar as it wild be, the water will be sufficiently cool for health. $\therefore$ akes a good cidor filter, also, first straining the oidar antion to froe it from the coarsest pomace.
set zino over ip under the uses the zino ino also with in place of
water" is and the folit for dxink-
el, according stand on end through the prevents the loan pebblea ; now bave de from hard ; pound 14 in until the in pat on 2 hite flannel
cmove the bo well to the bottom o renewed renewing. when you through a
in an icé. an be $\mathbf{p}$ lar as it r health. the cidor

## My mothod of filling the fellies with the oil is as tollows:

I use a long, cust iron oll-heater, made for the purpose ; the ofl is brought to a ioolling heat, the wheel is placed on a stick, 80 as to hang in the oil, cach felly an hour, for a commontized felly. The timier chould be dry, as green timber will not take ofl. Care shonld lo taken that the oll be not mado hotter than a bolliny heat, in order that the timber be not burnt. Timber, flled vilth oll is not susceptible to water, and is much more desirable."

I was amused some time ago when I told a blacksmith how to keep tires tight on wheels, by his telling me it was a profitable business to tighten tires; and the wagon maker will say it is profitable to him to make and repnir wheelsbut what will the farmer, who supports the wheel-wright and the blacksmith say ? The greatest good to the greatest number, is my motto.

WEEDS-To Desitroy in Walks:-The following method to destroy weeds is pursucd at the mint in Paris, with good effect:

Water 10 gals. ; stone lime 20 lbs ; fiour of sulphur 2 lbs. Boll in an iron kettle; after settling, the clear part is to be pouired off and sprinkled freely apon the weedy walks.

Care must be taken, for it will destroy weeds; and as oertainly destroy edging and border flowers, if sprinkled on them.
Cembnts-Cement for China, do., which Stands Firt and Watre'- With a small camel's hair brash, rub the broken edges with a little carriage oil-varnish.

If neatly put iscether, the fraoture will hardly be perseptible, and when thonoughly dry will stand both fire and water.
2. Russian Oqment.-Mueh is said about cements; bat there is probably nothing so white and clear, and certainly nothing better than the following:
Russian 'singlass dissolved in puro soft water, anow water is best; for it tales 12 hours to soften it by soaking in pare soft Water, then considerable heat to dissolve It ; after which it is applicable to ítatuary, china, glass, alabaster, \&c., \&c.
 is eavy to rcason that if twelve to fifteen hours are required to sowten this isinglass (hat no dish-washing will over effect

## DR. ORASI'S REOTPES.

it. You may judge from the price whetner you get the Russian, for thirty-seven cents per ounoe, is as low as the genvine ariicle can be purohased in small quantities, whilst the common, bear a price of only from ten to twelve cents, and even less.
3. Cement, Cheap and valuable.-A durable cement is made by burning oyster shells and pulverizing the lime from them very ine; then mixing it with white of egg to a thlck paste, and applying it to the china or glass, and securing the pleces together
antil dry.
When it is dry, it takes a very long soaking for it to be some soft again. I have lifted thirty pounds by the stem of ${ }^{2}$ wine-glass whioh had been broken, and mended with this sement. Common lime will do, but it is not so good; either should be fresh burned, and only mir what is needed, for when once dry you eannot soften it.
4. Cevent-Water-Proof, for Clote or Belting.-Take ale 1 pt. ; best Russia isinglass 2 ozs. ; put them into a common glue kettle and boil until the isinglass is dissolved; then add 4 ozs. of the best common glue, and dissolve it with the other ; then slowly add 11 ozg . of boiled linseed-oil, stirring all the time while adding When you wish mixed. When cold it will resemble India-rubber. quantity of ale to have the consistence- of thick glae. It is applicable for earthenware, china, glass, or leather ; for harness, bands for machinery ; cloth belts for craoker machinse for bakers, \&o., sc. If for leather, shave off as if for sewing, apply the cement with a brash while hot, laying a weight to keep each joint firmly for 6 to 10 hours, or over night.

This cement will supersede "Spaulding's Prepared Glue," and all the white cements you oan soare up, if you use good artioles to make it of,-not less than thirty or forty cents a pound for common glue, and three shillings pert sunce for the Russian isinglass; bat the expense of this will cause it only to be used when dampness is to be contended with.

If you have not a glue kettle, take an oyster oan and punch somo holes through the top of it, putting in a string to suspend it on a stick in a common kettle of boiling water and keep it boiling in that way.
6. Cmment, or Furniture Glue, for Housm Usi-To mend marble, wood, glass, china, and ornamental ware-take water 1 gal.s utoe glue 3 lbs. ; whtte lead 4 ozz. ; whiskey $B$ qts.
ner you get the is as low as the uantities, whilst to twelve oents,
cement is made $\theta$ from them very thick paste, and te pieces together
ng for it to be s by the stem of nded with this so good; either is needed, for
tivic.-Take alo a common glue hen add 4 ozs. of er ; then slowly me while adding le India-rubber. sed in a suitable ne. It is appli: harness, bands for bakers, \&o., ply the cement ach joint firmly
repared Glue," o, if you use hirty or forty shillings pent ise of this will be contended
ster oan and ng in a string boiling water

To mond marwater 1 gal.s

Mix by dissolving the glue in the water; remove from the fire and stir in the white lead, then add the whiskey, which keeps it fluid, except in the coldest weather. Warm and stir it up when applied.
Whits Cemenst.-Take white (fish) glue, 1 lb .10 ozs. ; dry white lead 6 ozs. ; soft water 3 pts. ; alcohol 1 pt.

Dissolve the glue by putting into a tin kettle, or dish, containing the water, and set this dish into a kettle of water, to prevent the glue from being burned; when the glue is all dissolved, pat in the lead and stir and boil until all is thoroughly mixed; remove from the fire, and when cool enough to bottle, add the alcohol, and bottle while it is yet warm keeping it corked. This last recipe has been sold about the country for from twenty-five cents to five dollars, and one man gave a horse for it.
7. German Cemment-Two measures of litharge, and one each of anslaked lime and flint glass ; each to be pulverized eeparately before mixing ; then to use it, wet it ap with old drying-oil.

The Germans use it for glass and chin2-ware only. Water hardens it instead of softening.
8. Sorap-Boor Pasta or Cement.-A rieve of common glue 2 square inches ; dissolve it in water, addíng as much pulverized alum in weight, as of the glue; now mix flour $\frac{1}{2}$ teaspoon in a little water ; stir it in and boil. When nearly cool stir in oil of lavender 2 teaspoons.

This should make a pint of paste, which will keep a long time if tightly covered when not in use.

Cenment-Preventing Leaks aboot Chimnets, \&o.-Dry sand 1 pt. ; ashes 2 pts. ; clay dried and pulverized 3 pts.; all to be pulverized and mized into a paste with linseed oil.

Apply it while soft, as desired, and when it becomes hard water will have no effect upen it. It may be used for walks and I think it would do well in cisterns, and on roofs, \&o.
Magic Paper-Used to Transfer hqgores in Embrodoery, or Imprissions of Leaves for Herbarioms.-Take lard oil, or sweet oil, mixed to the consistence of cream, with either of the following paints, the color of which is desired : Prussian blue, lamp-blank, Venetian red or chrome green, either of which should be rubbed with a knife, on a plate or stone until smooth. Use rather thin, hut frm popor ; put oin wit in spougo and wipe oft as dry as convenient; then lay them between unoolored paper, or between newspapers, and press by laying books or some other flat snbstance upon them, until the surplus oil is absorbed, when it if ready for une.

## 8.0

## DR OHABE'S REOTPRS.

Dibsotions, - For taking off patterns of embroidery, place a piece of thin paper over the embroidery to prevent solling; then lay on the magic paper, and put on the cloth you wish to take the copy on, to embroider; pin fast, and rub over with a spoon handle; and every part of the raisel figure will show apon the plain cloth. To take impressions of leaves on paper, place the leaves between two slieets of this paper and rub over it hard, then take the leaf out and place it between two sheets of white paper; rub again, and you. will have a beautiful impression of both sides of the leaf or flower. Persons travelling without pen or ink, oan write with a sharp stick, placing a sheet of this paper: over a sheet of white paper.
RAT DESTROYERS-RAT ExTERR natór.Flour 3 lbs.; water only sufficient to make it into a thiek paste ; then dissolve phos phorus 1 oz., in batter 1 1-2 ozs., by hsat. Mix.
This you will leave, thickly syread on bread, where rats can get at it; or make into balls, whioh is preferable, coovered or rolled with sugar. If it is desired to sell this article and you wish to color to hide its composition, work into it pulverized turmerio 2 ozs. Or

## 2. Take warm water 1 It; bund 2 lles. ; phosphorus 1 oen Mis, and thicken with flour.

It is found best to make anly in small quantities, as the phosphorus loses its power by azposure. Some will oh ject to killing rats about the housi; but I had rather smold their dead carcases than taste their tail prints, loft on everything possible for them to get at, or suffor loss from their tooth prints on all things possible for tham to devour or destroy.
3. Death for the Old Sly Rax.-Some rats get sol cunning that it is almost impossible to overcoms theic shrewdness.
Then get a few grains of stry ohnine, having a little fresh lean meat broiled ; cut it into small bits, by using a fork to hold it, for if held by the fingers, they will smell them and not eat it ; catting with a sharp pen-kiife ; then cut a little bole into the bits, and put in a little of the strychnine, and close np the meat together again.
Put these on a plate where they frequent, but not near their holès, laying a piece of paper over the meat; whem

nt, but not near the meat; whem
these are eaten put more, for three or four days, and you are soon done with the wisest of them.
4. Rats-To Drive Away Aures.-If you choose to drize them away alive, take potash pulverized, and put quite plenty of it into all their holes about the hoise. If the potash is pulverized and Teft to the air, it becomes pasty ; then it can be daubed on the boards or planks, where they come through into rooms.

They will sooner leave, than be obliged to have a continual re-application of this "Doctor Stuff," every time they go through their holes. See "Potash, to Make."
5. Scotch mnuff, or puiverized cayenne pepper, mixed together, or separate ; if freely put into their burrowing-holes, will certainly sendithem off, at a sneezing pace.
6. Rat Poison-From Sir Humpiray Davz-a tasteless, odorless and infallable rat poison, he says, is made as follows:
" Mix carbonate of barytes, 2020. ; with grease 1 lb ."
It produces great thirst, consequently water must be set by it, for death takes place immediately after drinking, not giving them time to go back to their holes. I obtained this at such a late day, that I have not had an opportunity of testing it. Be sure that no other animal can get at it, except rats and mice, for it is a most deadly poison. Should this be found as effectual as recommended, it will prove just the thing for rat-killing, as they can be gathered up and carried away, thus avoiding the stench arising from their dead oarcasses.
FISE-Art of Catoming.-Mix the juice of loveage or amellage with any kind of bait, or a few drops of the oil of rhodium. India cockle, also (Coculus Indicus), is sometimes mixed with flour dough and sprinkled on the surface of still water. This intoxicates the fish and makes them turn up, on top of the water. Mallein seed, pulverized, and used in place of the India cockle is about equal to that article.

They may be eaten without fear, but this will destroy many fish. Oil of rhodium is the best plan.
"It is generally supposed," says Mr. R. I. Pell, "that figh ere not possesied of the sease of smeil. From the following experiments I am convinced they aro; I placed a hook, well bated with an angle-worm, enticingly before a perch weighing one and a half pounds; he did not take the
least notice of 1 lt . It was withdrawn, ani a drup of rhodium brought in contact with it, when it was dropped very carefully several feet behind him; he immediately turned and seized the bait. This experiment was several times repeated with like success. I find many varieties very sensitive to noise, and by numerous experiments am convinced that their sense of hearing is acute."
STRAW AND CHIP hats-To Vamnish Black.-Best alcohol 4 ozs.; pulverized black sealing-wax, 1 oz ; ; put them into a vial, and put the vial into a warm place, stirring or shaking occasionally, until the wax is dissolved ; apply it when warm, by means of o soft brush, before the fire or in the sun.
It gives stiffness to old straw hats or bonnets, makes a boautiful gloss, and resists wet; if anything else is required, just apply it to small baskets only, and see how nicely they
will look.
2. Strant Bonnets-To Color a Beauitfol Slate.-Firet ef de the bonnet in rather strong warm suds for fffteen minutes ; this is to remove sizing or stiffening ; then rluse in warm water, to get out the soap; now scald cudbear 1 oz, in sufficient water to cover the hat or bonnet-work the bonnet in this dye at 180 degrees of heat, until you get a little purple ; now bave a bucket of cold water blued with the exiract of indigo, about $\frac{1}{} \mathrm{oz}$, and vork or stir the bonnet in this, until the tint pleases.
Dry, then rinse out with oold water and dry again, in the shade. If you get the purple tco deep in shade, the final slate will be too dark. See "Eztract of Indigo, or Chemic."
stucco plastrining-For Brice and Gravel Hodseg.First make up as much mortar as you need for the job, with good commou lime ; using only $\frac{3}{4}$ or four-fifths, at most, as much lime as needed for common work; the other fourth or fifth is to be water-lime ; and not to be put in only as useci. The sand must be coarse, and free from loam or dirt.
To prepare the white and colored washes, run off common lime enouga with hot water, to make a white-wash to go over the whole job. This white-wash is to be colored the tint desired for the work. Be sure to make color-wash onough at one time, or you will find it hard to get the shades alike; "saving a little of the white-wash without color ; to pencil the seams, and also for specking as mentioued below. The colors used are lamp-blact, Spanigi-ivrown, or Verictian-red, as preferred, and thase are cut or dissolved in whiskey; then putting into the white-wash to suit.

When these wasnes are all prepared, wet ap as much of the mortar as can be put on in twenty or forty minutes, and mix in the fourth or fifth of the cement, and put on as fast as possible; Arst wetting the wall very wet with water. Some cement will set in 20 and some in 40 to 50 minutes. When you see the time necessary for tho kind you are using, act accordingly, and only mix the cement iuto as much mortar as your help will put on before it sets ; beginning at the top of the wall with your scafiolding and worki::g down, which prevents too much specking from the colors. Have a man to follow right after with a float, keeping the stucco very wet while floating down level and smooth; and the longer it is floated and wet, the better will be the job. Even after it is floated down well, keep a man wetting it with a brush until you get the whole line on, around the house, as the waterlime must be kept quite wet for some considerable time, to set properly. Heed this caution, and if water never gets in behind the plastering from bad cornice or loaky roofs, it will never peel off. When this line of scaffolding is plastered, take out enough of the color-wash, ruuning it through a seive, and go over the plastering ; lamp-black alone gives it a bluish slate color; if a little of the brown is added with the black, it will be a little reddish, and if the red is used without the brown, it will be quite red. I prefer sufficient of the black only to make a gray stone color. A brown, however, looks exceedingly well. If you choose, you can make one-half of the color-wash darker than the other-having laid it off into blocks resembling stone, by means of a straight-edge, and piece of board about half an inch thick, paint every other block with the darker wash to represent different shades of stone. Some of our best buildings are done in this way, and look well.

Then to give it a granite appearance, take a small paint brush and dip it into the white-wash, saved for this parpose ; strike if across a hammer liandle, so as to throw the specks from the brush upon the wall, then the same with black and red. Pencil the seams with the white-wash, which gives it the appearance of mon tar, as in real stone-work.

Now you are ready to move down the scaffold, and go over the same thing as befors. After the colors have been dissolved with spirits, they can be reduced with water. nr what is better for them and the color-wash also, is skimmed milk; and whero milk is plenty, it ought to be used in place of water, for white-wash or color-washes, as it helps to resist the weather, and provents the colors from fading-see "Phint, to Make without Lead or Oil," Which gives you the philosophy of using milk. Speck quite freely with the white, then about half as much with the black, and then rather free again with the red. The proportion of lime
probably, should not excced one, to six or seven of sand. Our University buildings, represented in the frontispicee, except the Laboratory, and Law-building, which have been more recently put up, are finished with it, and also whole blocks in the business part of our city.

Prof. Douglass' house is probably the pretticst color of any in the city-an imitation of "Free-stone," made with lamp-black, yellow ochre, and a larger proportion of Spanish brown. But all will have a preference for some special color ; then, with a little ingenuity and patience, nearly any celored stone can be initated.

GRAVEL HOUSES--To Make-Preparations of Limr, Sand, and Gravel.--It has become quite common to put up grave! houses; and many persons are at a great loss to know what proportions of materials to use. Various proportions have been proposed; but from the fact that the philosophy was not explained, no real light was given upon the subject.
All that is required to know, is, that sand and lime are to be nsed in proportion to the size of the gravel-say for 15 bushels of clean gravel, from the size of peas up to that of hen's eggs, it will take about 3 bushels of clean sharp sand and 1 of lime to fill the crevices withont swelling the bulk of the gravel. If the gravel is coarse, up to 5 bushels of sand may be required, but the lime will not need to be increased but very little, if any. Then the philosophy of the thing is this-abont 1 to 14 buskels lime to 15 bushels of gravel, and just sand enongh to fill the crevices without increasing the bulk as above mentioned.

If the gravel is free of dirt, the sand also elean, and the weather dry, the walls can be raised one fort each day, if you have help to do that amount of labor.

Some prefer \{: make the gravel and sand into mortar and press it into brioks; then lay into walls, but the wall must be stronge: if laid up solir, in board frames, made to raise up as required.

Many persons argue for the eight-square or octagon house, but I like the square form much the best, marrying up the hall and main partition walls of the same material. The eight-square house looks like an old fort, or water tank, and is very expensive to finish; costing muoh more than the same room with siquare angles, for meohanics cannot put up cornice outside, or in, in icss than double the time roquired for making the commosis square mitre. 7ant.

Prof. Winohell, of the University, and State Goologist, in this city, has put up one of the octagons. Which looks well, however, for the style of finish is what attracts attention, instead of the style of form.

## WHITEWASHES AND CHEAP PAINTS.-BrfL liant, Stuoco Whitewash-Will Last on Brick of

 Stone, Twenty to Thirty Years.-Many have heard of the brilliant stucco whitewash on the east end of the President's house at Washington. The following is a recipe for it, as gleaned from the National Intelligencer, with soms additional improvements learned by éxperiments:Nice unslacked limo $\frac{1}{2}$ bushel ; slack it with boiling water; cover it during the process, to keep in the steam. Strain the, liquid through a fino sieve or strainer, and add to it, salt 1 peck; previously well dissolved in water ; rice 3 lbs.-boiled to a thin paste, and stirred in boiling hot; Spanish whiting \& lb. ; clean nice glue 1 lb., which has been previously dissolved by soaking it well, and then hanging it over a slow fire, in a small kettle, immersed in a larger one filled with water. Now add hot water 5 gals, to the mixture, stir it well, and let it stand a few days covered from the dirt.

It should be put on hot. For this purpose it can be kept in a kettle on a portable furnace. Brushes more or less small may be used, according to the neatness of job required. It answers as well as oil paint for brick or stone, and is much cheaper.

There is one house in our city which had this applied twelve years ago, and is yet nice and bright. It has retained its brillianoy over thirty years.

Coloring matter, dissolved in whiskey, may be put in and made of any shade you like; Spanish brown stirred in will make red-pink, more or less deep, according to quantity. A delicate tinge of this is very pretty for inside walls. Finely pulverized common clay, well mixed,with Spanish brown, makes reddish stone color. Yellow ochre stirred in makes yellow wash, but chrome goes further, and makes a color generally esteemed prettier. In all these oases tho darkness of the shade, of course, is determined by the quantity of the coloring used. It is difincult to make rules, beoauce tastes are different-it would be best to try experiments on a shingle and let it dry. Green must not be mixod with lime. The lime destroys the color, and the color
has an offect on the whitewash, which makes it ornok and peel. When inside walls have been badly smoked, and you wish to make them a clean, clear white, it is well to squeere indigo plentifully through a bag into the water you use, bofore it is stirred into the whole misture, or blue vitxiol pulverized and dissolved in boiling water and put into whitowash, gives a bcautiful blue tint. If a larger quantity than five gallons be wanted, the same proportion should be observed.
2. Whitrwasir--Very Nicm for Rooms.-Take whitlog s lbs. ; white or common glue 2 ozs. ; stand the glue in oold water over night; mix the whiting with cold water, and heat the glue antil dissolved ; and pour it into the other hot. Make of a propar consistence to apply with a common whitewash brush.

Use these proportions for a greater or less amount. In England scaroely any other kind of whitewash is used.

A lady, of Black River Falls, Wis., who had one of my books, prote to me, expressing her thankfulness for the beauty of this whitewash.
3. Panty--To Make withoot Lead or Oil-Whiting 6 lbs. $;$ skimmed milk 2 qts. fresh slaked lime 2. ors. Put the lime into a stoneware vessel, pour upon it a sufficient quantlty of the milk to make a mixture resembling cream; the balance of the milk is then to be added; and, lastly, the whiting is to be crumbled upon the surface of the fluid, in which it gradually sinke. At this period it must be well stirred in, or ground as you would other paint, and it is fit for use.
There may be added any coloring matter that suits the fanoy (see the first whitewash for mixing colors), to be applied in the same manner as othes paints, and in a few hours it will become perfectly dry. Another coat may then be added, and so on until the work is done. This paint i of great tenacity, bears rubbing with a ooarse cloth, has little smell, even when wet, and when dry is inodoxous. The above quantity is sufficient for fifty-seven yards.-Annapolis Republican.
"We endorse the reoipe. The casein or curd of the milk, by the action of the caustio-lims, becomes insoluble, and has been used for time immemorial, as a lute for obemienl eaperiments. It is good, and, in comparison with white lead, a durable paint."-Moore's Rural New Yorker. Most of the obeap paints will require about three coatin.

White lead always requires two, but some people think because they get a cheap paint that one coat ought to make a good job. Two will generally do with any except white.
4. White Paint-a New Way of Manufacturing. -The following was communicated by a man who was formerly a carpenter in the U. S. Navy.
"During a cruise in the South Pacific, we went into the harbor of Coquimbo; and as the ship had been out a long time, she was covered with rust from stem to stern. It was the anxious wish of the commander that she should be restored to her original colors; but on examining the storeroom, it was ascertained that there was not a pound of white lead in the ship. In this emergenoy I bethought me of an expedient which concoeted an admirable substitute, composed of the following ingredients:-
"Air-slaked lime, pulverizedenntil it was of the fineness of Iour, which was then passed through a seive. Rice boiled in a large kettle until the substance was drawn entirely out of the grain ; the water, then of a plastio nature, was strained to separate the grain, \&o., from the clear liquid. A tub about the sive of a half barrel, of the prepared lime and rice water, was mized with 1 gallon of linseed oil ; and the material had so much the appearance of paint that a novice could not have told the difference.
"The ship was painted outside and inboard with the above mixture (which cost next to nothing), and never presented a finer white streak on her bends, or cleaner bolwarks and berth deck than on that occasion, and no other kind of white paint spas used during the remainder of the cruise."
If this is good for ships out and inboard, it is worth trying for fences and out-work requring a cheap whito paint.
6. Blace and Green Paint--Durables and Cheap, for Out-Door Wons.-Any quantity of charcoal, powdered; a sufficient quantity of litharage as a dryer, to be well levigated (rubbed smooth), with linseed oil ; and, when used, to be thinned with well boiled unseed oil. The above forms a good black paint.
By adding yellow oohre, an excellent green is produced, which is preferable to the bright green used by paintera, for all gardon work, as it does not fade with the sun.
This composition was frst usod ioy Dr. Parry, of Bath, on some spouts; which, on being examined, fourteen years arterwards, were found to be as perfect ass Then firat put, En.
6. Mixe Pant for Barns-Any Color-"- Mix water lime with skim milk, to a proper consistence to apply with a brush, and it Is reudy to use. It will adhere well to wood, whether smooth or rough, to brick, mortar or stone, where oil has not been used (in which oase it cleaves to some extent), and forms a very hard anbstance, as durable as the best oil paint. It is too cheap to estimate, and any one cen put it on who can use a brush."-Country Gentleman.

Any color may be given to it, by using colors of the tinge desired, dissolving in whiskey first, then adding in to suit the fancy, as in the first recipe.

If a red is preferred, mix Venetian-red with milk, not using any lime. It looks well for fifteen years. .
LIQUID, AND WATER-PROOF GLUES-LIQUD GLUE.-To have a good glue always ready for use, just pat a bottle two-thirds full of best common glue, and fill up the bottle with common whiskey ; cork it up; and set by for three or four days, and it will dissolve without the application of heat.

It will keep for years, and is always ready to use wiluout heat, except in very cold weather, when it may need to be set a little while in a warm place, before asing.
2. Imitation or Spadidina's Glue.-First, soak in cold water, all the giue you wish to make at one time, using only glass, earthen, or porcelain dishes; then by gentie hest dissolve the glue in the same water, and pour in a little nitric aoid, sufficient to giveithe glue a sour taste, libe rinegar, or from $\frac{1}{2} \mathrm{Oz}$ to $1 \mathbf{~ o z}$ to each pound of glue.

The acid keeps it in a liquic state, and prevents it from spoiling; as nice as Spaulding's or any other, for a very trifing expense. If iron dishes are used, the acid corrodes them and turns the glue black. Or :
3. Acetic acia 1 oz., pure soft water 6 ozs .; glue 3 ozs .; gum tragacanth 1 oz . Mix, and if not as thick as as ired, add a little more glae.

This heeps in a liquid state, does not decompose ; and is valuable for druggists in labeling ; also for house use ; and if furniture men were not prejudiced, they would find it valuable in the shop.
4. Water-Proor Glum-Is made by first soaking the glue in cold watcr, for an hour or twe, or until it becomes a little soft, yet retaining th original form; then taking it from the water, and disoolving it' by gentle heat, stirring in a little boiled linseedoll Would not fall off, as they now do, by the action of the atmosphere.

FIRE KINDLELRS. To make very nice fire kindieis, take rosin, any quaulliy, and melt it, putting in for each pound b.aing used, from 2 to 2 ozs. of tallow, and when all is hot, stir in pine saw-dust to make vory thlok ; and, while yet hot, spread it out about 1 inch thlok alpon bourds which bave fine saw-dust sprinkled upon them to provene ty from stlicking. When cold, break up into lamps about it insh Aquiarm, But if for salo take a thln board and press upon it, whille ycis narm, to lay it off into 1 inch scinares; this makes it break regutaily, if you press' the crease sufficiently deep, grease the maklug. board to prevent it from sticking.

Ote of theno blocks will easily ignite with a match, and burn with a strong blaze long cnough to kindle any wood fit to burn. The above sells readily in all our large towns and oitios, nt a great protit.
2. Moitt of the published recipos call for rosin 3 lbs. ; tar 1 qt ; and 1 gill of turpecitine; but they make a black, stioky mess of stuff, which aways keeps the hands daubed. On the other hand, this makes a rosin-colored kindler, whioh breaks nicely also when cold; and they are decidedly - nioo thing; and much more certain to start a fire than shavings. If the tar plan is used, 1 nt. is enough for 5 lbs . of rosin.

STAROH POLISH.-White-wax 1 oz, , spermaceti 2 ozs. ; melt them together with a gentlo heat.
Whon you have prepared a sufficient amount of starch, in the usual way, for a dozen pieces-put into it a plece of the polish the nize of a large pea; more or less, according to large or amali washings. Or, thick gum solution (made by pouring boiling water upon gum arabic), one table-spoon to a pint of ataroh, gives clothes a beantiful gloss.
PEROUSSION MATCHES-Of Thl Best Quality.-Chlorate of potash $\frac{1}{} \mathrm{lb}$. glue 3 lbs ; white lead, dry, 5 lbs. ; red lead 1 lb, ; Phomphorus 24. lbs. Directrons.-First put the chlorate fito a dish mnde for the purpose, deep and of a suitable size to set into a kettle of water, which can be kept on the fire for two or three dayn, having 2 qta. of water on the chlorate ; then put the glue on tod of the olllerate watcr, anä let soak until all is perfectly dissolved then add the leads and heat up quite bot, and thoroughly mix; let cool and add the phosphorus ; let it dissolve, and be carrefll never to hext hot after the phosphorus is added; stir
ocomalonally while dilpplog, and if little particles of phosphorus Ares puah them down finto the mixture, or put on warm water; fif you pat on cold water it will fy all over yon. Keep it rather thin after the phonphorus is put In, and there will be no danger ; although the chlorato of potash is considered a dangerons article to work with ; so la powdor, yet when you know how to work with them, yon can do an hafoly with one as the other. When dry give them a coal of varniah.

I have boen acquainted with a man for about fourteen years who makes them, and several others for a less time, without trouble or accident. A better matoh was never made to stand dampness, or bear transportation without setting on fire. I have used and sold them much of the timo and speak from knowledge. One explosiof has sinee taken place.

The plan pursued hore in preparing the splints is as follows: Sawed pino timber from four to eight inohes each way, is out off the right length for the match, then one end of it is shaved smooth, with a drawing-knife; the blook is held upon the horso by a- brace from the top of the horses' head against the back sido of the block, so as to be out of the way of the knife instead of putting the blook under the jaws of the horses' head, as the dents made in the end of matoh timber would not answer; the front edge comes against a strip put on for that purpose; then glue the other end and pat on brown paper, which holds them together when split; machines are used to split with which feeds up the blook enough eaoh time the knife is raised, to make the size of the matoh when split the other way, or about ten to the inch. These machines cost about fifty dollars, and the work goes ahead like a young saw-mill, by simply turning 2 crank.

There are two standards boited upon a baso plank, four! feet in length ; these standards support a shaft, with orank and balance wheel, which is two feet in diameter; the shaft has upon it an oval wheel, which sinks the knife, twice in each revolution, the knife passing down through a space in a thin iron strip, standing out from the two blocks, under which the match block passes by the drawing of the chain seen to pass over a small drum, upon the shaft of the rag wheel, the notches being only one-fourth inch apart, and fed up by the hand, attached to
the fron frame being kept back to the cam wheel, which has two swells upon it, by a light spring.

The hand is kept down into the cogs or notohes, by the
little spiral wire spring; the match-block to be split, sete in the frame forward of the block, whioh has a pin in it to draw back the frame.

When the block of matohes is split, this frame gocs forward to touch a catch, the same as a saw-mill, whioh lets another spring raise the hand, when the feeding operation ceases. The frame is then drawn back and the same repeated.
splints is as folight inohes each $h$, then one end fe; the blook is p of the horscs' as to be out of blook under the in the end of ont edge comes a glue the other them together which feeds up sed, to make the or about ten to dollars, and the simply turning ,ase plank, four ! haft, with orank diameter; the inks the knife, down through t from the two passes by the a small drum, hes being only and, attached to
about fourteen for a less time, atoh was never ion without setuch of the time has since taken -. .

As the matel is split they open and require a rounding mortice made through the base plank between the bloeks, which allows them to remain in a half circular form-the knife is raised by a line attached to a spring pole, the knife is screwed upon a piece of cast-iron which works in the guide, having the back end firmly twisted by a bolt through one of the standards. Thisknife stands at right angles with the shaft.

When the matches are split and sufficiently dry to work upon, they are dipped in melted brimstone, kept hot, and the matoh also kept hot on a sheet iron stove, and all the brimstone is thrown off which can possibly be by jerking the block with the hand.

If any brimstone remains upon the end it must be soraped off before dipping into the match composition. Withont the chlorate, he composition makes a first-clasm

## 832

"Friction Mateh." It ought to be known, however, that the match business is an unhealthy occupation, from the poisonous effects of the phosphorous.

STEAM BOILERS.-To Prevent Lime Deposits.-Put into your cistern or tank, from whicn the boiler is fed, a sufficient anount of oak tan-bark, in the piece, to color the water rather dark; run 4 weeks and renew.

This plan has been mach used in the lime-stone sections of Washington, $O$., giving general satisfaction.
2. Ohio Rryer Plan.-Spronts from barley, in malting, are secommended by Captain Lumm. part owner of a steamboat, and engineer on the Ohio and Mississippi Rivers, to prevent the deposit of lime upon boilers, and he says tightens up old leaky boilers, also. It may be used in quantitios of from 3 pts. to 2 or 3 qts., according to the size of boilers.

When it is put in you must know the quantity of water in the boiler, for unicss you heat up quite slow it causes a poaming of the water, and might deceive the engineer about the amount of water in the boiler, but, if heated up slow there is no danger of this deception.
3. To Prevent Explosion, with the Reason why taey Explode.-At a recent mecting of the Associarion for the advancement of seience, Mr. IIyatt, of New York, provented what we believe to be the true cause. He presented the following table, showing the rapidity with whieh pressure is doubled by only a slight increase of heat.

At 212 degrees of heat water begins to boil : at 868 degrees iron becomos of a red heat.

212 degrees of heat. 15 ponnds to square inch.

| 251 |  | " | 30 |  |  | ${ }^{\prime}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 464 | " | " | 480 | " | " | " |
| 868 | " |  |  | " |  |  |

it was stated by Mr. Hyatt, that, from experiments he had made, this great increase of pressure could be obtained in six to seven minutes, with an engine at rest. This rapid doubling of pressure, with but a small increase of heat, is due to the converbion of what is termed latent heat, in steam into sensible beat. If we :mmerse $\boldsymbol{n}$ thermometer into boiling water, it stands at 212; if we place it in steum immediataly abovo the water, it indicates the same temperature. The question then arises, what becomes of all the heat which is cocumunicated to the water,
since it ls neilher indicated by the water nor by the steam formed from it? The answer is, it enters the water and converts it late steam withont raising its temperature. One theusand degrees of heat are absorbed in the conversion of water into steam, and this is called its latent heat. And it is the sudden conversion of latent heat inte sensible heat that produces the explosion. If an engine is stopped, even if there is but a moderate fire, if the escape valve is closed, there is rapil absorption or accumalation of latent beat. The pressure rises with great rapidity, and when the engineer thinks everything is safe, the explosion contes,

That this is the true cause of nearly all the explosions that occur, will be plain to every one who will look at the relations between latent and sensible heat. Prof. Henry and Prof. Silliman, Jr., endorse the view. What, then, is the security against explosions? We know of no securities but these-a sufficiency of water in the boilers, and the escape valves open at light pressure, when the engine is at rest.-SSpringfield Republican.

There is no question about the foregoing explanations being founded in true philosophy; and if engineers will be governed by them, instead of by a desire to hold on tosteam for the purpose of getting ahead or of keeping ahead, as the ease may be, of some other boat; or on land, to save the expense of fuel, not one explos; would take place where now there is at least a hundred Awful will be the reckoning with theor murderers; for in Heaven's sight they are ono and the same.

A series of experiments have recently been concluded on the U. S. Steamer Michigan, and a full but voluminous report iaid before the Navy Department, upon the subject of steame expansion. It would pay all interested in steam works to obtain and read it.
plunis and other fruit-To Prevent insects from Stinanca.-Take new dry lime, Sulphur and gunpowder, equat parts, pulverized very fine, and throw it amengst the fluwers when in full bleom ; use it freely, so that all may catch a little.
This has been tried with success. Working upon the prinoiplo of pepper, to keep flies from meat. The injury to fruit being done while in blossom.
bed-room carpets-For Twelve and a Half Cents pem YARD. - Sew together the cheapest cotton cloth, the size of tha room, and tack the edges to the floor. Now paper the cloth you would the sides of a room, with chap roompaper; pro
ting a border around the edge if desired. The paste will be the beiter if a little gum arable is mized with it. When thoronghly dry, give it two coats of furniture or carriage varnish, and when dry it is done.

It can be washed; and looks well in proportion to the quality and figure of the paper used. It could not be oxpeeted to stand the wear of a kitohen, for any length of time, but for bed-rooms it is well adapted.
coffee-more Heavthy and Better Flayored, for OntFourti the Expense of Common.-Coffee, by weight or measure, one-fourth, rye three-fourths.

Look them over separately, to remove bad grains; then wash to remove dust, draining off the water for a moment as you take it with the hands from the washing water, puitting directly into the browning skillet, earefully stirring all the time, to brown it evenly. Brown each one separately; then mix evenly, and grind only as used; settling with a beatened egg, seasoning with a little oream and sugar as usual.
And I do sincerely say the flavor is better, and it is one hundred per cent. more healthy than all coffee.

You may try barley, peas, parsnips, dandelion roots, \&o., but none of their flavors are equal to yye. Yet all of them are more or less used for coffee.
PICKLING FRUITS, AND CUCUMBERS--Hicklavg Apples.Best vinegar 1 gallon; sugar 4 lbs. ; apples all it will cover handsomely; cinnamon and cloves, ground, of each 1 tablespoon.

Pare and core the apples, tying up the oinnamon and cloves in a cloth and putting with the apples, into the vinegar and sugar and cooking until done, only. Keep in jars. They are nicer than preserves and more healthy, and keep a long time; not being too sour, nor too sweet, butan agreeable misture of the two. It will be seen below that the difigrent fruits require different quantities of sugar and vinegar, the reason for it is, the difference in the fruit.
1 2. Prckinga Peaches.--Best vinegar 1 qt. ; sugar 4 lbs.; peaches; peeled and stoned, 8 lbs ; spices as desired, or as for apples.

Treated every other way as apples. If they should begin to ferment, at any time, simply boil down the juice; then boil the peaches in it for a few minutes only.

## MTSCEMLANEOUS DEPARTMEENT.

335
3. Praohes-To Prel.-In peeling small peaches with a knife, too much of the peach is wasted; but by having a -wire-age, similar to those made for popping corn; fill the cage with peaches, and dip it into boiling water, for a moment, then iuto cold water for a moment, and empty out; going on in the same way for all you wish to peel. This toughens the skin and enables you to strip it off, saving much in labor, as also the waste of peach. Why not, as well as tomatoes?
4. Pickizusa Plouns.-Best vinegar 1 ptt; ; sugar 4 lbs.; plams 8 lbs. ; spices to taste.
Boil them in the mixture until soft; then take out the plums, and boil the syrup until quite thick and pour it over them again;
5. Praczuna Cucoubsers,-Pick each morning; stand in weak brine 3 or 4 days, putting in mustard pods and borse raddish leaves to keep them green. Then take out and drain, covering with vinegar for a week; at which time take out and drailn again, y'itting into new vinegar, adding mustard seed, ginger root; cloves, pepper and red pepper pods, of each about 1 or 2 ozs. ; or to suit different tastes, for each barrel.
The piokles will be niee and brittle, and pass muster at any man's table, or market. And if it was generally known that the greenness of pickles was caused by the action of the vinegar on the copper kettle, producing a poison (verdigris), in which they are directed to be scalded, I think no one would wish to have a nice looking pickle at the expense of health; if they do, they can continue the bad practice of thas scalding, if not, just pat your vinegar on cold, and add your red peppers, or cayennes, cloves, and other spices, as desired; but the vinegar must be changed onco, as the large amount of water in the cucumber reduces the , vinegar so muoh that this change is absolutely necessary; and if they should seem to loso their sharp taste again, just add a little molassos, or spirit, and all will be right.
sandstone-To Prevent Scalina br Frobs.-Raw linseedoil, 2 or 3 coats.
Apply in place of paint, not allowing the first coat to got entirely dry until the next is applied; if it does, a Blin is formed which prevents the next from penctrating the stone. Poorly burned briok will be equally well preserved. by the same procees.

SEALING WAX-Red, Black, and Blur.-Gram shellao 8 ozs.; Venice turpentine 4 ozs.; vermillion 2/1-2 ozs. ; alcohol 2 ozs.; camphor gum 1-2 oz. Dissolve the camphor in ins alcohol, then the shellac, adding the turpentine, and finally the vermillion, being very careful that no blaze shall come in contact with its fumes; for if it does, it will fire very quickly.
Blue.-Substitute fine Prussian-blue for the vermillion, same quantity.

Buacs.-Lamp-black only sufficient to color. Either color mast be well rubbed into the mixtura.

ADVICE-To Yonng Men and others out of Em-ployment.-Advice-How few there are who will hear advice at all; not because it is advice but from the fact thrie those who attempt to give it are not qualified for the work they assume, or that they endeavor to thrust it upon their notice at an inopportune time; or upon persons over whom no control is acceded, if claimed. But a book or paper never give offence from any of these oauses, therefore, they are always welcomed with a hope that real benefit nay be derived from their suggestions. Whether that end will be attained in this case, I leave to the judgment of those for whom it is intended; hoping they may find themaelves safficiently interested to give it a careful perusal, and candid consideration. And although my remarks must, in this work, be necessarily short, yet every sentence shall be 2 taxt for your own thoughts to contemplate and enlarge upon; and perhaps, in some future addition of the work, I may take room and time to give the subject that attention which is really its due: and which would be a pleasure to devote to its consideration.

First, then, let me ask why are so many young mon and other persons ont of employment? The answer is very posi" tive as, well as very plain. It is this-indolence, coupled witl a determination that they will do some great thing, only. And because that great thing does not turn up without effort, they are doing nothing. The point of difficulty is simply this: they look for the end, before the beginning. But just consider how few there are that really accomplish an great thing, even with a whole life of industry and cconomical persoverence. And yet most of our youth calculate that their beginning shall be amongst the greats. But as no one comes to offer them their expectations, indolence rays wait,
and so thoy are still waiting. Now mind you, as long as yo:r expectations are placed upon a chance offer of something ve:y remunerative, or upon the assistance of others; even in a small way, so long will you continue to wait in vain. At this point, then, the question would arise, what can be done $?$ and the answer is equally plain with the other. Take hold of the first job you can find, for it will not find you." No mattor how insignificant it may be, it will be better than longer idleness; and when you are seen doing something for yourself, by those whose opinions are worth any consideration, they will soon offer you more and better Jobs; until, finally, you will find something which agrees with your taste or inclination for a life business. But remember that the idle never have good situations offered them. It is the industrious and persevering only who are needed to assist in life's great struggle.
There are a few lines of poetry called "The Excellent Man,", which advocates the principles I am endeavouring to advance, so admirably, that $I$ cannot deny myself the plea. sure of quoting them. The old proverb, "God helps those who help. themselves," is as true as it is old, and after all that is said and done, in this conntry, if in no other, a man must depend on his own exertions, not on patronage, if ho would have or deserve success :

They gave me advice and counsel in etore, Pralped me and honored me more and more; Said that I only should ' wralt awhile', Offered their patronage, too, with a smille.
"Bnt'with sll their honor and approbation, 1 ahould loag ago havo died of starvation, Had there cot como an excelievt man, Who, bravoly to help me along bogar.
"Good fellow I he got me the food I'ate, His kindness aud care I shall nover forget ; Fet 7 cannot ombrace him-though other foiks can Up then, and at it, for theré is

Knittiog and sewing, and reaping and mowing, And all kinds of work for the people to do. To heep themsiolres busy, both Auram and Lizzio ; Begin thon, ye idle, thero is pionty for you.
When you have found a situation or a job of work, prove yourself honest, indristrious, persevering, and faithifl in
cvery trust, and no fears need be apprehended of your final success. Save a part of your wages as a sinking fund, or rather as a floating fund, which shall keep your head above water in a storm; or to cnable you, at no distant day, to commence a business of your own.
A poor orphan boy, of fourteen, once resolved to save half of his wages, which werc only four dollars per month, for this purpose; and actually refused, cven in sickness, although really suffering for, comforts, to touch this business fund. He was afterwards the richest man in St. Louis.
His advice to young men was aiways this: "Go to work; uave half your wages, no matter how small they may be, until you have what will euable you to begin what you' wish to follow ; then begin it, stick to it; be economical, prudent, and careful, and you cannot fail to prosper."
My advice is the same, with this qualification, however; that in choosing your occupation, you shouid be governed by the eternal principles of right never chocsing that which when done, injures a fellow creature more than it can possibly benefit yourself-I mean the liquor traffio. But with the feeling of St. Paul, when he saw the necessity of doing something different from what he had been doing, he oried out, "Lord, what wilt thon have me to do?" Ask your own tastes, being governed by conscience; under the foregoing principles; knowing that if a person has to learn a trade or business against his own inclination, it requires double diligence to make only half speed, and hardly ever meeting with success.

The question to be settled, then, is this: Shall I work the soil ; shall I be a mechanio, teacher, divine, physician, lawyer, merchant, druggist, or grocer, or shall it be something else? Whenever you make up your mind what it shall be, make it up, also, to be the best one in that line of business. Set your mark high, both in point of moral purity and literary qualifications.

If you choose any of the occupations of trade, you must save all that it is possible for economy and prudence to do, for your beginning.

But if you choose one of the learned professions, you must woris with the same care and prudence until you have socumulated sufficient to make a fair commencement in yous

## MISOELLANEOUS DEPARTMENT.

389 studies; then prosecute them in all faithfulness as far as the accumulated means will advance you; realizing that this increase of knowledge will give you increased power in obtaining the further means of proseouting your studies, necessary to qualify you to do one thing only in life.

Nearly all of our best men are self-made, and men of ono idea, 3 . e., they have set themselves to be mechanics, phyijicians, lawyers, sculptors, \&o., and have bent their whole energies and lives to fit themselves for the great work before them. Begin then; offer no exouse Pe sure' you are on the right track, then yo ahead:

> "Live for something," slotliful be no longer, look around for some omploy;
> Late handsays makes you stronger, ant also gives you sweetest joy. Lite for us, ohbuld not weary: fatluful hearts are aro alwaya gay ;

Always remembering ; nor can it, to the active, every day. keep ahead of his ment; but indolonce is giving time for pleasure and enjoy. work, and no prospect ever behind; being driven with hes

When rou proce of its ever being accomplished. yon must necessare made your decision, aside from what time given to the study of the best works upon the subjeot of your occupation or profession, knowing that one hour's reading in the morning, when the mind is calm and free from fatigue, thinking and talking with your companions through the day upon the subjects of which you have been reading, will be better than twice that time in evening reading, yet if both can be enjoyed, so much the better; but one of them must certainly be occupied in this way.

If you choose something in the line of mercantile or trade life, do not put off, too long, commencing for yourself. Better begin in a small way and learn, as your capital inoreases, how to manage a larger business.
I knew a gentleman to commence a business with fivo dollars, and in two weeks his capital was seventeen dollars, besides feeding his family.

I knew one also to begin with sixty dollars, and in fifteon months he oleared over four hundred and fifty dollars, besides supporting his family; then he sold out and lost all before ho again got into successful business.

No person should over sell out, or quit an honorablo pay. ing businems.

Those who ohoose a professional life, will hardy and a place in the West, equal to the University of Michigan, Ann Arbor, to obtain their literary qualifications. An entrance fee of Ten Dollars, with Five Dollars yearly, pays for a full Literary, Law, Medical, or Civil Engineering course; the first requiring four, the next two, and tho last three years.

Or, in the words of the oatalogue: "The University, having been endewed by the General Government, affords education, without money and without price. There is no young man, so poor, that industry, diligence and persoverance, will not enable him to get an education here.
"The present condition of the University confirms this view of its character. While the sons of the rich; and of men of more or less property, and, in large proportion, the sons of substantial farmers, mechanics, and merchants, are educated here, there is also a very considerable number of young men dependent entirely upon their own exertionsyoung men who, accustomed to work on the farm or in the mechanic's shop, have become smitten with the love of knowledge, and are manfully, working their way through, to a liberal education, by appropr:ating a portion of their time to the field or the workshop.

Persons wishing to qualing themselves for teaching in this State, will find the Normal Nohool, Ypsilanti, undoubtedly preferable.

And that none may excuse themselves from an effort bocausa somewhat advanoed in life, let me say that Dootor Ebarle, who wrote several valuable medical works, did not begin his medical studies until forty-five years of age; and altinugh I could mention many more, I will only add, that I, myself, always desired to become a physician, yet circumstances did not favor nor justify zay commencement until I was thirty-eight. See the remarks following "Eyo Water."

There is no occupation, however, so free and indepondent as that of the farmer; and there is none, except parents, eapablo of using so great an influence, for good or for ovil, as that of teacher.

All might and ought, to a greater or less extent, be furm ers ; but all oannot be toachers. Then let those whos
tasto inelines them to teach, not shrink the respopsibility, but fully qualify for the work; learning also the ways of Truth and Righteousness for themselves ; teaching it through the weck-school, by action as well as by word, and in the Sabbath-school fail not to take their stand for the right, like our President elect; then when it oomes your tura to assist in the government of the State or Nation, the peoplo will oome to your support as you do to your werkas they have just done to his. (1860); feeling, as now, that the government mast be safe in the hands of those who love God-deal honestly with their fellows; and wha, ic remembering the Sabbath to kep it holy themselves, are not ashamed-nor forget to teach the children to iove the same God, and reverence His Word. Only thinl--a SabbathSohool Teaeher-a Rail Splitter-a Boatman, EZresident of
the United Sta

Who will hereafter be afraid of common iabor; or let indolence longer provent their activity? when it is only those who begin with small things and persevere through life, that reach the final goal of greatress; and, as in this case, are crowned with the greatest honor which man can receive-the confidence of his Nation.
Then let Industry take the plase of Indolence, beginning to be great, by grappling with the small things of life-be faithful to yourself, and you may reasonably expeot the ped shall indeed be great.

And although it could not be expected, in a work of this kind, that much could or would be said directly regarding a future life, yot I should be recreant to duty if I did not say a word mure upon that subject. It shall be only a word. Bo as faithful to God, as I have recommended you to be to yourself, and all things pertaining to a futare, will be equally prosperous and glorious in its results.

## GRAMMAR IN RHYME-For the Little Folks-

 following lines contain, comprised in so brief a space. Every young grammarian, and many older heads, will find it highly advantagcous to commit the "poem" to memoryfor. with these lines at the tongue's end, none noed ever mistake a part of speech :

> 1. Three littlo words you often see, Are articles-a, an, and the
> 2. A Noun's the name of any thing, As school or garden, hoop or swing.
3. Adjectives tell the lind of Noun, As great, small, pretty, white or brovon.
4. Instead of Nouns the Pronouns standHor head, his face, your arm, my hand.
5. Verbs tell of something to be doneTo ;ead, count, sing, laugh, jump or run.
6. How things are done the adverhs tell, As slonoly, yuicichy, ill or well:
7. Conjunotions join the words ongetherAs men and women, wind or weather.
8. The Preposition stands before
A Noun, as in, or through a door.

## 9. The Interjection shows surprise, As oh / how pretty-ah / how wise.

## The whole are called Nine Parts of Speecin, <br> Which reading, writing; speaking teach.

muSICAL OURIOSITY-Sootch Grious in Thacama.-A Higarland piper, having a scholar to teach; disdained to craok his brains Fith the names of semibreves, minims, crotchets and quavers. "Here, Donald," said he, "tak' yer pipes, lad; and gie us a blast. So-verra weel blawn, indeed ; but what's a sound, Donald, Fithont sense? Ye mann blaw forever without making a tune $0^{\prime}$, if I dinns tell you how the queer things on the paper mana help you. Tou see that big fellow wi a round, open face? (painting to a semibreve between two lines of a bar.) He moves slowly from that line to this, while ye beat ane 'wi' yer fist, and gle us a long blast. If, now, ye put a leg to him, ye mak' twa o' him, 'and he'll move twice as fast; and if ye black his face, he'll run four times faster than the fellow wi' the white face; but if, after blacking his face, ye'll bend his knees or tie his leg, he'll hop eight times faster than the whitefaced chap I showed you first. Now, whene'er ye blaw, yer pipes, Donald, remember this-that the tighter those fellows' legs are tied, the faster they'll run, and the quicker they're sure to dance.
That is, the more lega they have bent up, contrary to nature, the faster goes the musip.

COLORING DEPARTMENT.
RAMARKS.-It may be necessary to remark, and I in it here, onoe for all, that every article to be dyed, as well as overything used abont dying, should be perfeetly olean.

In the next plane, the article to be dyed should be well sooured in soap, and then the sorp rinsed out. It is also an advantage to dip the article you wish to dye in warm water, just before purting it into the alum or other preparation; Tor the negleet of this precaution it is nothing uncommon to have the goods or yarn spotted. Soft water should alwayn bo used, if possible, and sufficient to cover the goods handsomoly.

As moon as an artiele is dyed it should be aired a little, thon woll rinsed, and afterwards hung up to dry.

Whon dyeing or scouring silk or merino dresses, eare ahould bo taken not to wring them, for this has a tendency to wrinkle and break the silk.

In puttiug dresses and shawls out to dry, that have been dyed, they should be hriug up by the edge so as to dry ovonly.

Great confldence may be placed in these coloring recipes as the author has had them revised by Mr. Storms, of thiw, oity, whe has been in the business over thirty years.

COLORS ON WOOLEN GOODS.

1. OHROME BLAOK-SUperior to Any in Use.For 5 lbs, of goods-blue vitriol 6 ozs.; boil it a few min. ntes, then dip the goods $\frac{8}{4}$ of an hour, airing often; take out the goods, and make a dye with logwood 31bs.; boil $\frac{7}{2}$ hour; dip ${ }^{3}$ of an hour and air the goods, and dip $\frac{8}{4}$ of an hour more. Wash in strong suds.
N. B. -This will not impart any of its color in fulling, nor fade by exposure to the sun.
2. BLAOK ON WOOL-For Mixtures.-For 10 Ibs. of wool-bi-cliromate of potash 4 ozs. ; ground argal 3 ozs. ; boll togetiter and put in the wool; stir well and let it remain in the dye 4 hours. Then take out the wool, rinse it slightly in olear water; then make a new dye, into which

## DR. OHABE'S REOTEES.

put logrood 31 lbs. Boil 1 hour, and add chamber-ley 1 pt., and lot the wool lio in all night. Wash in olcar water.
3. STEEL MIX-DARIK.-Black wool-It may bo natural or colorod, 10 lbs . White wool $1 \frac{1}{2} \mathrm{lbs}$. Mix evenly together and it will be beantiful.
4. SNUFF BRGWN-DARk, For Clotir on Wool.For 5 lbs . goods-oamwood 1 lb . ; buil it 15 minutes then dip the goods for e hour; tako out the goods, and add to the dye, fustic 21 lbs. : boil 10 minutes, and dip the goods thour; then add bluo vitrol 1 oz .; copperas 4 ozs ; dip again $\frac{1}{2}$ hour ; if not dark onough, add moro copperas. It is dark and permanont.
5. WINE OOLOR.-Tor 5 lbs goous- ramwood 2 lbs .; boil 15 minutes and dip the goods is hour; boil again and dip $\frac{1}{2}$ hour ; then darken with blue vitrol $1 \frac{1}{2}$ ozs.; if not dark enough, add copperas $\frac{1}{2}$ oz.
6. MADDER RED.-To each lb. of goods-alum 5 ozs.; red, or oream of tartar 1 oz ; put in the goods and bring your kottle to a boil for $\frac{1}{2}$ hour ; then air them and boil $\frac{1}{2}$ hour longer ; then ompty your kettle and fill with clean water, put in bran 1 peek; make it milk warm and let it stand until the bran rises, then skim off the bran and put in madder $\frac{1}{2} \mathrm{lb}$.; put in your goods and heat slowly until it boils and is dono. Wash in strong suds.
7. GREEN- On Wool or Silf, witi Oak Babk.Make a strong yellow dyo of yellow oak and hickory bark, in equal quantities. Add tho extract of indigo or chemic (which see), 1 tablospoon at a tine, until you get the shado of color desired. Or:
8. GREEN-Witir Fustio.-For each lb. of goodsfustic 1 lb . ; with alum $3 \frac{1}{2}$ ors. Steep until the strength is out, and soak the goods therein until a good yellow is obtained; then remove the chips, and ard extract of indigo or chemio, 1 tablo-spoon at a timo, until the color suits.
9. BLUE-Quick Prooess.- Vor 2 lbs, of goods-alum 5 ozs. ; crean of lartar 3 ozs ; boil the goods in this for 1 hour; then throw the goods into warm water, which has more or less of the oxtract of indigo in it, according to the
 more of the blue if needed. It is quick and permanent. bring the water to a boil, putting in the wool and boiling 1 hour; then throw away the dye and make another dye with logwood chips 1 J ., or extract of logwood $2 \frac{1}{4}$ ozs., and boil 1 hour. This also works very prettily on silk.
N. B. -Whenever you make a dye with logwood chips either boil the chips $\frac{1}{2}$ hour, and pour off the dye, or tie up the chips in a bag and boil with the wool or other goods, or take $2 \frac{1}{2}$ ozs. of the extract in place of 1 lb . of the ohips is Tess trouble and generally the better plan. In the above recipe the more logwood that is used the darker will be the shade.
11. SCARLET, WItH COCHINEAL.-For Yarn or Cloth.-For 1 lb . of goods-cream of tartar $\frac{1}{2} \mathrm{oz}$.; cochineal, well pulverized, $\frac{1}{2} \mathrm{oz}$. ; muriace of tin $2 \frac{1}{2} \mathrm{ozs}$.; then boil up the dye and enter the goods; work them briskly for 10 or 15 minutes, after which boil $1 \frac{1}{2}$ hours, stirring the goods slowly while boiling woll is olear water and dry in the shade.
12. PINIK.-For 3 lbs . of guods-alum 3 oas., boil and dip the goods 1 hour ; then add, to the dye, cream of tartar 4 ozs. ; cochineal, well pulverized, 1 uz . ; boil well and dip the goods while boiling, until the color suits.
13. ORANGE.-For 5 lbs. of goods-Muriate of tin 6 table-spoons; argal 4 ozs. ; boil and dip 1 hour ; then add to the dye, fustic $2 \frac{1}{2}$ lbs. ; boil 10 minutes, and dip $\frac{1}{2}$ hour, and add, again, to the dye, madder 1 tea-cup; dip again $\frac{1}{2}$ hour.
N. B.-Cochineal in place of madder makes a much brighter color, which should be added in small quantities until pleased. About 2 ozs.
14. LAC RED.-For 5 lbs. goods-argal 10 ozs. ; boil a few minutes; then mix fine ground lao 1 lb . with muriate of tin 11 lb ., and let them stand 2 or 3 hours; then add half of the lae to the argal dye, and dip $\frac{1}{2}$ hour; then add the balanee of the lac and dip again 1 hour ; keep the dye at a boiling heat, until the last half hour, when the dye may be oooled off.
15. PURPLE.-For 5 lbs. goods-cream of tartar 4 ozs.; alum 6 ozs.; cochineal, well pulverizod, 2 ozs. ; muriatc of tin $\frac{1}{2}$ tea-cup. Boil the cream of tartar, alum and tin 15 minutes; then put in the cochineal and boil 5 minutes; dip the goods 2 hours; then make a new dye with alun 4 ozs. ; Brazil wood 6 ozs. ; logwood 14 ozs ; muriate of tin 1 tea-cup, with a little chemív; work again until pleased.
16. SILVER DRAB-Liaut.-For ${ }^{8}$ lbs. goods-alum 1 small teaspoon, and logwood about the same amount; boil well together, then dip the goods 1 hour; if not dark enough, add in equal quantities alum and lugwood, until suited.
17. SLATE, ON WOOLEN OR COTTON_WITH Beach Bark.-Boil the bark in an iron kettle, skim out the chips after it has boiled sufficiently, and then add copperas to set the dyc. If you wish it very dark add more copperas. This is excellent for stockings.
18. EX'TRACT OF INDIGO OR CHEMIO-TO Make.-For good chemic or extract of indigo, take oil of vitriol $\frac{1}{2} \mathrm{lb}$., and stir into it indigo, finely grcund, 2 ozs ., continuing the stirring at tirst for $\frac{1}{2}$ hour; now cover over, and stir 3 or 4 times daily five 2 or 3 days; then put in a crumb of saleratus and stir it up, and if it foams put in more and stir, and add as long as it foams; the saleratus neutralizes any excess of acid; then put into a glass vessel and cork up tight. It improns by standing. Druggists keep this prepared.
19. WOOL-To Cleanse.--Make a liquid of water 3 parts and urine 1 part ; heat it as hot as you can bear the hand in it; then put in the wool, a little at a time, so as not to have it crowd; let it remain in for 15 minutes; take it out over a basket to drain, ther rinse in running water, and spread it out to dry; thus proceed in the same liquor; when it gets reduced fill it up, iu the same proportions, keeping it at hand heat, all the time, not using any soap.

EMIC -To , take oil of tuad, 2 ozs., cover over, hen put in a ams put in he saleratus glass vessel Druggists of water 3 an bear the time, so as nutes ; take aing wator, me liquor; roportions, iny soap.
D Insert s. In the brown rags lyer; to do
his, take, for every 5 lbs. black or brown rags, muriate of in $\frac{8}{4} \mathrm{lb}$., and the lac $\frac{1}{2} \mathrm{lb}$.; mixed with the same, as for tie lac red; dip the goods in this dye 2 hours, boiling $\frac{1}{2}$ of the time, if not red enough add more tin and lac. The gods can then be made a purple, by adding a little logwod ; be careful, and not get in but a very small handful, as nore can be added if not enough. White rags make a beatiful appearance in a carpet, by tying them in the skein and oloring them red, green, or purple; gray rags will take - very good green-the coloring will be in proportion to the
darkniss of mix.

## DURABLE COLORS ON COTTON.

1. B1AOK.-For 5 lbs. goods-sumac, wood and bark together, 3 lbs ; boil $\frac{1}{2}$ hour, and let the goods steep 12 hours; then dip in lime water $\frac{1}{2}$ hour; then take out the goods and let them drip an hour; now add to the sumas liquor, eoperas 8 ozs., and dip another hour; then run them throuph the tub of lime water again for 15 minutes; now make new dye with logwood $2 \frac{1}{2}$ lbs., by boiling 1 hour, and dh again 3 hours; now add bi-carbonate of potash 2 ozs., tothe logwood dye, and dip 1 hour. Wash in clear cold watr and dry in the shade. You may say this is doing too mach. You cannot get a permanent black on cotton with les labor.
2. SKY BLJE.-For 3 lbs. goods-blue vitriol 4 oza ; boil a few minues; then dip the goods 3 hours, after which; pass them through strong lime water. You can make this lation of prussiate of potash.
3. LIME WATER, AND STRONG LIME WATER. -For Coloring-Lime water is made by putting stone ter, slacking, stirring, and letting it stand until it becomes clear, then turn intoa tub of water, in which dip the goods. 4. BLUE, ON OPTTON OR LINEN-WITH LOGwood. - In all case, if new, they should be boiled in strong soap-suds or wiak ley and rinse clean; then for cotton Su lbs., or linen 3 lbs . take bi-carbonate of potash $\frac{9}{4} \mathrm{lb} . ;$ put He tle goods and dip hours, then take out, ringe; make a
dye with logwood 4 lbs ; dip in this 1 hoar, air, and 14 stand in the dye 3 or 4 hours, or till the dye is almost coll, wash out and dry.
4. BLUE ON COTTON-WITEOUT Loawood. - For 5 lbs . of rags-copperas 4 ozs. ; boil and dip 15 minues; then dip in strong suds, and bock to the dye 2 or 3 tines; then make a dye with prussiate of potash 1 oz . ; oil of ytriol 3 table-spoons; boil 30 minutes and rinse; then dry
5. GREEN.-If the cotton is new, boil in weakley or strong suds; then wash and dry; give the cotton a dip in the home-made blue dye tub until blue enough is otained to make the green as dark as required, take out, iry, and rinse the goods a little; then make a dje with fusio $\frac{9}{4} \mathrm{lb}$.; logwood 8 ozs. to each lb. of goods, by boiling he dye 1 hour; when cooled so as to hear the hand, put in te cotton, move briskly a few minutes, and let lay in 1 hour, take out and let it thoroughly drain; dissolve and add ti the dye, for each lb. of cotton, blue vitriol $\frac{1}{2}$ oz., and ip another hour; wring out and let dry in the shade. B adding or diminishing the logwood and fustic, any shade f green may. be oltained.
6. YELLOW.-For 5 lbs . of goods-suar of lead 7 ozs. ; dip the goods 2 hours; make a now dyp with bi-chromate of potasin 4 ozs. ; dip until the color siits, wring out and dry, if not yellow enough repeat thie oparation.
7. ORANGE.-For 5 lbs. goods-sugr of lead 4 ors.; boil a fow minutes, and when a little cool jut in the goods, dip 4 hours, wring out; make a new dye with bi-chromute of potash 8 ozs.; madder 2 ozs . ; dip untl it suits; if the color should be too red, take off a smal'sample and dip it into lime water, whan the choice can be taken of the samplo dipped in the lime or the original cobr.
8. RED.-I'ake muriate of tin $\frac{2}{3}$ of a teacup; add suffcient water to sover tha goods well, bing it to a boiling heat, putting is the goods 1 hour, stiring often; take out the goods and empty the kettle and put in olean water, with nic-wood 1 lb ., steeping it for $\frac{1}{2}$ hour, at hand heat; then put in tha goods and incrense thehent for 1 hour, not bringing to a boil at all; air the goodh, and dip an hour as before; wasb without soap.

Ir, air, and lat is almost coll, Jawood.- or p 15 minues; 2 or 3 tines; ; oil of ytriol hen dry
in weakley or otton a dip in th is otained out, (ry, and h fusic $\frac{8}{4} \mathrm{lb}$. ling he dye 1 in tee cotton, our; take out $t$ the dye, ip another B) adding or f green may
ar of lead 7 with bi-chrota, wring out tion.
flead 4 ozs.; in the goods, bi-chromute uits; if the le and dip it of the sam-
; add suffito a boiling en: take out lean water, hand heat; 1 hour, not an hour as
9. MURIATE OF TIN-Tin Liquor.-If druggists ksep it, it is best to purchase of them already made; but if Yu prefer, proceed as follows:

Get at a tinner's siop, block tin; put it in a shovel and mdt it. After it is melted, pour it from the height of 4 or 5 feet into a pail of clear water. The object of this is to have the tin in small particles, so that the acid can dissolve it. Take it out of the water and dry it; then put it into a stron glass bottle; pour over it muriatic acid 12 ozs. ; then slowly add sulphuric acid 8 ozs. The acid should be added about a table-spoon at a time, at intervals of 5 or 8 min utes, fir if you add it too rapiuly you run the risk of breakin the bottle byy. After you have all the acid in, let tie bottle stan and the ebulition subsides; then stop it n with a bees-waz or glass stopper, and set it away, and it will keep good for a year or more, or will be fit for use in 24 lours.

## COLORS ON SILK GOODS!

GREEN-Very Handsome with Oak Bark.-For 1 lb . of silk-yellow oak bark 8 ozs. ; boil it $\frac{1}{2}$ hour, tupn off the liquor frem the bark and add alum 6 ozs.; let stand until cold; while this dye is being made, color the goods in the blue dyetub, a light blue; dry and wash; then dip in the alum and bark dye; if it does not take well; warm the dye a little.
2. GREEN OR YELLOW-ON Silk or Woon, in Five to Fiftein Minutes.- For 5 lbs. of goods-black oak bark or peach eaves $\frac{1}{2}$ peck; boil well; then take out the bark or leaves, ind add muriate of tin $\frac{1}{2}$ tea-cup, stir. ring well; then put $n$ the goods and stir them round, and it will dye a deep yelow in from 5 to 15 minutes, according to the strength of the bark; take out the goods, rinse and dry immediately.
N. B.-For a green, add to the above dye, extract of indigo, or ohemic 1 tabe-spoon only, at a time, and work the goods' 5 minutes, an air; if not sufficiently dark use the same amount of chemia ar beforc, ana worik again until it suits.
3. MULBERRY,-Fo1 1 lb . of silk-alum 4 ozs ; dip 1
hour; wash out, and make a dye with Bravil wood 1 or, and logwood $\frac{4}{4}$ oz. by boiling together; dip in this $\frac{1}{2}$ hour, then add more Brazil wood and logwood, in equal proportions, until the color is dark enough.
: 4. BLACK.-Make a weak dye as you would for back on woollens, work the goods in bi-chromate of potash, at a little below boili g heat, then dip in the logwood in the same way; if colored in the blue vitriol dye; use abort the mame heat.
5. SPOTS-To Remove and Previent when colioring Black on Silk or Woollen.-N.B. In dyeing silk or woolien goods, if they should become rusty or spitted, all that is necessary is to make a weak lye, and have i/ soalding hot, and put your. goods in for fifteen minutes; or throw some ashes into your dye, and run your goods in it 5 minutes, and they will come out a jet black, add an even color. I will warrant it.-Storms.

The reason that spots of brown, or rust, as is is generally called, appear on black cloths, is that these parts take the solor faster than the other pasts; but I haveno doubt Mr. Storms' plan will remove them, for he regetted much to make publio the information, wtuioh he saysis not generally known. And if the precaution, given in our leading re marks on coloring, are heeded, there will je but very little danger of spotting at all.
6. LIGHT OHEMIC BLUE.-Foremd water 1 gal., dissolve alum $\frac{1}{2}$ table-spoon, in hot water 1 teacup, and add to it; then add chemic 1 teaspoon at a time, to obtain the desired color,-the more ohemic that is used, the darker will be the oolor.
7. FURPLE.-For 1 lb . of silk-having first obtained a light bloe by dipping in the bome-nade blue dye-tuh, and dried, dip in aixm 4 ozs., to sufficient water to cover, when a little warm ; if the color is not fall enough, add a little chemic.
6. YOLLOW.-For 1 lb . of sit-alum 3 ozs. ; sugar of lead $\frac{8}{4}$ oz. ; immerse the goods in the solution $\rho$ ver night; taks out, drain, and make a new dye with fustio 1 lb ; dip until the required color is obtaired.
in. B. The yeilow or green, for wool, works equally well of silk.

## COLORING DEPARTILENTA

351
9. ORANGE.-Take anotta and soda, and add in equal quantities, according to the amount of goods and darkness of the color wanted: say 1 oz . of each, to each pound of silk, and repeat as desired.
10. ORIMSON.-For 1 lb . of silk-alum 3 ozs ; dip at hand-heat 1 hour; take out and drain, while making a new ley, by boiling 10 minutes, cochineal 3 ozs. ; bruized nut-galls 2 ozs.; and cream of tartar $\frac{1}{4}$ oz., in one pail of water; when a little cool, begin to dip, raising the heat to a boil, oontinuing to dip 1 hour.
11. OINNAMON OR BROWN ON COTTON AND SII.K.-By a New Process-Viery Beavtiful-Givo the goods as munh color, from a solution, of blue vitriol 2 ozs., to water gallon, as it will take up in dipping 15 minutes; then run it through lime-water; this will make a beautiful al r-blue, of mueh durability; it has now to be run through salytivn ce Prussiate of potyhh 1 oz ., to water 1 gal
arts take the 10 doubt Mr. ted much to not generally leading re at very little water 1 gal ., up, and add obtain the the darker
st obtained lye-tuh, and cover, when add a little
3. ; sugar of pver night; 1 lb. ; dip
qually well

## TABLES AND EXPLANATIONS OF INTEREST.

## 

 different States; Also, showing what rates may BE CCNTRACTED FOR, AND OOLLEOTED; AND GIVING THE Forpeitureis when Illegal rates are Attempted to Be collected.-Finst, then, Six per cent is the Legal yate in the States of Maine, New Hampshire, Rhode Island, Connectiont, Vermont, Delaware, Maryland, Pennsylvania, Virginia, North Carolina, Florida, (Eight per cent.iṣallowed in this State if agreed upon), Mississippi, Tennessee, ArKansas, Kentucky, Ohio, Indiana, Illinois, Missouri, Iowa, and New Jersey, excepting in Hudson and Essex Counties, and the city of Patterson ; in this last State Seven per cent. is allowed, when eithcr of the parties reside therein. 8EOOND : Seven per cent. is the Legal rate in Michigan, New York, Minnesota Wisconsin, South Carolina and Georgia.Third : Ten per cent, is tho Legal rate in Caliornia; Eight per cent. in Alabams and Texas, and as strange as it may appear, in Louisiana only Five per cent.

Maine and Vermont allow no higher than legal interest to be collected, even if agreed upon. And if paid it can be recovered again, but no forfeiture.

In New Hampshire, three times the legal rate is forfeited, if unlawfully taken.

Rhode Island has no forfeiture, bat allows legal interest to be collected, even on usurious jontracts.

In Connecticnt, if usurious contracts are made, the principal only can be collected, to the lender, or, if collected, can bo recovered, one-half to the informer, the other half to the State Treasury.

New York voids usurious contracts; but, if paid, only allows the excess over legal rates to be collected back.

New Jersey, also, voids usurious contracts, reserving half to the State, and half to the informer.

Pennsylvania allows only legal interest to be collected.

## 

Delaware allows usurious contracts to be colleoted, half to the State and haif to the prosecutor. Maryland allows only legal rates to be collected.
Virginia voids tho contract, and coubles the debt, half to the informer and half to the State.
North Carolina is the same as Virginia.
South Carolina, Florida, and Alabama, allow forfcitures of only the intersis.

In Miscissippi, although six per cent. is the legal interest in common debts, yet for money, actually borrowed, sight per cent. is allowed, and alihough a rate may be yreed upon abovo what the law allows, simple interest may still be collcoted.

Louisiana, although allowing only five per cent. where no stipulation is made, permits eight per cent. in agreements and Bank interest to be siz per cent.
In Toxas, although eight per cent. only is the legal rate, get twelve may be contracted for, but if higher rates are agreed upon, none can be collected.
Arkansas allows as $h>$ as ten per cent. on contract, but voids usurious contracts

Tennessce allows a fine to be collected, net less in amount than is unlawfully taken.

Kentacky only voids usurious excesses.
Michigan allows ten per cent. to be contracted for, and voids only excesses, if any are taken.

Indiana allows only her legal rates to be contracted for and may be collected back, if, in any ease, it should be obtainct.

Illinois allows ten per cent. on money actually borrowed, and culy lawful rates can be collected.
In Missouri ten per cent. may be contracted for, but forfeits ten per cent. to the common school fund, in cases where more than lawful rates are obtaincd.
Iowa permits ten per cent. to be agrced upon, and allews all illegal interest to be collected back.

## 854

 DR. CHABE's LOIPras.Wisoonsin formerly permittod twelve per oent. to be agreed upon, and those who paid more than lawful ratos might recover back three times the amount paid; but more receatly allows only seven per cent., and makes all above that amount usurious.
California and Minnesota allow any rate agreed upon to be collected.
The interest which the State allows to be collectod on notes drawn, "with use," not "specifying the rato, is oalled legal, and that whioh some States allow to be contraotod for above the legal rate is lawful; bnt when a largor rate is taken, or agreed upon, it is called usurions, and subjects the person agreeing for it, or receiving it, to the penaltiés, or forfeitures, as given in the foregoing explanations.
Any Agent, or other person, who may know of any changes in their States from these rules, will confer a favor on the Author by enumuninating the samo.

## EXPLANATIOMS OF THE INTEREST TABLEB.

## EXAMPLE:

Desired to obtain the interest on $\$ 1,111: 00$, for 1 year, 4 months, and 27 days, at 6 per cent.

Turning to the tables you will see that the time is given in the left-hand column, the amounts on which you desire to find the interest are given at the heads of the various right-hand columns, the sum sought is found at the meeting of the lines to the right of the time, and down from the amount, as follows :

Whole sum of interest sought
. 893.88
In the same manner, proceed with any other amounts, or any other time, or rate per cent.; and if for more than one year, multiply the interest for 1 year by the number of years for whick the interest is sought; if for twenty, thirty, sisty, or any other amount between ten and one hundred dollars, multiply the interest on ten dollars, by the number of tens in the amount, which gives you the whole sum of interest sought; the same rule holds good on hundreds, between one hundred and one thousand, and, also, on thousands.
To find interest at 5 per cent., take ono-half of the 111 per cent. rate.

And, of course, the principle works the mame on all of the tablea, for the different ratew of per cont.

## EXPLANATION OF TECHNICAL TERMS

## FOUND IN MEDICAl. WORES.

Abdomen:-The lower front part of the body.
Aromatic.-Spicy and fragrant drugs; used to
 traliza acids.
Antacid.-Medicines which neutralize acids.
Anti.-Being prefixed to any word signifies against.
Antiscorbutic.-Alteratives for Serofula; blood purifiers. Antisyphilitic.-Remedy for Venereal discases.
Allus.-White, herce whites; fluor albus.
AntisiaZagogue.- Remedy for Salivation.
Antiseptic.- That which will prevent putrefaction.
Antichlogistic.-Remedy for fever and inflammation.
Antispasmodic.-Remedy for spasms, cramps, or convul. sions.
Anodyne.-A medicine which will allay pair, and produco slcepiness.
Alteraive.-Medicines which will gradually restore health $h_{j}$ Astringent. -Medicines which sonsfringe, draw up surfaces with which they come in contact; used in Flooding, Diarrlea, Whites, \&o. Abscess.- $A$ cavity containing pus. Anemia.-Without blcod, more properly blood without its proportion of iron, which gives it the bright Alvine.-Relating to the intestines. Aliment.-Any kind of food.
Alimentary Camal.- The entire passage through the whole intestines from mouth to anus; the passago for the aliment.
Alloumen.-An element found ble substanoes, constitutin animal and vegetathe white of eggs. Antimonial.-Medioines containing antimony.

Anus.-The external opening of the rectum, lower intestiss Antiperiodic.-That which cures periodio diseases, as Ague, Intermittent Fevers.
Antidote.-An opporing medicine, used chiefly agaice: poison.
Adult.-A person of full growth. Aqua.--Water.
Aqua Ammonia.-Water of Ammonia.
Amenorrhea.-Absence of the menses.
Antiemeici.-That which will stop vomiting; against emesis.
Arsenic.-A metal, the oxide of which is arsenious acid, 4bon commonly called ratsbane.
Abortion.-A premature birth or miscarriage.
Abortives. - That which will cause abortion.
Abrasion.-Bruising the skin.
Acetate.-A sult prepared with acetic acid Acrid.-Irritating, biting.
Adhesive.-Applied to sticking plasters, and to parts adhering from inflammations.
Balm.-Aromatic and fragrant medicino, usually an ointment.
Balsam.-Resinous substances, possessing healing properties. Basilicon.-An ointment containing wax, rosin, \&u1.
Belladonna.-Nightshade.
Rergamot.-Perfume made from the lemon peel.
Bile.-A secretion from the liver.
Bilious.-An undue amount of bile.
Bi-tarirate of Potash.-Cream of tartar.
Blanch.-To whiten.
Bowels.-Intestines.
Bolus.-A large pill.
Bronchia.-Branches of the windpipe.
Bronchitis.-Inflammation of the bronchial tubes, which lead into the lungs.
Bronchocele.-Enlargement of the thyroid gland, enlarged neck.
Butyric Acid.-An agid obtained from butter.
Calcium. - The metalic basis of lime, (see fluor spar.)
Calimus.-Sweet filag.
Calcurcous.-A substance containing ohalk or lime.

Calcined.-Burned so as to be easily reduced to powder. Calculus.-Stone or gravel found in the bladder, gall ducts, kidneys and ureters; ducts which lead from the kidneys to the bladder.
Callous.-A hard bony substance or growth.
Capsicum.- Cayenne pepper.
Catarrh.- Flow of mucus.
Cathartic.-An active purgative.
Catheter.-T.ube for emptying the bladder.
Carminative.-An aromatio medioine.
Caustic.-A corroding or destroying substance, as nitrate of silver, potash, \&c.
Citric Acid.-Acid made from lemons.
Chronic.-Of long standing.
Collapse.-A recession of the blood from the surface.
Comia.-Stupor.
Constipation-Costiveness.
Contagious.-A disease which may be given to another by contact.
Counte."-To work against, as counter-irritant, Spanish flics, draughts to the feet, \&o.
Congestion.-Accumulation of blood in a part, unduly. Convalescence.-Improvement in health.
Cuticle.-The outer or first portion of the skin, which consists of three coats.
Datura Stramonium.-Stink-weed, jimpson, \&o.
Diaphoretics. - Medicines which aid or produce perspiration. Decoction.-To prepare by boiling.
Dentrifice. - A preparation to cleanse the teeth. Defecution.-To pass the foeces, to go to stool. Dentition.-Act or process of cutting teeth. Desiccation. - To dry, act of drying.
Dernulcent.-Mucilaginous, as flax-seed and gum arabic.
Dermuid.-Resembling, or relating to the skin.
Detergents.-Cleansing medicines, as laxatives and purgan tives.
Viagnosis.-To discriminate disease. Diaphragm.-Midriff. Diarrhoea.-Looscnese of the bowels. Digest.-Assimilation or conversion of food into chyme-to prepare medicines with continued, gentle heat.

Discutient.-A medicine which will soatter or driv: away tumors.
Diuretic.-That which increases the amount of urine.
Diluted.-Reduced with water, as dilute alcohol, half aloohol and half water.
Dinitalis.--Fox glove, a narcotic.
Dr*sal.-Having reference to the back.
Douche.-A dash, or strenta upon any part.
Drachm.-Sinty grains, a teaspoonful, or a teaspoon of.
Duhurmara.-...Tha lister-syoet or woody nightshade.
Dyspepsia.-Diftome cijgstion.
Dysphonio.--Difficulty in epeaking.
Dysuria.-nificult or inful urination:
Biau.-Water.
Eicu de Cobogne-Cologne water.
Ebulition.--To boil.
Eclectic.-To choose.
Eclectic $P h_{y}$ sician.-One who professes to be liberal in views, independent of party, and who favors progress and reform in medicine.
Fiffervesce.-To foam.
$Z_{2}$ गovescence. - Redness of the general surface.
Effes-Worn out, waste matter.
Elaterium.-Fruit of the wild cucumber, a hydragogue.
Electuary.-Medicine prepared at the consistence of honey. Wlixir.-A tincture prepared with more than one article. Smesis-Tio act of vomiting.
Imetic.-Medicines which produce emesis, vomiting.
Emmenagogue.-A medicine which will aid to bring on the
Emolients.-Softening and screening medicines, slippery-: elm bark, flax-seed, gums, \&o.
Emulsion.-Mucilage from the emolients.
Enema.-An injection by the rectum.
Ennui.-Lassitude, dullness of spirit, disgust of condition, \&o.
Epi.-Above or over.
Epidermis.-Outer skin.
Epigastrium.-Region of ti, it of the stomach.
Epilepsy.-Convulsion fits, with loss of sense for the tir2., foaming at the mouth, and stupor.

Emiglottis.-Trap-door oartilage at the root of the tongue, preventing food, or fluid, from entering the
wind-pipe.
Enistaxis.-Nose bleed.
Eigot.-Spurred rye.
Eructation.-Raising wind from the stomach, belching.
Emuption.-Pimples or blotches on the skin, or pustulen from small-pox.
Eschar.-A slough on the surface.
Escharotic.-That which will destroy the flesh.
Essential.-Having reference to essences made from essen-
tial oils, and aleohol.
Ether.-A volatile fluid.
Etherial Oil.-Volatile oil.
Eustachian Tube.-A tube leading from the side of the
Eversion throat to the internal ear.
Evacuation.-To discharge by stool, to haste-away. the remarks in the body of the work on "Cos-

Exacerbation.-Violent increase in disease.
Exanthemata.-Eruptive disease, as small-pox, scarlet fever, measles, \&e.
Excrement.-The fooces, that which passes by stool. Excretion.-That which is thrown off, become useless. Excoriation.- Abrasion, to bruise the skin.
Exhalents.-Vessels which throw out fluid upon the external or internal surface of the body.
Expectorants.-That which produces or aids a disoharge of muous from the bronchial tubes, or from the lungs.
Excision.-To out off an extremity.
Extremity.-Applied to the arms and legs, cailed upper and lower extremities. Extirpation.-To out out, or to remove a part.
Exetract. -To take out, as a tooth, to extract a ball or any foreign substance from a wound-an active principle obtained from vegetables.
Exprese-Te prene out juicos.
warercapmce - An unnatural growth.

## DR. OHASE'S REOIPEGS.

Extravasation.-A collection of blood into a cavity, or mider the skin.
Facial.-Belonging to, or having reference to the face. Farina.-Meal, or flour, from vegetables.
Farcy.-A disease of the lymphatic vessels in the skin of the flanks of a horse.
Fauces.-The pharynx and back part of the mouth. Fascicular:- A bundle, in bundles.
Feces.-That which passes by stool.
Febrile.-Having reference to fevers.
Febrifuge.-Medicines to drive away fever, producing porspiration.
Felon.-A deep abscess of the finger, involving tho bono, because under the periosteum, the mombrane Femur.-The thigh bone.
Femoral.-Relating to the thigh.
Ferment.-To oxodize, to effervesce, to work, as emptyings, Fruntatioer, wine, cider, \&o.
Fermentation.-To sour, to decompose, both heat and moisture being necessary to keep it up.
Ferri Limatura. - Iron filings, very valuable in female debility, and for males of a weak habit of body. Ferrum.-Iron.
Frever.-That which "Old School Physicians"' call a disease, whilst another class (the Thomsonians) say it is an effort of nature to throw off disease; but
i. Eclectics take it as an indication that the cirouonce to equalize tho cireulation, iby the use of diaphoretics, combined with tonics and detor-, gents, which soon sets all to rights; for fever and perspiration cannot long exist together. Filter-To strain through paper made for that purpose. Fibre.-A very small, thread-like substance of animal or vegetable matter.
Fibula.- The smallest bone of the leg below the knee.
Fistula.-An alcer.
Flaccid.-Flabby, soft, relayed. Flabby.-Loose and soft to the touch. Watus, -To inflate the stomach or bowels
a cavity, or the face. the skin of uth
ducing perg tho bono, membrane
emptyinga, ; and mois. female de; of body.
a diseaso, s) say it ease; but the circuo work at he use of nd detorfor fevor ther. rpose. simal or

F'uoric Acid.-A fluid obtained from the fluor spar out

Flooding.-Uterine hemorrhage.
Fluor.-An increased diseharge, to flow.
Fluor Spar.-Fluoride of calcium.
Fluor Allus.- White flow, lucorrhea, whites, \&ro.
Flux.-To flow, diarrhea.
Friction.-Rubbing with the dry hand, or dry coarse oloth. Fumigate.-To smoke a room, or any artiole needing to be cleansed.

## Fundament.-The anus.

- Formula.-Medical prescription.

Fulminating Powder:-An cxplosive preparation, used in fireworks.
Function.-The particular action of an organ, as the func-
Fungus.-Spungy flesh in wounds; proud-flesh, a soft cancer, which bleeds upon touehing its broken surface. Fusion.-To fuse, to melt.
Furor.-Very violent delirium, not accompanied by fever. Galbanum.-A resinous gum, from a genus of plants. Genus.-Family of plants, a group, all of a class, or nature. Gall.-Bile.
Gall Bladder.-A bag which receives the gall, or bile, through ducts, from the liver, delivering it to the stomacin, in health, through the duct called communis choledochus.
Gall Stones.-Hard biliary concretions found in the gall bladder, and sometimes causing death, from not being able to pass through the ductus communis.
Galla.-The gall nut, an exerescence found upon the aak. Gallic Acid.-An acid from the nut-gull.
Galipot.-A glazed jar, usid or putting upgummy extracts. Galvanic.-Having refurese to galvanism.
Gamboge.-A drastic purgative, unless combined with aromatics.
Gangrcize.-Partiai death of a part, often ending in entire mortifisatior of the part, and sometimes of the whole boidy.

Ganglion.-A knot, or lump on tendons, 'Igaments, or nerves.
Gaseous.-Having thrs nature of gas.
Gastric.--Cf, or belonging to the stomach.
Gastric Juice.-Secretion of the stomach.
Gastritis.-Inflammation of the stomach.
Gastrodynia.-Pain in the stomach, sometimes with spasms of the stomach.
Gelatinc.-Isinglass.
Gelatinons.-Like jelly.
Genitals.-Belonging to generation, the sexual organs.
Gentian.-AnEuropean root, possessing tonic properties.
Genu. -The knee.
Genuflexion.-Bending the knee, kneelins.
Germ.-The vital principle, or life-spark.
Gestation.-To be pregnant.-
Gland.-Seoreting organs having duots emptying ints eavities, which often become obstructen, causing them to enlarge; hence, the enlargement of the thyroid gland in the ueck, causing bronchocele.
Glans.-A gland.
Gleet.-Chronic gonorrhea.
Globules.-Small round particles, having spacial roference to particles of the red riat or the blood.
Glossa. -The tongue, a sraooth tongue.
Gloss.-To give lustre ; to oomment; to write or make explanations.
Glossarist.-A writer of ploanes or comments.
Glossary.-An explanation of words.
Glossarial.-Containing explanations.
Glossitis.-Inflammation of the tong
Glottis.-The opening into the wind- $a^{4}$ the root of the tongue, larynx, covered $b$ the, iglotis.
Shuters. - Coagulable lymph, white of an egy, a principle in wheat and other vegctables.
Glaston.-One who eats excessively.
Gonorrhea.-An infectious discharge from the genital organs.
Gout. - Painful inflammation of the joints of the toes, or of the fingers.
Gramule.-A mall particle of healthy matter, not pus. valuable to those who cannot or will not take excrcise for the sake of dollars and cents. excrcise for the sake of commonly called plaster of. Paris, because first introduced from that place.
ng into cavicel, causing ment of the bronchocele.
roference to d.
or make cx-
root of the lottis. principle in
genital ore toes, or of not pus. dor or bad habit, constitutionally, or prejudieially predisposed to do some partioular thing ; medi-
Hema,-B cat as consumptive habit, rheumatio habit, \&o. Henatemesis prefixed to other words.
Hrmaturis.-Hen rhage from the stomach. Memonia,-Memoriage from the bladder.
II moptyris.-Homorrhage from the lungs.
Itemoirturds.-Piles, bleeding pilea
Uenbane.- Hyoseyamus.
Herelitury, - Disease from parents.
Herniu,-1lupture, which permits a part of the bowel to Herpen,-Disoase of the skin.
Hiera Picra,-A medioine containing aloes.
Humerus.-The single bone of the upper arm.
Humeral.-Portaining to the arm.
Humors, -The fluids of the body, excluding the blood.
Hydragngues.-Medicines which produce watery discharges, used in dropsy, as elaterium.
Hydrargyrum.-Metallic mercury, quicksilver, Dooters' name for calomel.
Hydrocyanic Acid.-Prussic acid, nothing more poisonous. Hydrofluoric Amd, Same ixs fuoric auiui. Hygea.- ITealth.
aygione--Proserving health by diet and otber precau-
tinons. to the sufferers than to their friends, who are constantly boring them about it; called hysteries in woman, (from hysteria, the womb or uterus,) but blues only, when it gets hold of men; they come from the same cause, general debility ; takes a strong remedy, iron, as medicine. Hypoglottis.-Under the tongue.
Hysteria.-The uterus, (womb,) also disease, depending upon, or caused by uterine irregularities.
Hysteritis.-Inflammation of the uterus.
Ichor.-An acrid, biting watery discharge from ulcers, often corroding, eating the surfaee.
Icterus.-Jaundice, a bilious disease whieh shows itself by yellowness of the cyes and skin.
Icterus Albus.-Chlorosis, Whites, \&c.
Ignition.- To eatch on fire, from Ignis, fire.
lleus.-Colio in the small intestines
lliac.-Situated near the flank.
Iliac Region.-Sides of the abdonsen, between the ribs and the thighs.
Imbecile.-One of weak mind, imbecility.
Imbibe.-To absorb, to drink.
Imbricate.-To over-lap, as tiles on a house.
Immerse.-To plunge under water.
Immobile.-Immovable, as stiff joints.
Imperforate.-Without a natural opening.
Impervious.-Closod against water.
Impetigo.-Tetter.
Imponderable.-Not having weight, light or elasticity.
Impoverished.-Exhausted vitality.
Impotence.-Sterility, not being able to produce.
Impregnation. - The act of producing.
Incision.-To cut.
Incombustible.-Incapable of being burned.
Incompatibles.-Medicines which ought not to be mixed, or given together.
Inconsistence.-Not being able to hold the nat ural excretions.
Incorporate.- To mix medicines together.
Incubation.-To hatch cggs, slow developmr at of disease.
Wodication.-That which shows what ougbl to be done.
ro annoying ds, who are ed hysteries or uterus,) men ; they al debility; icine.
depending rities.
loers, often rs itself by

## GLOSBARLAL DEPARTMENT.

## Indigenous.-Peculiarity of a country or

 of country, applied to dis, or of a small section Indigestion.-Dyspepsia. Indolent.-Slow in proo which are slows, applied to uleers and tumors, Induration.-Hardening of and with but littlo or no pain. oisc. Infectious.-Communieable disease, from one to another. lifirmury. - Where medicines are distributed gratuitously to the poor; but more reeently some physicians have got to calling their offices infirmaries. Inflammation.-Attended with heat, redncss, swelling, ten-Infatus.- derness, and often with throbbing. with and, to blow up with wind, or to fill up Influenza.-A disos, as the stomach, bowels, \&e. a catarrhal naturg the nostrils, throat, \&c., of Infusion.-Medieines prepared byInquinal.- In the groin. Ingredient One grin.
arcaient. - One article of a compound misture. Inhalation.-To draw in the breath.
Injection.-Any preparation to be introduced by the rectum Inorganic.-Matter not having organs, all alike, as metals. Insanity.-Derangement of the mind.
Insertion.-The attachment of muscles and tendons to the bones, which they move by eontraction. Inspiration.-The act of drawing in the breath.
Insipissation.-To thicken by boiling, to make what is called the concentrated extracts, desiccation.
Instinct.-An involuntary action, as ciosing the eyelids breathing, \&e., natural perception of animals. Integument. - A covering, the skin. Inter.-A prefix denoting between. Intercostal. - Between the ribs.
Intermission.-Time between paroxgsms of fever, or othen Intermittent $\begin{aligned} & \text { disease } \\ & \text { ever. Fever which comes on at regular peri- }\end{aligned}$ ods, between which periods there is little, and sometimes no fever, an interval.
Internal.-Upon the inside. Interossens.-Between the bones.

Interval.-The period between the paroxysms of periodical discases, as ague, \&o.
Intestines - The contents of the abdomen.
Intestinal Canal.--Embracing the deodenum (the first division below the stomach,) the jejunum (the second division of the small intestines, ) the ileum, (the third and longest portion of the small intestines,) the secum, (the first portion of the large intestines,) the colon, (the large intestine,) and the rectum, (the lower trap-door.)
Iniolerance.-In medicine, applied to the eye, as intolerance of light; to the stomach, as intolerance of food.
Inversio Uteri--Inversion of the uterus.
Inversion.-To tarn the inside out.
Irreducible.-Applied to hernia, and to joints which have been put out and eannot be put back to their place.
Ischuria.-Not being able to pass the urine.
Issue.-Sore mado as a counter-irritant, to draw irritation from a diseased part.
Itch.-Psora, scabies, a catching eruption of the skin.
Tis.-An addition to a word denoting inflammation, as pleuritis, pleurisy, \&c.
Ivory Black.-Animal charcoal.
Jaundice.-A cisease caused by the inaetivity of the liver, or ducts leading from it. [Sec Icterus.]
Jelly.-Gelatine in a fluid state, as applied to medicine.
Jesuits' Barls.-First name of Pcruvian bark, from its having been discovered by Jesuit missionaries.
Juglar.-Applied to veins of the throat.
Jujube.--An East India fruit, something like a plum, used in coughs, but of doubtful reputation.
Kali.-Potash.
Kelp.-Ashes of sei-weed.
Knot.-Surgeons tie their knot by passing the thread twioe through the loop, which prevents slipping.
Labia.-Lips.
Labia Pudendi.-Lips, or sides of the vulva
Labial.-Of, or bolonging to the lips。
Labor.-Ohild-hirth, partarition.
the first diejunum (the estines,) the rtion of the ast portion of 0 large intes-rap-door.) s intolerance tolerance of
which have ack to their

Laboratory. - A place of chemi al cexpariments, or operations. Lancinating.-Sharp, piercing, as lancinating pain. Laryngea .- Of the larynx.
Larynx. - The upper part of the throat. Laryngris.- Inflammation of the throat. Latene.-Hidden, as latent heat, sce the remarks conneoted with steam boiler explosion.
Liassitude.-Weakness, a feeling of stupor.
lasentive.-A very gentle cathartic.
Keptandrin.-Powder made from the leptandria virginiea. blackroot, Culver's physic.
Leucorrhea.-Fluor albus, whites, chlorosis, \&c.
Levigate. - To reduce to a very fine powder.
Ligoture.-A thread, to ligate, to tie with a ligature.
Located.-Fized, seated upon the same organ.
Lingua.-The tongue.
Linguist.-A spaaker, fluenoy, one who understands different languagcs.
Liniment.-A fluid preparation to be applied by friction. Lithontriptic.-A medicine reported to dissolve gravel, or Lithotomy. - The operation of cutting, to take out stone of the bladder.
Liver.-The largest gland, and largest orgian of the body. Livid.-A dark colored spot on the surface.
Loins.-Lower part of the back.
Lotion.-A preparation to wash a sore.
Lubricate. -To soften with oil, or to moisten with a fluid.
The internal organs are covered with a mem. brane which throws out a lubricating fluid, en. Lute.-A abling them to move easily upon each other. casein, curd of to close chemical retorts, the Lymph. - A thin, colorless fluid, is used for that purpuso. vesseis called lynuphatics.
Macerate. - To steep $p_{2}$ softon by soaking.
īalu.-Bad, mal practice, bad practice, not actording to science.
Malformation. - Irregular, unnatural formation.
Malaria.-Bad gases, causing discase, supposed to ariso from decaying vegetable matter.

Malignant.-A pestilential, and generally dangerons dis
Mamma.-The female breast, whioh is composed of glands that secrete the mills, upon the principle that the liver sceretes biie; each organ for its speoific purpose ; but secreting organs, or glands, are the more liable to get obstructed, thus producing disease.
Mastication. - The act of chewing.
Masturbation. - Excitement, by the hand, of the genital organs. The most injurious, health-destroying, soul-debasing, of all evils introduced into the world, because its frequent repetition draws very heavily upon the neryous system, prostrating the energies, destroying the memory, together with the life principle, as well as the prinoiples of morality which ought to govern every humgn being, between himself and his Creator.
Maturity. - To become ripe, to arrive at adult age, beyond further growth.
Materia. - Matter, hcalthy substance.
Materia Medica.-The science of medioine and medical combinations.
Maturation.- Formation of pus, unhealthy matter.
Matrix. -The womb.
Meconium:- The first passages after birth.
Medical.-Relating to mediclue.
Medicated.-Having medicine in its preparation.
Membrane.-A thin lining, or covering, skin-like, as the peritoncum, which lines the cavity of the bowels and covers the intestines; and the periosteum membrane, which oovers the bones, \&o.
Medicament. $-\Lambda$ remedy, hence, medicamentum, the Welsh remedy for every disense.
Mcdicinal.- Having medical properties
Medullary,-Like marrow, brain-like. Mel, - Honey.
Menstruation.-Monthly flow.
MTentla Piperita. - Peppermint.
Median.-The middle.

Mellifuous.-Flowing with honey, sweetness, delicous; akin to lueious, juioy mellowness.
Menorrhagia.-Excossive flooding.
Micturition,-To urinate, to pass the urine.
Midwifery.-Art of assisting at child-birth.
Minim.-About one drop, one-sixtieth of a fluid drachm.
Minimum.-The smallest, the smallest dose, the opposite of maximum.
Modus Operandi.-The way in winich medicines act, applicable also to any action, the way of doing it. Morbid.—Unhealthy.
Morbus.-A disease; hence, clolerera morbus, disease of the bowels.
Mordant. - That which fastens the colors in dyeing, as alum, cream of tartar, argul, vitriols, tin, liquor, \&c. Mucus.-Animal mucilage.
Mucus Membrane.-See remarks under the head of "Inflammation," in the body of the work.
Mucilage. - A watery solution of gum, or elm bark, \&o.
Muriatic.- Having reforence to sea salt.
Muriatic Acid.-MIarine acid, often eallod hydrochloric acid. Muscle.-A bundlo of fibres.
Muscular.-Having reference to the muscles, strong built. Myrrh.-A resinous gum.
Narcotic.- Stupefying mori ines, producing sleep.
Nares. - The nostrils.
Nasal.-Of tho nose.
Neusea.-Sicknoss of tho stomach, may increase until rom iting takes place, or it may not
Nauseént. - That which producos nausea.
Ncuel.-Contre of the abdomen.
Necros.-Death.
Necrosis.-Death of a bone.
Nephros.-The kiducy.
Nephritis.-Inflamuation of the kidney or kidneys.
Nervous.-Ersily excited.
Nervine.-That which will allay, or soothe nervous excito. ment.
Neuralgia. - Pain in nerves.
Nitre.-Saltpetre.
Nocturnal,--Oocurring in tho night.

Nitratc.-Nitric acid combined with alkaiies or alkaline sults.
Normul.- In a natural and healthy cordition.
Nostrum.- A medical preparation.
Nothus.-Spurious, illogitimate, a bastard.
Nudus.-Nude, without clothing.
Nutrition.-Nourishment.
Nutritious.-Nourishing.
Obesity-Corpulence, excess of fat, ßeshy.
Obstetrics. - The scionce of midwifery.
Ochre.-An ore of iron.
Oculus.-r he eye.
Oculist.-An eye-doctor.
Oleaginous.-An oily substance.
Omentum:- The caul, peritoncal covering of the intestincs.
Opacity. - To obstruct light,
Oprque.-Not transparent, inasuity to see through.
Opthalmos. - The ejc.
Ophalmos. - The eje.
Opthalmia.-Disease of the eye, inflammation of the eye.
Opiute.-An anodyne.
Orgun.-A part of tho body, which has a certain work to perform, ealled the functions of organs, as the stomach, lungs, womb, \&e.
Organic. - Tiodies made up of organs.
Organism. - Vital organization.
Organized.-Furnished with life.
Orgusm.-The elosing excitement of sexual connection.
Origin.-The point of commencement.
Orifice,-An opening.
Os Tince.-Mouth of the womb, or uterus.
Osscous.-A bony substance.
Ossification.-T' become bone; from ost, or osteo, a bone, or like a bone.
Ostalgia.-Pain in a bone.
Osteoma.-Tumor, like bone.
Ostitis.-Tnflanmation of a bono, or bones.
Otic.- Having reference to the car.
Otitis.-Inflammation of tho car.
Otorrhea.-Discharge from the gar. $\hat{O} a,-$ An cgg made up of little eggs. male testes, two egg-shaped bodies (made up of little particles; or eggs); having an attachment to the hivrus in tho broad ligaments, which support that organ, having tubes, or ducts, opening from them into the uterus, called Fallopian tubes, from the man's namo who first gave a description of them. One of these particles is thrown off at each menstrual flow.
Oviparous.-Birds, or any animals that produce their young
Ovum.-An egg. (souring) prineiple, and the air, an acidifying Oxymel.-A preparation of vinegar and honey, from mel;
Ozena.-Fetid ulcer of the nose, or fetid discharge from the nose.
Pabutum.-Food; aliment.
Pad.-A cushion.
Palliative.-To afford relief, only.
Palpitation.-Unhealthy, or unnatural beating of the heart Pan.-As a prefix, means all.
Panarea.-Remedy for all diseases, consequently (speaking Pa ironically) any patent medicine. Partus -Loss of motion, dumis palsy.
Parturition - Chithe young when brought forth.
Paroxysm.-A fit of dise
Periodical.-Oceurring at ase occuring at certain periods.
Petal.-A flower loaf at a certain time.
Phthien A leaves, \&c.
Pathos A disease consumption.
Pathos.-A diseaso.
Pathology.-The doetrine of disease.

## DR. OHASE'S REOIPES.

Pectoral. - Pertaining to the breast.
Pedilivium.-A foot-bath.
Pendulous.-To hang down.
Penis.-The male organ of generation.
Pepsine.-A peculiar substance in the stomach, which aids digestion.
Peptic.-Digestive; henee, dyspeptie, not digesting.
Percolation.-To run, or draw through some substance, straining.
Premonitory.-To give a previous notice, as premonitory symptoms.
Pcri.-Around, a eovering.
Pericardium.-Around the heart, sae containing the heart. Pericarditis.-Inflammation of the pericardium.
Derin.-A testicle, male organs, corresponding with testes, in females, with this difference, however, that with males they are upon the outside, whilst with females they are upon the inside of the body.
Perineum.-'Mat part betreen the anus and organs of generation or genitals.
Perineal.-Relating to the region of the perincum. Period.-A certain time.
Periodicity.-Returning at a certain time.
Periosteum.--The membrane which covers all bones.
Perspective Viero.-As it appears to the eye at a certain distance.
Perturbation.-To disturb.
Perversion.-An unhealthy change; to change from its
Pessary.-Throper or natural course.
Pessary.-That whioh will support, or hold up the womb, in prolapsus; see our remarks on "Female" Phagedenic.-An eating and fast spreading ulcer.
Pharmacy.-The art of combining and preparing medicinos.
Phlegm.-Mueus from the bronchial tubes and throat. Phlogistic.-Tendency to inflammation.
Phosphorus.-An intlammable and luminous substance, Phosphate propared from urine and bones. phosphoric acid in combination with metals, as phosphate of iron, phosphate of lime, doe.

Piles.-Tumors at, or in the anus; sometimes protuding; often attended with hemorrhage, then called
Piperine.-A preparation from black pepper, considered valuable in ague.
Placenta.-After-birth, which has a connection to the womb, and to the child, during pregnancy; but is naturally thrown off by the violent contractions of the womb, at this period, there being no further use for it. Oh, the wisdor of our Oreator, how glorious to contemplate 1 Everything adapted to the necessicies of the caso.
Plethora.-Over fullness; if healthy, causing obesity, corpulance.
Pleutitis.-Inflammation of the pleura, pleurisy.
Pneumon.-The lungs.
Pleura.-The serous membrane covering the lungs, and folded upon the sides.
Pneumonia.-Inflammation of the lungs.
Podophillin.-A powder made from the podophillum peltatum, mandrake root.
Pemum.-The apple; hence, pomace, mashed apple.
Potasium.-The basis of potash.
Potus.-A drink; hence, potion, a medieated drink.
Predisposition.- A tendency to a certain diseaso.
Fregnancy.-Being with child.
Prognosis.-The art of guessing hew a disease will ter minate.
Prolapsus.-A falling.
Prolapsus Ani.-Falling of the aaus.
Prolapsus Uteri--Falling of thes uterus.
Prostration.-Without strength.
Prussiaic.-A compound with prussic acid.
Prussic Acid.-Hydrocyanio acid; one of, or the most virulent poisonin existence.
Psora.-The itth.
Pubes.-The prominence at the lower front part of the body.
Pubcrty-Full growth; an adult; perfection.
Pubic.-Having reference to the region of the pubes. child-birth.
Pulmo.-A lung.
Pulmonitis. - Inflammation of the lung or lungs.
Pulmonary.-Relating to the lungs, as pulmonary Balsam.
Pulvis.-A powder; hence, pulverize, womake finc. $1 \mathbf{1}$. upon other languages, for our own, consoquently, the necessity of studying the Latin
Pupil.-The and Greek, to properly understand ours.
Purgative.- $A$ genk circle in the eye.
Pus.-Unhealthy matter.
Pustule.-A slight elevation, having pus.
Putrefaction.- To decompose, by fermentation.
Putrid.-Motten; decomposed.
Py:oligneous Acid.-An acid obtained from wood; the essence of smoke; if a little of it is put into a barrel with meat, in the brine, it smokes it without trouble. I think a gill to the barrel iron tuke into a coal-pit, near th barrel or other buruing; it condenses in the bottom, when

Rev from the outer end into a dish the and drops for use.

Rhe Quassia.-A bitter tonic; the chips of the wood are used -
Ruckis.-The spine. Ruchitis.-Thickets, bending of Ruchitis.- Rickets, bending of the spine, and sometimes the long bones of the limbs; may be also enRigo Rocl liube the long bones.
Radius. - The bone of the upper arm,
Retutici. - Having reference to the upper arm.
Radiated.-Diverging from a centre.
Radix.-A root.
Ramus.-A branch.
tion,
it forth a ohild, t, or soon after
lungs. monary Balsam. nake fine. Al we have drawn tr own, consoing the Latin ind ours.

## n.

n wood; the is put into a it smokes it to the barrel ill do. It is arrel or other bottom, when je and drops then bottled
od are used sometimes $\checkmark$ be also enthe onds of

Ramification.-To branch out. Rancidity.-Rancid, stale; applied to oil, fat, butter, \&o. Rash.-A redness of the skin, in patches.
Ratsbane.-Arsenious acid; arsenie.
Rattle.-Noise of air passing through mucus, as in croup.
Reaction.-To return, after reeession.
Recession.-Striking in, the blood, or disease, going to the internal organs.
Rectum.-The lower portion of the intestines.
Reduction. -To set a fracture, or to return a hernia.
Refrigerant.-A cooling medicine, or drink.
Regimen.-Regulation of diet, and habits, to preserve hoalth, or to cure disease.
Relapse.-Recurrence of disease after an approved appearanoe, which is generally worse than the first attack.
Relaxation.-Losing the healthy tone of any part, or the whole system.
Repletion.-Fullness.
Reproduction. - Generation, precreation.
Respiration.-To breathe, ineluding both inspiration and expiration.
Resolution.-To return to health, applied to inflammations.
Retching.-An effort to vomit.
Retention.-Delay of the natural passage of the urine or foces.
Revulsion.-To draw away disease, as draughts, or blisters, irritating plasters, to.
Rhcumatism.-Inflammation of the fibrous tissue, mostly Recini Oleum. - Confined to the large joints.
higor.-Coldness, with shivering.
Rochelle Salts. - A mixture of tartarate of potash and soda.
Rubefucients.-Medicines which cause redness of the skin, as mustard, raddish leaves, \&e.
Rupture.-Hernia; by some, called a breonh,
Nuccharine.-Tho properties of sugar.
Saliva.-The seoretion of the mouth, spittle; henee, sai: vation, an increased flow of saliva.
Salt.-A compound of acid, with an alkali, or metal.
Saltpetre.-Nitrate of potash. ture.
Scabies.--The itch.
Scirrhus. - A hard tumor, generally of a cancerous nature.
Scrofula. - A constitutional tendency to disease of thic glands.
Scrotum. -The sac which encloses the testicles.
Sedative.-To depress, the opposite of stimulation.
Seidlitz.-A vilsce of Bohemia; hence, seidlitz powders, Sinapsis, Wlimh miginated at that piace. Slough.-Donthe : hence, sinapisms, mustard plasters. Stimulant. - A mealisy part. Styptic.-To and healthy action. Snake-Root.-Common or Virginia snake-root; but black Spasm.-Crame-root is the black cohosh. Specific-Cramp, or convulsion. health. Sperm.-Seminal fluid, now more often called the semen, seed.
Spina.-The back-bone reference to the testicles, or oparics. Stitch.-A spasmodio pain. Stoma.-The mouth. pain.
Stomatitis.-Inflammation of the mouth. Strangulation.-To choke; also applied to hernia which Sudor.-Sweat; hence, sudorific, to sweat. Sulphate.-A combination with sulpharic acid. Sulphatric Acid.-Oil of vitriol. Suppression.-An arrest of a naturai discharge.
Suppuration.-To produce pus.
tharge, as bloody
a-seed.
a cancerous na.
anecrous nature. diseaso of the cles.
rulation.
idlitz powders, tard plasters. ae out from the
an increased
ot; but blacts
n, producing
d the semen, or oparies.

Sympathy. - To be affeoted by the disease of another organ, as sick headache from overloading the stomach. Symptom.- -1 sign of disease.
Syncope.-To swoon, fainting.
Syphlitiv--Disease from sexual connection with those who havo venereal disease.
Tannio Acid.-An acid from oak bark, an astringent.
Tartaric Acid. - An acid from ercam of tartar, found in grapes.
Tenermus,-Difficulty and pain at stool, with a desire to go to stool often.
Tent.-A roll of lint or cloth to keep wourd sopen runtil Teates,-T'esticles.
Therapeutics,-Relating to a knowledge of treaining disease, the curative action of medicine.
Thorax. -The chest.
Tibia.-The large bone of the lower-leg.
Tonsils.-Glands on each side of the throat.
Trachea.-The windpipe.
Translution.- Discase going to some other organ.
Triturate, -To rub into a powder.
Tumor.-An enlargement of a portion, usually is $^{7}$ the $0 x$ ternal parts.
Ulna,-Small or under bone of the arm.
Uinbilicus,-The navel.
Uretur, -Duct leading from tha kidney to the bladder.

## APPENDIX.

## COOKERY DEPARTMENT. FISH.

Fish when fresh are hard when pressed by the finger-the gills red-the eyes full. If the flesh is tlabby and the eyes suuken, the fish are stale. They should be thorcughly oleaned, washed and sprinkled with salt.
Before broiling fish, rub the gridiron with a piece of fat, to prevent it stieking. Lay the skin side down first.
The eerthy taste often found in fresh-water fish can be remored by soaking in salt and water.
Most kiuds of salt fish should be snaked in cold water for 24 hours-the fleshy side turned down in the water.
Baked Fish.-Stuff it with plain dressing ; put in a pan with a little water; salt, pepper and butter. Baste while baking. A fish weighing four pounds will bake in an hour. Garnish with hard-boiled eggs and parsley, and serve with drawn butter or egg
sauce.
To Bone Fish.-Sew them in a cloth, and put in cold water, with plenty of salt. Most fish will boil in 30 minutes.
Proklina Fish. - Spice the vinegar us for cucumber ; put your fish in and let them boil slowly for a few minutes, until done, without breaking; then set them away for several weeks, and the bones will be entirely destroyed.
Stewed Oystiers.-Put the juice into a saucepan and let it simmer, skimming it carefully; then rub the yolks of three hardboiled eggs and one large spnonful of flour well together and stir into the juice. Cut in small pieces, quarter of a pound of butter, half a teaspoonful of whole allspice, a little salt, a little cajenne, and the juice of a fresh lemon; let all simmer ten minutes, and just before dishing add the oysters. This is for two quarts of
oysters. oysters.
Broilmd. Oysters.--Drain select oysters in a colander. Dip them one by one into melted butter to prevent sticking to the gridiron, and place them on a wire gridiron. Broil over a clear fire. When nicely browned on both sides, season with salt, pepper, and plenty of butter, and lay them on hot buttered toast, moistened with a little hot water. Serve very hot or they will not be alce. Oysters cooked in this way and served on broiled Leefsteak are nice.
Fiind OxgTers, -Drain the oysters, and cover well with finest
of cracker crumbs, seasoned with salt and pepper. Let them stand lalf an hour, then dip and roll again in the meal ; fry brown in a good quantity of lard and butter.

## POULTRY.

How to Choose Poultry.-Young, plump, aud well fed, but not too fat poultry $\mathrm{r}^{\text {no }}$ tha best. The skin shonld be fine grained, clear, and white; che Llenstofull, fleshed, and broad; the legs simooth. The bird must be heavy in proportion to their size. $\AA \bar{s}$ regards ducks and geese, their breasty must also be plump; the feet flexible and yellow. For boiling, white-legged poultry must bo chosen, because when dressed their appearance is by far the finore delicate. But darker-legged ones are juicy and of a better flavor when roasted. The greatest precaution ought to be taken to prevent poultry from.getting at all tainted before it is cooked. It should be killed and dressed from eight to ten hours before cooking. Pigeons are far better tor being cooked the day they are killed, as they lose their flavor by hanging. Care must be taken to cook poultry thoroughly, for nothing is more revolting to the 1alate than underdone poultry.
Plain Stuffino. - Take stale bread, cut off all the crust, rub very fine and pour over it as much melted butter as will ! make it crumble in your hands; salt and 1 icpper to taste.
Apple Stoffing - Take half a yound of the pulp of tart apples which have been baked or scalded; add two ounces of bread crumbs, sone powdered sage, a finely shred onion; seasoil well with cayeune pepper. For roast goose, duck, etc.
Cuestnut Sturfing.- Hoil the chestnuts and ahell them, then blanch them and boil until solt; mash them fine and mix with a little sweet cream, some bread-crumbs, p ppper and salt. For turkey.

## meats.

In selecting beef, choose that of a fine, smoolì grain, of a bright red color and white fat.
The sixth, seventh and eighth ribs are the choicest cuts for a Lutcher send the bones for soup. The flesh of good veal is fimmand dry, and the joints stiff.'
The flesh of good mutton or lamb is a bright red with the fat firm and white.
If the meat of pork is young, the lean will break on being pinched; the fat will be white, soft and pulpy.
Rules for Bolling Mrat.-All fresh nueat should be put to cook iu boiling water, then the outer fart contracts and the interual juices are preserved. 'For making soup put on in cold water. All salt meat should be put on in cold water, that the salt may be-

## DR. CHASE'S RECIPES.

extracted in cooking. In boiling meats it is important to keep the water con stantly boiling, otherwise the meat will abso:b the water. Be careful to add boiling water, if more is needed. Remove the scum when it first begins to boil. Allow about twenty minutes for boiling for each pound of fresh meat. The more gently meat boils the more tender it will be.

I' Broil Meat well, have your gridiron hot before you put the meat on.

In Roasting Beef, it is necessary to have a brisk fire. Baste often. Twelv́s minutes are required for every pound of beef. Season when nearly done.

I'o Cook Venison. - Broil as you would á beefsteak, rare ${ }_{e}$ Have ready a gravy of butter, pepuer and salt, and a very littl water. Heat the gravy without boiling it. Score the steak all over, put it in the gravy and cover tight; keep hot enough to steam the meat, and send in a covered dish to table.

## SAUCES.

Cranberry Sauce.--Oue quart of cranberries, one quart of water, and one pound of white sugar ; make a syrup of the water and sugar. After washing the berries clean, and picking out all poor ones, drop them ints the boiling syrup; let them cook from 15 to 20 minutes. They are very nice strained.

Drawn Butier Sauce.-One quarter pound butter, mb with it two teaspoonfuls of flour. When well mixed, put into a saucepan with one-half pint of water or stock ; cover it, and set the saucepan into a largei: one of boiling water. Shake it constantly till completely melted and beginning to boil ; season with salt aud pepper.

Caprer Sauces. - Make a drawn butter sauce, and then add 2 - or 3 tablespoontuls of French capers; remove from the fire and add a little lemon juice.

Boilmd Ega Sauce:- - Add to half a pint of drawn butter sance two or three hard boiled eggs, chopped,
Pickle Sauce.-Add to half a piut of of drawn butter sauce three tablespoonfuls of piekled cucumbers, minced fine.

Tomato Sadce.- Stew one can of tomatoes, one small onion, for 20 minutes, and then strain through a sieve. Put an ounce and a half of butter into 8 sauce-pan, and when it boils, dredge in an ounce and a half of flour. When thoronghly cooked pour in the tomatoes.

Tomato Sauce. - One can tomatoes bofled down and strained rub together one heaping teaspoonful of flour, one tablespoonful of butter, and a little salt, with a very little cayenne perper, and stir

## APPENTDIX.

## SALIDS.

Mayonnaise Salad Drisging. -The yolk of one egg, raw; stir into this all the olive oil it will hold, in as fine a stream os possible. Season witli cayenne pepper, salt and mustard.
Simple Dressing for Salads.- Mix three tablespoonfuls of olive oil and one tablespoonful of scraped onion, with one saltspoonful of salt and one saltspoonful of pepper (mixed), and then add one tablespoonful of vinegar. When thoroughly mixed, pour
over the salad.
Chickln Salad Dressing.-Take two hard-boiled eggs, lay them into water till quite cold, put the yolks into a small bowl and mash them very fine, adding the yolks of two raw egge, ono teaspoonful of salt, one large tablespoonful of dry mustard, and a very little csyenne pepper; stir this well always one way ; when well mixed, add a very little sweet oil, stirring all the time. After this is mixed, put in more, a very little at a time, until you have used a third of a bottle, then add a large spoonful of vinegar or lemon juice, then more oil as betore, using in all two. thirds of a bottle, then another spoonful of vinegar; when well mixed it must be very light, and a nice color. Set on the ice for two or three hours; not more than twenty minutes before using the salad, mix it and prepare for the table by putting with the meat about half the dressing, stir it up well, and then pour on to the meat one wine glass of best vinegar; stir this $u_{r}$ well ; it will turn the chicken very white; if it requires a little more; salt, add it now. Place the chicken in the centre of a flat dish, large enough to lay lettuce or celery around the meat, ipe the lettnce as dry as you can, and lay around the eat, then with a spoon put the rest of the dressing on the

Chicken Celerx. - Chop the remains of chicken or turkey, and mix with an equal proportion of celery; a little salt and vinegar only, although some like a dressing as for slaw, but this takes away too much of celery taste. It may be prepared with lettuce instead of celery.
Cabbage Salad. - Cut the cabbage very fine, and put into a dish in layers, with salt and pepper between. Then take two teaspoonfuls of butter, two of sugar, two of flour, two of mustarl, one cup of vinegar, and one egg. Stir all together and let it come to a boil on the stove. Pour it hot over, and mix well with the cabbage ; cover up.
Lobstrer Salad.-Pick the meat from the shell, chop and season the same as for chicken salad; garnish with the claws and parsley.

COOKERY FOR THE SICK,
Brep Tea, - Very nice beef tea is mado by cutting up. tenièr, fricy beef into pleces about one inch square; put into a strong *
bottle, cerk tightly and set in a kettle of cold water. Bail it about two 'hours; the fluid then obtained will be the pure nutriment of the meat.

Veal or Mutton Broth. - To each pound of meat add one quart of cold water, bring it gently to a boil ; skim it and add salt ; simmer the broth about three hours. A little rice may be boiled with the meat. When cold skim off the fat.

Chicken Broth. - Take part of a chicken, joint it, and cover with water ; let it boil closely covered until the meat drops from the bones; then skim off the fat, istrain, and season with a little salt, and if liked add a teaspoonful of rice, and let boil until the rice is cooked.

Scraped Beef.-Take a good piece of raw steak, lay it on a meat board, and with a knife scrape into fine bits; after removing all hard or gristly parts put it into a pan over the fire let it remain just long enough to become thoroughly heated through, stirring it from the bottom occasionally ; season with a little-salt. This is very nutritious and quite palatable.
To Prepare an Egg.-Beat an egg until very light, add seaconing to the taste, and then steam until thoroughly warmed through, but not hardened. This will take about two minutes. An egg propared in this way will not distress a sensitive stomach.
Milik Porridge.-Make a thin batter of white flour and cold milk, and stir it into boiling milk with a little salt. Let it boil for a few minutes, stirring all the time.

Panada.-Shave some very thin soft parts of light bread into a bowl, put in a piece of butter the size of a large hickory nut, grate over this some nutmeg, pour on boiling water, cover and let stand a few minutes. If stimulant is required add brandy.

Oatmeal Gruel.--Put two large spoonfuls of oatmeal, wet in cold water, into one pint of boiling water, boil it genitly one half hour, skim, and add a little salt, sugar and nutmeg.

Wine Jelly.-Melt in a little warm water one ounce of isin. glass, stir into it one pint of sherry wine, adding two ounces of sugar, an ounce of gum arabic and half a nutnreg, grated; mix all well and boil ten miputes, or until everything is thoroughly dissolved ; then strain and set away to get cold.

Barley Water. - Soak one pint of barley in lukewarm water for a few minutes ; then drain off the water. Put the barley into three quarts of cold water, and cook slowly until the barley is quite soft, skimming occasionally. This barley water, when cold, flavor with a little jelly or lemonade.

Rice Milk.-Plek and wash the rice carefuily; boil it in vater until it swells and softens; when the water is partly boiled away add some milk. It may be boiled entirely in milk, by setting the vessel in which the rice is, in boiling water; sweeten with white sugar, and season with nutmeg. It may also be thiekened with a little flour or beaten egg.

Flax-Shme Tea.-One-half pound of flax-seed, one-half pound of rouk-onndy, and three lemons pared and sliced; pour over this two quarth of bolling water ; let it stand until very cold; strain before drinking. This is good for a cough.
Apruable,-Cut two large apples in slices, and pour on them oue pint of boiling water; strain well and sweeten. Ice it before driuking.
T'oast Waym. - Toast stale bread until quite brown, but do not buruit; pat ic into a large bowl, and pour over it boiling water ; let it ptamd for an hour or so ; strain and put in a piece of ice be. fore drinking,
Tonst.-T'onst bread until a nice brown all over, taking great care not to burn ; butter each slice, dip into hot water; or pour over enoh plece enough sweet cream to moisten it.
Winh Whry, - Sweeten one pint. of milk to taste, and when bolling throw in two wineglasses of sherry; when the curd forms, strain tho whey through a muslin bag into tumblers.
Arhownoot Custalids. - Boil a pint of milk, and while boiling stir into it one largo spoonful of arrowroot mixed smooth with a little cold milk; add a little salt ; let it boil three or four minutes, then let It cool, and add a couple of beaten eggs, sugar and nutmeg, to the taste, and set it where it will get scalding hot, stirring all the time. As soon as it boils up turn it into custurd cups.
Crackid Whist.- To one quart of hot water take one sinall teacup of oracked wheat and a little salt; boil slowly for half an hour, stirring ocoasionally to prevent burning. Serve with sugar and cream of new milk.
Raw Eac.-Break a fresh egg into a glass, beat until very light, sweeten to takte, and add two tallespconfuls of port wine, then beat again.
Finif Hominx.- Put to soak one pint of hominy into two and one-halt plats of boiling water over night in a tin vessel with a tight oover; in the morning add one-half pint of sweet milk and a litile aalt. Place on a brisk fire in a kettle of boiling water ; let boll one-half hour.
Oatmeat Musif,--Sift into boiling water with a little salt, oatmonl untll about the consistency of common mush ; let it boil one-half hour.

Blackberky Comdial. - Warm and squeeze the berries; add to one pint of juice one pound of white sugar, one-half ounce of powdered olmamon, one-fourth ounce of mace, two tablespoonfuls of eloves, Boll all together for one-fourth of an hour; strain the gyrup, and to each pint add a glass of French brandy. Two or three dosen of a tablespoonful or less will check any slight diarrhoa. When the attack is violent, give a tablespoonful after each discharge until the complaint is in subjection. It will arrest dysentery if given in season, and is a pleasant and safo
remedy.

Dried Flour for Infants.- Take one teacupful of flour, tio it up tightly in a close muslin bag, and put it in a pot of cold water and boil three hours; then take it out and dry the ontside. When used, grate it. A tablespoonful is enough for one teacupful of milk (which would be better with a little water); wet the flour with / little cold water and stir into the milk; add a very little
salt and boil five salt and boil five minutes,
Oyster Toast.-Make a nice slice of toast and butter it; lay it in a hot dish; put six oysters, a teacupful of their own liquor, into a tin cup and boil one minute. Use half mill if preferred. Seasou with a little butter, pepper and salt, and poür over the
toast toast.
E.ga Gruel.-Beat the yolk of one egg with one tablespoonful of sugar; pour one teacupful of boiling water on it; add the white of the egg beaten to a froth, with any seasoning or spice desired. To be taken warm.
Molled Jelly.-Take one tablespoonful of current or grape jelly ; beat with it the white of one egg and a little loaf sugar ; pour on it one half-pint of boiling water and break in a slico of dry toast, or two crackers.
Irish Moss Blanc-Mange.-Pick over 'carefully one teacupful of Irish moss! wash it first in saleratus water ; then rinse it several times in fresh water. Put it in a tin pail with one quart df milk; cover closely and set in a kettle of boiling water. Let it stand
 until it begins to thicken, then strain through a fine sieve and sweeten with powdered sugar; flavor and pour into a mould and aet in a cool place. When quite firm turn out in a dish. Eat with sugar and cream.
Chicken Jelif.--Cut up a chicken and put into a quart of cold water; let it simmer until reduced to a little less than a pint; remove from the fire, and strain as for jelly. Season with a little salt. Chop the breast meat into small pieces, and mix with liquor, and then pour the whole into a mould and set away

## PUDDINGS.

In boiling pudding, have plenty of water in the pot boiling when the pudding is put in, and do not let it stop; add more as it is meeded. Turn the pudding frequently. If a cloth is used, dip the pudding when done in a pan of cold water, so that it can be removed easily.
In using moulds, grease well with butter, tie the lid closely, and set in a pot with very little water, and adḍ more as needed.

Fruit sauces are nice for blanc-mange and corn-starch puddings, Fresh red cherrics, stewed, sweetened and passed through a sieve, and slightly thickened with corn-starch, make a good sauce.

## APPENDIX.

teaspoonfuls of light brown sugar, two ounces of butter; stir into a teacup of boiling water, quickly and well, until it has dissolved; on no account omit stirring constantly till well dissolvel, or it will lose its lightness, add grated nutmeg to taste. Serve hot.
Pudding Satce.- One cup of sugar, yolk of one egg well beaten with the sugar, four tablespoonfuls of boiling milk; add the whites well beaten.
Pudding Sajce. - Rub to a cream two cups of sugar with threefourths of a cup of butter ; flavor to taste; float the dish in boiling water until well heated ; pour one-half pint of boiling water on it just before serving.
Lemon Sauce.- One-half cup of butter, one cup of sugar, yolks of two eggs, one tensnoonful of cornstarch. Beat the eggs and sugar until light ; add the grated rind and juice of one lemon. Stir the whole into three gills of boiling water until it thickens sufficiently for the table.
Lismon Sauce.-One large tablespoonful of butter, one small tablespoonful of flour, one cap of sugar, grated rind and juice of one lemon.
Strawberry Sajce.-Rub half a cup of butter and one cup of sugar to a cream ; add the beaten white of an egg, and one cup of strawberries thoroughly mashed.
Hard Salce foin Puddings.-One cup batter, three cups sugar, beat very hard, flavoring with lemon juice; smooth iuto shape with a knife dipped into cold water.
English Plum Pudding.-Nine eggs beaten to a froth; add flour sufficient to make a thick batter free from lumps; add one pint new milk and beat well ; add two pounds of raisins, stoned, and two pounds currents washed and dried, one pound of citron sliced, one quarter pound bitter almonds divided, three-fourths of a pound brown sugar, one nutmeg, one teaspoon of allspice, mace und cinnamon, three-fourths of a pound beef suet, chopped fine; mix three days tefore cooking, and beat well aqain ; add nore milk if required. If made into two puddings, boil four hours..
apple or Peach Dumplings. - Pare and core fine juicy apples ; then take light loead dough, cut in round pieces half an inch thick, and fold around each apple until well covered; put them into a steamer, let them rise, then set the stenmer over a pot of boiling water, and steam. Eat with butter and sugar, or cream. : Use peaches in the same way.
Baked Apple Dumplings.- Cook apples almost entirely whole, coring or not, as you may prefer ; melt butter and sugar in a bak-ing-pan, and, having enclosed them in a good paste, bake; baste them constantly.
Apple Batter Pudding.-Three eggs one coffeecup of sour milk, one large teaspoonful of butter, three large tablespoonfuls of sugar, one-haif tablespoonful of soda, aud flour enough to make a batter as stiff as cake. Add quartered apples as desired.

Bread Podding.--One coffeecup bread crümbs, dried and rolled fine ; one teacup sugar, one quart of milk, oue teaspoonful ginger, a little salt, three eggs (saving the whites of two). When baked, spread jelly over the top, then a frosting made of the whites of the eggs, and one tablespoonful of sugar. Return to the oven until slightly browned,
Bread and Apple Pudding--Butter a pudding dish; place in it alternate layers of bread $\cdots$... mbs trd thinly-sliced apples; when the dish is filled, let the top layer be of bread crumbs, over whiel two or three tablespoonfuls of melted butter should be poured: Bake in a moderately hot oven, and place two or three nails under the pudding-dish to keep from burning in the bottom; let it bako from three-quarters to a whole hour, according to the quality of the cooking apples.
Cabinet Podding. - The remains of any kind of cake broken up, two cups; half cup raisins; half can peaches, four eggs, one and a half pints of milk. Butter a plain pudding mould and lay in one of the broken cakes, one-third of the raisins, stoned, onethird of the peaches; make two layers of the remainder of the cake, raisins and peaches: Cover with a very thin slice of bread, then pour over the milk beaten with the eggs and sugar. Set in a sance pan of boiling water to reach two thirds up the side of the mould, aud steam three-quarters of an hour. Turn out carefully on a dish, and serve with peach sauce, made as follows : Place the peach juico from the can into a small sauce-pan; add un equal volume of water, a little more sugar and eight or ten laisins; boil ten minutes, strain, and, just before serving, add six drops of bitter almond.

Cracker Poddina,-Mix ten ounces of finely-powdered crackers with a little salt, half a nutmeg. three or four tablespoonfuls of sugar, and three of butter ; beat six eggs to a froth; mix with threo pints of milk ; pour over the crackers, and let it stand till soft; then bake.
Sauof for Cracker Pudding.-One cup of sugar, one-half oup of butter, one egg, one teaspoonful of grated nutmeg, one lemon, inside grated, three tablespoonfuls of boiling water.
Cocoanut Pudding.-One.quarter of a pound of butter, yolks of five eggs, one-quarter of a pound of sugar : beat butter and sugar together; add a little of the cocoanut at a time, and onehalf teacupful of oream. Do not bake too long, or it will destroy the flavor. Use one cocoanut. After it has baked, beat the whites of the eggs with four or five tablespoonfuls of sugar. Spread over the pudding and bake a light brown.

Chocolate Popding.- Scrape very fine two ounces of vanilla chocolate ; put it into a pan, pouring over it one quart of now milk, stirring it until it boils; and adding by degrees four ounces of sugar, milling the chocolate until it is emonth and light; then your out to cool; boat eight eggs to a froth; and mix with the
bs, dricd and rolled to teaspoonful ginof two). When sting marle of the ugar. Return to

sugar, one-half ted nutmeg, one ing water. of butter, yolks beat butter and a time, and oneor it will destroy baked, beat the nfuls of sugar.
runces of vanilla 18 quart of new grces four ounces and light ; thez d mix with the
chocolate; pour into a buttered dish, and bake three-qnarterim of an hour. Servo cold with sifted sugar over it.
Suet Pudding.- One teacupful of molasses, one of suet, one of sweet milk, two cups of raisins, two and one-half cupe of flour, one teaspoonful of ginger, one of cinnamon, one-half teaspoonful of all-spice, one-half teaspoonful nutmeg; one teaspoonful of soda. Boil or steam. Make sauce same as for plum pudding.
Sago Pudding.-Two large spoonfuls of sago boiled in one quart of water, the peel of one lemon, a little nutmeg; when cold add four eggs and a little salt. Bake about one hour and a half
Eat witli sugar and cream.
Tapioca Pudding.- Four tablespoonfuls of tapioca, one quart of milk, four eggs, leaving out the whites of two for frosting three tablespoonfuls of sugar. Soak the tapioca over night, or for several hours, in a little water. Boil the milk and turn over th tapioca. Add, when it is blood warm, the sugar and eggs well beaten ; bake about an hour, and after it has cooled a little add the whites of the eggs to one-half pound of sugar for frosting. It answers well for a sauce, and looks quite ornamental.
Rice Pudding. - Soak one cupful of best rice; after soaking four hours, drain it off ; place the rice in pudding dish; add one cupful sugar, and one teaspoonful of salt, and eleven cupfuls milk and spice ; put in a moderato oven, and bake from two to three hours, stirring occasionally at first, if the rice settles.

## BREAD, BISCUITS, ETC.

Yeast.-Take two good-sized potatocs, grate them raw. Add Pe-half teacupful white sugar, one teaspoon of salt, a little ginger. Pour over the mixture one-half pint of boiling water, in which one tablespoonful of hops has been boiled. Save half a cup each time fo start anew.
Yeast.-1'o oné cup of grated raw potato add half cup salt and half cup sugar; pour over all one quart of boiling water, stirring well : it will thicken like stareh; when nearly cold, add one oup of good yeast. In abous twelve hours it should be light; put in jug or bottle, and cork tightly.

Yeast. - A double handful of hops, one half-dozen large po. tatoes; boit together in one half galion of water till done ; strain and mash on to one-half cup of ginger, small oup of flour, and one oup of brown sugar, and half cup of salt. Let stand until cool, then add one cupful of good yeast. Next day cork up tight in a jug.

Yeast and Brad.-Take ten large potatoes, pare and put them in a kettle with three quarts of water; put a pint of hops in a thin muslin bag in the seme rettle witin the potatoes; boil unti] potatoes are soft, then pour the water from this kettle boiling hot over a pint of flour in a crock. Squeeze ail the strength
from the hops; mash the poiatoes, add a quart of oold water to
them, and put through a colander into the crock, and add onehalf toacup of salt, a cup of augar, one tablespoonful of ginger. then put into a jug, cork days until it stops fermenting aud setties;
For thi Bread. - Pare and and keep in a cool place. off the water, mash fine, and boil six good-sized potatoes, drain of cold water and rum through a colander is a thin batter, then put in a coffender. Add flour until this Let stand until it rises, then stir into it of yeast from the jug. with a spoon, and let rise again into it flour as much as you can make as stiti as bread, and let rise thor in enough more flour to this time work out into loaves, and let rise time. When light解
To Freshen Stale Bread. - Pump on or pour water over the loaf until moistened through, put in a pan, set in the oven and bake until the moisture is ally absorbed.
Mile Spgnge Bread. - Put a pint of boiling pitoher, with a teaspoonful of sugar; one quailing water in a salt, and the same of soda; let it stand till you teasporinful of finger in it ; then add flour to make a thiok you can ibear your for two minutes. Now place the pitto thiok batter; beat it hard -not hof enough to scald the mistuher in a kettle of hot water same temperature till the emptyingero; keep the water at the the morning they will be roady, if ware light. If set early in o'clock to make a sponge, the same watched carefully, at eloven quart of very warm milk. Let this as for other bread, with $a$ " make into loaves and set to rise againge get very light ; then get too light this time before putting in, taking care they do not will be dry and tasteless. Salm-Rising 3read.-Take newly-ground middlinge; put eix heaping teaspoonfuls of it in a coffee cup of sugar, one saltspoon of salt, one-half ssitspons teaspoonful thoroughly ; pour boiling water in the mirtpoon of soda; mix together untll it will nearly fill the cup ; remove, stirring it well the cup of dough; set it where it will reep warn the spoon, eover it Friday morning, ad it will he light feep warm, not scald; get in a hurry, set in a dish of warm light for Saturday's baking; if flour enough for bread; add salt ; tater. Now put in bread-pan for thrse loaves, and turn into the mide one quart of boiling water lowly ; put enough oold water (or milk) too your flour, stirring in your tinger in it; then add middlings too cool sufficiently to bear some of the flour and aet in a warm pl-stir in well; cover with mix soft into loaves; grease bread place. When light onough, which makes a tender upper crust-pans; also top of the loaves, the loaves, and it will rise evenly ; cut gashes quite deep across light enough, bake threequarters ; set near the stove, and when

around the top of the hoof down one inch every third day; if for split hoof, apply it every day. First, have a stiff shoe on the foot, and cleanss the cut or crack. Never cut or burn for it.

Hoof Ointment. - Take resin, 4 ozs.; bees wax, 9 ozs.; lard, 2 lbs.; melt together, pour it into a pot, and turpentine, 3 ozs .; finely powdered verdegris, 2 ozs .; tallow, 1 lb .-stir all until it gets cool. This is one of the best medicines for the hoof ever used. It is good for corks or bruises of the feet. Follow the dire tions.

Hoof Liquid. - For tender feet, hoof bound, etc. Linseed oil, or neatsfoot oil, $\frac{1}{2} \mathrm{pt}$. of cither ; turpentinc, 4 ozs ; oil of tar, 6 ozs. ; origanum, 13 ozs.; shake this well and apply it as the lintections for the ointment tells. This is the best if the horse has been lame long-it penetrates the hoof sooner than the ointment-both of them should be applicd at night, so that the horse can go to work in the morning. He need not lose one day's work.
MAGGOTS IN SHEEP--TO Des'rnoy. - Water, 1 qt .; spirit of turpentine, a tablespoonful ; sublimate of mercury, as much as will lie upon a shilling; cork in a bottle, with a quill through the cork, so that the mixture may come a little at a time. Shake before using. Pour a little of the mixture upon the spots where the maggots are, and they will creep upon the top of the wool, and fall off dead. Apply aftorwards a little train oil to the place.

Liniment for Bruises, Sprains and Spavins.-Oil of amber, 1 oz . ; oil of wormwood, 1 oz ; oil of tansy, 1 oz .; oil of spike, 1 oz.; camphor gum, 2 ozs ; ammonia, 2 oz ; small piece of Castile soap ; spirit of wine, 1 pt. Rub in thoroughly with the hand. This receipt is rather strong for most cases, and will bear a little water added in ordinary cases, or where there is much inflamma. tion; but in severc cases use full strength.

## TOILET DEPARTMENT.

## COMPLEXION.

We will give a few words of advice, as an assistance in the preservation of the complexion. Rise early and go to "bed early. Take plenty of exercise. Keep the pores of the skin open by perfect cleanliness. Be moderate in eating and drinking. Do not often frequent crowded assemblies, and shun cosmetics and washes for the skin. We will give a few harmless recipes. But most of the powders and washes dry up the skin; and in the end rizaie it rough.
Be careful always in washing to wipe your skin dry, particularly your hands; rub them briskly for some time. If hands are left moint after washing they will chap, crack and become red. Honey is excellent to rub over chapped hands, or anoint them with cold creain or glycerine before retiring to rest.

## DR. CHASE'S RECIPES.

If you desire to make your hands delicate wash them in hot milk and water for a day or two; on retiring to rest rub them with palm oil, and put on gloves ; wash them well in the morning. hamds. water, lemon juice or soar milk will remove sunburn from Complexion to keep the nails scrupulously clean. air in-doors and out-doors as ir.- Be cheerful; get as much fresh good digestion, and regular evessible. Keep in health; promote a milk and vegetable diet makes ations; avoid alcoinolic drinks ; a without condiments and hotes a fair complexion; plain living, face It is good to rise early ineasonings, etc., mai.es the fairest walk into the fiel.is, wash the the morning, drink a cup of milk, creation, below, above, and all acoe in sparkling dew, gaze on beams forth on your face in rall around you, till mental pleasure grief, disappointments, embarrassmeniles. Freckles:-Take of sal ammoniac, powdered, 1 dr ; boiling water, 1 pt. ; dissolve and atrain, adding, when cold, spirits of rosemary, $\frac{1}{2}$ oz. ; lavender water, 2 dr. Mix and use twice a day; or a little magnesia, taken occasionally as a corrective, and a. lotion for the face, to be used twice a day, composed of 9 ozs: of elder-flower water in which 4 grm . of oorrosive sublir thave been dissolved, may be substituted.

Somepersons premcribe critic acid dissolved in a water of strength sufficient to produce a slight prickling sensation, The juice of a lemon, squeezing into half a tumbler of water, is, however, a more certain means to effect the aame remult ; or a little glycerine, mixed with elder flower water, may be tried as a cosmetio wash. Any of these preparatipys, however, are useful, especially whien aasisted by the alteratives of magnesia, blie pill, and aeiflitz powder.
A Cure for Pimples.-Many of our young people are much troubled with an irruption on the face. It often prores a great annoyance to them; buis there is a simple remedy, which, if it does not effect a complete cure, will obviate the diffioulty in a great degree, without the least injury to the health or skin.
To 1 gr . of corrosive sublimate add 1 oz . of rose water; filter and apply twice a day.
Hands, to Whiten.-Take a wine glass of Eau de Cologne, half a cup of lemon juice, scrape two cakes of Windsor soap to a powder ; mix well, then add a teaspoon of sulphuric acid. Mould it and let it harden.

Compounds to Promote the Growth of the Hair,- When the hair falls off. from diminished action of the wcalp, preparations of cantharides often prove useful; they are sold under the names of Dupuytren's Pomade, Cazeuze's Pomade, etc. The following direotions are as good as any of the more complicated recipes :

Pomade Againgt Baldness.-Beef marrow, soaked in zeveral waters, melted and strained, half a pound ; tincture of cantharides (made by soaking for a week 1 dr . of powdered cantharides in 1 oz . of preof spirit), 1 oz ; oil of bergamot, 12 drops.

Erasmos Wilson's Lotion Against Baldneps.--Elau de Co$\operatorname{logne}, 2$ ozs. ; tincture of oantharides, 2 drs. ; oil of lavender or rosemary, of either 10 drops. These applications must be used once or twice a day for a considerable time; but if the gcalp becomes sore they must be discontinued for a time, or used at longer intervals:

Bandolinis, oll Fixaten.--Several preparations are used ; the following are the best : 1. Mucilage of clean picked Irish moss, made by boiling $\frac{4}{}$ oz. of the moss in 1 qt. of water until sufficiently thick, reotified spirit in the proportion of a teaspoon to each bottle to prevent its being mildewed. The quantity of spirit varies acenrding to the time it requires to be kept. , 2. Gum tragacanth, $1 \frac{1}{2}$ dre. : water, $\frac{1}{2}$ pt. ; Proof spirit (made by mixing equal parts of rectified upirit and water), 3 oz . ; otto of roses, ten drops ; soak for twenty-four hours and strain.

the floor; arge piece to be done miove the the skin,
or break any blister; if there should le pieces of burnt olothing adhering to the budy; do not spend time trying to pick thom onf. Then wrap the entire surface in carded cotton or wadding --the ob. jeet being to oxolude the air. This is the main objeet of all kinds of dressing for lurns. If cotton is not at hand, dust the parts thickly with flour or finely pulverized chalk. When there is time to prepare an ointment, the ohalk ointnent, a linament of lime--Water and linseed oil, or of Jinsced oil with a littlo carbolio acid, are the best applications. If the person is mueh exhaustol, and especially if the burn has been extensive, give a little brandy and

## CONVULSIONS.

In convulsions or fit;, whether apoplectic, epileptic or hysterical, the chief thing is to keep, the person from harting himself, not somuch by holding him as by puarding him from the effeeth of his own violent movements: Raise the head, loosen all tight clothes, strings, cte. If the head is hot, as is usually the oasu, apply ice orcold water, and warmth to tho entremities. Sun stroke and lightning stroke are treated similarly. Children in fits should be put into a warm bath, with cold applications to the hoad.

## DROWNING.

Handle the body gently; carry it face downwards, head slightly raised; never hold it if ly the feet, or roll it over barrels. The two great points to be arrived at are the restoration of breathing and the promotion of warmith. Remove all clothing from fase, neek and chest at once; place the person on the ground, faeo downwards, with one of the arms under the forehead, in whioh rosition fluids wili raadily escape from the nouth, and tho tongue fall forwards, leaving the entrance of the windpipe free ; wipe and cleanse the mouth at the sane time. If breathing commonoes satisfactorily, use treatment hereafterd eseribed to promote warinth. If no breathing, or only slight, turn the porson on the side, supporting the head, and excito the nostrils with snuff or smelling. salts, if convenient. If no result, replace the person on the face, raising and supporting the chest on a folded cont or other artiole; turn the body gently on the side, then briskly on the faoe, then back again-repeating the movement about once every fivéseconds. On eneh occasi-ou that the body is con the face, make steady prossure with brisk movement on the back between the shoulder blandea, removing the pressure immediately before turning on the gide. (This is Dr. Marshall Hall's method of inducing respiration.)
While thesc operations are being proceeded with, some ono porson should attend solely to the movenonts of the head and tho arm placed under it ; another should dry the body, and extrenitioe,
removing wet clothing and cover it with clry and warm clothingtaking care not to interfere with the movements to induce respir-

If after five minutes this method does not prove successful, Dr. Sylvester's plan may be tried, as follows :

Placo the person on the back, shoulders supported; tongue drawn well forward and retained between the teeth by raising the lower the elbows, and at the person's head, grasp the arms just mbove the head, keep them the arms gently and steadily upwards above turn them down and press them upwards for two seconds; then for two seconds. Repess them gently but firmly against thesides commences.

As soon hands encased incating begins rub the limbs upward with the keeping the body at the samen socks or mittens, or dry clothsPlace warm bricks, bottles, etc. in tovered with warm blankets. thighs, on the pit of the sles, etc., in the arm-pits, between the spoonful of warm water stomach, at the soles of the feet. Givea has returned, small quantities of and if the power of swallowing and water.
Prevent unuece in a room ; avoid all ry crowding around the person, especially if restore life for an hour at l usage; and continue making efforts to have been thus restored aftert, and even longer. Some persons (These rules for the reater several hours effort. similar to those issued by ation of England ; and are used Royal National Life Boat Associused in the British army and navy.)

## FAINTING.

Loosen the garments ; lay the body in a horizontal position; give plenty of fresh air, dash cold water on the face; apply hartshorn smelling salts, to the nose.

## FROST BITE.

Rub the frozen part slowly and steadily with snow, or bathe with cold water, in the open air or cold room ; cuntinue till circulation is restored. When the entire person has been rendered insensible aud, of course, applied cold, the same treatment is to be adopted; soon as sensibility returns, the whole body at the same time. As son to bed in cold sheots an, carefully dry the body, and put the pergruel, with a little weah brand cold room, giving a few spoonfuls of bo used in giving stimulants ; as the water. Great caution has to

## HANGING.

A person found suspended should tee taken down gently, the cord or rope loosened and removed, and then treated as thouth drownod. Bleeding from the temporal artery by sone competent gerson is generallv required.

## HEMORRHAGE.

When an artery is cut the blood flows in jets, and is of a bright kearlet colar. If the vein is injured the bluod is darker, and flows Iu a continuous strearn.
To arrest arterial bleeding, take a handkerchief and tie a knot in the middle of it, place the knot over the artery, aud tie the two ends to $n$ htick (a piece of broom lyandle or walking cane) by ineans of whloh tho haudkerchief can be twisted tight around the limb. If you cumat wait for this bandage place your thumb over the spot Whence the blood flows, and press hard, keepingtip the pressure (ill $A$ bandage cau be applied, or till a surgeon arrives.
Bleeding from a vein can usually be arrested by a compress and a bandage.
Alwayy renember that in arterial bleeding the bandage is to be uphlied, and prossure made, between the wound and the heart; in venous bleeding the pressure is to be on the side of the wound furthisst from the heart.
Bleeding from the nose may usually be arrested by the applicafion of cold to the forehead, the temples, the face or the back of the neck. Cold water may be snufted up; the nose may be plugged with cottou batting dipped in some astringent, as alum, tincture of fron, tanuin, etc.
Whenever hleeding is at all excessive the person should be placed in a hiorizontal losition, head level with the body, or even lower. If on a bed, the lower part of the bedstead may be raised up, and brieks or blocks of wood placed uader its legs. Fresh air shonld ben nuphlied by fanning, cold driuks for thirst, and iee cold_applicatlons in the locality from whence the blood flows.

## POISONS.

When a person in apparently good health is suddenly attacked, after hiving taken food or drink, with violent pains and cramps in tha ntommoh, with nausea, vomiting, convulsive twitchings, aud a fhelling of suffiocation, or with extreme giddiness, delirium or nleapineers, 'polsoning may be suspected. Where poisoning is.gns. pented er hiown, "a physician should he inmediately sent for, and all romains of food taken by the sick person, all cups, glasses, dishes, ' ttc., used by him, togethor with all matters vomited, whould be ut ouce gathered up and preserved under lock and key.

## DR. CHASE'S RECIPES.

As a general rule of treatment in all cases of poisoning, free vomiting should be produced, and especially after those poisons which cause delirium or slceping. If the poison bas already caused vomiting, and the vomiting has bcen abundant, chalk, milk, the white of eggs and oil are useful. If an emetic is wanted, two tablespooufuls of mustard in a pint of warm water will be effectual, and can cusily be obtained. If no mustard can be had readily, large draughts of warm water, cither alone or mixed with oil, butter or lard, can be used. If there is no inflammation of the throat, erolly aecomplish the purpose a draught of warm water, will gen-

The following the purpose.
antidutes that are some of the more common poisons, with the Acins (Aat can be easily applied:
some of the plaster off th..)-Give ehalk or common soap ; tear with enpions dranghts of wall and powder it, washing it down. wator as possible. After the water. If sulphuric acid, as little milk, white of eggs, or mucilagor has been vomited, drinks of sood.)

Alikilifs (Potash, Soda, Lye, etc.)-Give acids, such as vinegar or oil, Lutter, lard.

Arsenic.-Any oil or fat. (Hydrated oxide of iron is the best antidote to arsenic, but is not likely to be at hand when wanted.)

Antimony ('Tartar emetic.)-Any astringent tea, such as oak bark, Peruvian bark, or very strong green tea.
Correr (Blue vitrol.)-Milk or white of egg in water. Avoid vinegar.
Gases. -- Where poisonous gases from old pits, cess-pools, etc., have been breathed to such an oxtent as to produce insensibility, dash cold water over head and shoulders, and give plenty of fresh air.
Mercury (Corrosive sublimate, etc.)-same as copper.
Ofrum (Morphine, Laudanum.)-Cause profuse vomiting at once; then give stroug coffeo; dash cold water on face, head and shoulders, and keep the person awake and in motion

Phosphords (This is a poison off matches. It also enters into many forms of rat poison.)-Magnesia with water, and copious draughts of mucilaginous drinks ; charcoal.

Silver (Caustic.)-Common salt in solution.
Strychnine. - Emeties freely.
Strammonivm (Thorn apple, )-Same as for opium. Give also
imal charcoal. animal charcoal. Never keep any poisonous article in the house without having the word POISON, in large letters, written or printed on it.

## POISONED WOUNDS.

THe Stings of Inserens though painful are not usually dangerous, yet they may prove so by inducingerysipelas in unhealthy con.

## APPENDIX.

stitutions, or by giving rise to intense irritation by the multiplicity of the stings. Apply cooling lotions, or a cold poultice ; rubbing with olive oil is sometimes useful; while touching the part stung with ammonia (hartshom) will often give immediate relief.
Snake Bites.-The bite of the rattlesnake is the principal form of snake bites to be dreaded in this country. The firstindication of treatment is to prevent the absorption of the poison into the system. If bitten on a limb, tie a ligature around it just above the wound; twist it so tight as to prevent circulation. The wounded part should then be burnt deeply with a red hot iron or aqua fortis dropped into it ; or, better still, cut out entirely. After this. a cupping glass should be applied, or, if not convenient, the wound may be sucked by some person-care being taken that there are no cuts, scratches, ulcers, or abrasions of any kind in the mouth of the person sucking. Frictions with oil to the limb are said to be advantageous. Whiskey may be taken by the person bitten; and in large quantities, sufficient to produce intoxication.

The Bitr of a Mad Dog gives rise to disease called Hydrophobia or Rabies. The bite is most dangerous when inflicted on a naked part, as on the hands or face. A person bitten through the clothing will often escape any ill effects, in consequence of the teeth being wiped and the poisonous saliva arrested by the clothes.
Symptoms of the disease do not usually appear for some weeks after a bite, and after a longer period elapses; and thus medical advice can be obtained before they appear. But if there is any canse to suspect hydrophobia in the animal, then some steps must be taken to prevent the absorption of the poison, as are advised in cases of snake bite.

Symptoms of Hydrophobia in the Dog.- When a dogor other animal is suspected to be mad, he should be confined and not killed until thecharacter of the disease is fully ascertained. Great relief may thus be given tothoso who have beenbitten. Rabies is to be suspected when the animal manifests a notable change of habits, becoming sly and irritable, oating straws, bits of paper, eto., and refusing food. When thediseasebecomesdeveloped, the appearanceis much changed; the look is depressed and haggard, the eyes and tail droop, the quality of the bark is altcred, the eyes are watery, the back part of the mouth reddened, saliva flows freely, and there is more or less fever; delirium supervenes, and the dog snaps at every nerson and every animal that comes in his way; and sometines at invisible objects; he is not ferocious, but. bites and runs away. There is dread of water sometimes, but this is not really a test, though supposed to be; a mad dog will frequently lap water without difficulty. Convulsions may or may not occur. Death usually takes place within five hourn.

## THE BYES.

The sensitiveness as well as the importance of these organs juatifien a word of advipe regarding accidenta thereto.

## DR. CHASE'S RECIPES.

If dust gets into the eyes avoid rubbing; syringe the eye with Water; separate the eyelids by drawing on them with finger, anil if the offending particle is visible remove it with the rounded point of a pencil or tho corner of a handkerchief:
Another method is to take hold of the upper eyelid near its angles with the iodex finger and thumb of each hand; draw it gently forward and as low down over the lower lid as possible; retaiu it in this position for a minuto, taking care to prevent the tears flowing out. Then when the eyelid is allowed to resume its place there will be a rush of water which will very likely carry out the offending particle:
If lime gets into the eyes it should be syringed out with vinegar and water. (One ounce of vinegar to eight of water.)
In wounds of eyelids or eyeball cold water bandages are useful in preventing inflammation.

CRAMPS.
Irregular spasmodic convulsions of the muscles in different parts of the body. Relief will be most readily given by friction, either with the hand alone, or a piece of flamel, and at the same time the application of heat.
Colic is the term applied to cramps in the bowels ; and requires the imnerliate application of cloths wrung out in hot water and turpentine or mustard-the feet at the same time being put in a hot bath, or, if not convenient, hot bricks applied to them.

## DELIRIUM TREMENS.

The deliriums of drunkards recuire emetics, cold applications to the head, heat to the extremities, and mustard to the nape of theneck, the back, and the soles of the feet. The emetios can be given in a drink of the liquor to which the person is accustomed, and will then be baken by him without any obj sctions.

FALLS.

A person who has fallen a great height, and is picked up either wholly or partially insensible, should, if possible, be placed at once on a wide board, or on a door taken from its hinges, so that in conveying him from oue place to another his body need not bo moved after the first lifting, until the surgeon takes hini in charge. He is almost certain to have broken some of his bones, and the less they are moved abount before being properly set the beiter: Ho All All crowding around ohotuld be avoided, and friesh air allowed to reach him freely. At the same time, as he will, in consequence of
the shock, be more or loss eold, warm applications shonld be ap. plied to the feet, and warm but light coverings thrown over the body. If at all sensible, a little warm tea, or spirit and wator, or wine, may be administered; if insensible, do not give any liquids, as they might flow into the larynx, but apply ammonia (liartshorn) or amelling-salts to the nostrils.
The injured part should be placed in as comfortablea position as possible, but handled very carefully. A simple fracturs is sometimes seriously complicated by carelessness or rough usage, which may cause the broken end of a bone to protrude through the skin. If a limb is injured let it take the easiest position possible - generally floxed. If the person has to bo removed any great distanc. before a surgeon can be obtained, wrap a quantity of cotton wool, or tow, around the broken limb-thickly, but evenly ; then get a large number of straight twigs or small sticks, lay them along the This and bind them to it, moderately tight, with stripes of cotton. This will keep the limb comparati vely still whilemoving the body; and should the person complain of the bandago being too tight, one or two of the sticks can be slipned out withont disturbing the
The general rule to be olsserved in all these eases, until the surgeon arrives, is to do as little as possible after onee getting the patient into an easy position ; keep him warm, if cold and cool, if hot; let everything around him be quiet; speal. encouragingly; and makehim feel as comfortable as he can be under the circumstances.

## MANAGEMENT OF INFANTS IN HOT WEATHER.

The following excellent rules for the care of infants during the hotmonths were prepared by a committee of six physiciaus appoint. ed for the purpese by the Obstetrical Society of Phiiadelphia:
Rute 1,-Bathe the child once a day in tepid water. If it is feeble, sponge it all over twiee a day with tepid water, or with tepid water and vinegdr. The health of the child depends much upon its cleauliness.
Rule 2.-Avoid all tight bandaging. Make the elothing light and cool, and so loose that the child may have free play of its limbs. At night uudress it, eponge it, and put on a slip. In the morning remove the slip and dress the child in clean clothes. If this oannot be afforded, thoroughly air the day-elothing by hanging it up during thenight. Use clean diapers, and change them often. Never dry a sciled one in the nursery or in the sitting-room, and never use one for a second time without first washing it.
Rule 3.-The child should sleep by itself in a cot or cradle. It should be put to bed ai regular hours, and be early taught to go to sleep without being nursed in the arms. Witiout the advice of a physician never give it any spirits, cordials, carminalives, sooth. ing-syrups, or "eping-drops, Thousands of children die svery
year from the ure of these poisons. If the chile 'rots and docs ot sleep, it is ellher hungry orill. If ill it needs a physicim. Neve: quiet it with candy or cake; they are the common canses of diarrhea, and other trombles.

Rule 4.-Give the child plonty of fresh air. In the cool of the morning and evening Eend it out to the shady troes of broad streets, to the public squaros of tho park." Make frequent nxcursions on the rivers. Whenever it soems to suffur from the heat, let it drhak freely of ice-water. Keep it out of the room in which washing or cooking is going on. It is excessive heat that destroys the lives of young infants.

Rule 5.-Keep your houso sweet and clean, cool and well aired. In very hot weather let the windows ho open day and night. Do your cooking in the yard, in a shed, in a gurret, or in an upier room. Whitewasi the walls every spring, and see that the cellar is clear of all rubbish. Let no slops collect to poison the air. Correct all smolls by pouring carbolic aeid or quicklime into the previes. The former article can be.get from the nearest clruggist, who will givo the ncedful directions for its use. Male every effort yourself, and urge your neighbors, to keep the gitters of your street or court elean.

Rule. 6.-Breast-mild is the only mroper fool for infunts. If the supply is amplo, and tho child thrives on it, no nther kind of food should be given while the hot weather lasts. If the mother has not enough she must not wean the child, but give it, besides the breast, goat's or cow's milk, as prepared under Rule 8. Nurse the child once in two or three hours during the day, and wes seldom as possible during the night. - Always 1 emove the child from the breast as foon as it has fallen asleop. Avoid giving the breast when you are overfatigued or overheated.

Rule 7.-If, unfortmately, the child must be brought up by hand, it should he fed on a milk-dict alone, and that, warm milk out of a nursing bottle, as directed unler Rule 8. Goat's milk is the best, and next to it cow's milk. If the child thrives on this diet, no other kind of food whatever. should be given while the hot wazather lasts. At all scasons of the year, but especially the sumper, there is no safe substitute for milk to an infant that has. not eut its front teeth. Sayo, arrow-root, potatoes, corn-flour, crackers, bread, every patented food, and ctery article of diet cons tainin;; starch, cannot and must not be depended on as food for very youns infants. Crecping or walking children must not be allowed to pick up unwholesome tood.
Rule 8.-Tach bottleful of milk should besweetened by a small lump of los $f$ suger. or by half a teaspoonful of crushed sugar. If the milk is know: as pure, it may have one-fourth part of hot water added to :t: 3 . ? ? not known to be pure, no water neer be added. Whev thet ost of tiz: wenther is great, the milk may be given quite colc. \& inc ut at the mill is unskimmed; have it
as fresh as possible, and brought very early in the morning. Before using the pans into which it is to be poured, always scald them with boiling suds. In very hot weather hoil tho milk as soon as it comes, and at once put awny the vessels holding it in the coolest place in the houso-upon ice if it can be alforded, or down a well. Milk carelessly allowed to siaud in a warm room soon spoils and
Rule 9.-If tho ruilk should disagreo, a tableapoonful of limewater may he ndled to each bottleful. Whenever pure milk cannot be got, try this condonsed milk, which often answers admirably. It is sold by all the leading druggists and grocers, and may. be prepared by adding, withput sugar, one teaspoonful, or more, aocording to the age of the child, to six tablespoonfuls of boiling witer. Should this disagree, a toaspoonful of arrow-root, of sago, cr of corn starch to the pint of milk may be cautiously tried. If milk in any shape cannot be digosted, try, for a few days, pure cream dilnted with throo-fourths or three.fifths of water-return ing to the milk as soon as possible.

Kule 10.-Tho nursing wottle must be kept perfectly clean; otherwise the milk will turn sour, and tho chitd will bo made ill. After each meal it slould be empticd, rinsed out, taken apart, and the tube, cork, nipple, and bottle be placed in clean water, or in water to which a littlo soda has been added. It is a good plan to have two nuraing bottles, anc to use thein by turns.

Rule 11.-Do not wean the child just before or during the hot weather, nor, as a rule, until after its second summor. If suckling disagrees with the mother, she must not wean the child, but feed it in part out of a nursing bottle, on such foöd as has been directed. Howevor small the supply of breast milk, provided it agrees with the child, the mother should carefully keep it up against sickness; it alone will ofton cave the life of a child when everything else fails. When the child is over six months old, the mother may save her strength by giving it one or two meals a day of stale bread and milk, which should be pressed through a sieve and put into a nursing bottle. When fiom oight months to a year old, it may have also one meal a day of beef or 'nutton-broth, into which stale liead has' be on crumbled. When older than this, it can have a lit tle meat $f \cdot n \cdot 1 \mathrm{y}$ minced; but then even milik should be its prinful food, and not such food as grown-up people eat.

## DIET OF INFANTS.

Boiled Flour, or Flour Ball.-Take one quart of good flour, tie it up in a pudding bag so tightly as to get a firm, solid mass, put it into a pot of boiling water early in the morning, and let it boil until bedtime. Then take it out and let it dry. In the morning. peel off from the gurface end throw wwaj tio thin rind of dough, and, with a nutmeg grater, grate down the hard, dry mass into a powdir. Of this from one to three teaspoonfula may be aser?

## DR. CHASE'S PIACIPHS.

by first rubbing it into a paste with a little milk, then adding it to a pint of milk, and, finally, by bringing the whole to just the boiling point. It must be given through a nursing-bottle.
An excellent food for children who are costive in their bowels may be made by using bran meal or uaholted flour instead of the white flour, preparing it as above directed.
Rice Water.-Wash four tablespoonfuls of rice, put it into two quarts of water, which boil down to one quart, and then add sugar and a little nutmeg. This makes a pleasant drink.
A half pint or pint of milk added to this just before taking it from the fire, and allowed to come to a boil, gives a nonrishing food suitable for cases of diarrhose.
Sago, tapioca, barley; or cracked corn. oan be prepared in the same manner.
Beef T'ea.-Take one pound of juicy, lean beef-say a pieee off the shoulder or the round-and mince it up with a sharp knife on a board or a mincing block. Then put it with its juice into an carthen yessel containing a pint of tepid water, and let it atand for two hours. Strain of the liquid through a clean cloth, squeezing well the meat, and add a little salt. Place the whole of the juice thus obtained over the fire, but remove it as soon as it has become browned. Never let it boil ; otherwise most of the nutritious matter of the beef will be thrown down as a sediment. A little pepper or allapice may be added if preferred.
Mutton tea may bo prepared in the same way. It makes an agreeable change when the patient has become tired of beef tea. Raw Beef for Children.- Take half a pouud of juicy beef, free from any fat; mince it up very finely; then rub it into a smooth pulp eithei in a nortar or with an ordinary potato-masher. Spread a little out upon a plate and sprinklo over it some salt, or some sugcr, if the child prefers it. Give it with a teaspoon or upon a buttered slice of stale bread. It makes an excellent food for children with dysentery.

## THE METRICAL SYGTEM OF WEIGHTS AND MEASURES.

The metrical system is now used very largely in the European Continent. and is employed frequently for seientific purposes. As references are continually made to it in the newspapers is well as in books, a description of it will be found useful.
The standard unit of linear measure is a metre; of capacity, a litrc; and of weight, a gramme. The namos of the higher orders, or the multiplies of the unit are formed by prefixes taken from Greek numerals, viz., decae 10; hecto, 100 ; kelo, 1000, eto. The lower orders, or subdivisions, are formed hy prefizes from Intin numerals, as deci, 10 ; centi, 100 ; milli, 1000 .
Bomembering this, and learning the value of the throe unita, we

Disinfecting Fumoleation.-Coinmon salt, 3 ozs.; black mangauese, oil of vitroil, of each, 1 oz.; water, 2 ozs.; carried in a cup through the apartments of the sick; or the apartments intonded to be fumigated, where sickness has been, may be shut up. for aul hour or two, and then opened.
Corfee a Disinfectant.-Nunerous experiments with roasted coffee prove that it is the most powerful means, not only of rendering animal and vegetable eflluvia innocuous, but of actually destroying them. The best mode of using the coffee as a disinfectant is to dray the raw bean, pund it in the mortar, and then roast tho powder on a moderately heated iron plate, until it assumes a dark brown tint, when it is fit for use. Theu sprinkle it in sinks or cesspools, or lay it on a plate in the room which you wish to have purified. Coffee acid or coffee oil acts more readily in minuto quantities.

Cinarcoal as a Disinfectant.-The great efficacy of wood and animal charcoal in absorbing eflluvia, and the greater number of gases and vapors has long been known. Charcoal powder has Also, during many ceuturies, been advantageously employed as a filter for putrid water, the objeet in view being to deprive the water of numerous organic impurities diffused through it, which exert injurious effeets on the animal econony. Charcoal not only absorbs eflluvia aud gaseous bodies, but especially when in contact with atmospheric air, oxidizes and destroys many of the casily alterable ones, by resolving them into the simplest combinutions they are capable of forming which are chiefly water and oarbouio acid.
Flies to Destroy.-A teaspoon of laudanum, and two tableapoons of water, strongly sweetened with sugar, placed in a saucer. Or dissolve quagsia chips in bulling water, and sweeten. Or a strong infusion of green tea, well sweetened. Or ground black popper and sugar, diluted in milk, and put on plates, etc.

Flies to Keep Off. .--Dust meat over with pepper or powdered ginger, or fasten it to a piece of paper on which camphor has been well rubbed, or a few drops of cresote.

Mixture for Destroying Flies.-Infusion of quassia, 1 pt., brown sugar, 4 ozs., ground pepper, 2 ozs. To be well mixed tngether and put in small shallow dishes when required.

To Destroy Flies in a room, take half a teaspoonful of black pepper in powder, 1 teaspoon of brown sugar, and 1 tablespoon of creani, mix them well together and plaee them in the room on a plate, where the flies are troublesome, and they will soon disappear.

FLirs.-Cold green tea, very strong, and sweetened with sugar; will, when set about the room in saucers, attract flies, and destroy

Grease, wo Clean From Fioors.-Spread over the stain a thick coat of soft soap, then pass a heated flat-iron a few times across it, after which wash immediately, first with fullers' earth water, and then clean water.

Grease Spots, to Remove.-The application of Spirits of turpentine, and a little essence of lemon, wash with soap and water. Some wash with alum watcr, or white soap, potass, and ox-gall, or with sour butter-milk, mixed with strong ascetic acid.-Or apply i solution of magnesia.

Grease Spots, to Remove From Books.-Moisten the spot with a camel-hair pencil dipped in spirits of turpentine; when dry; moisten with spirits of wine.

Grease, to Remove From Cloth. -Soft soap and fullers' earth, $\frac{1}{2}$ lb. ; beat well together in a mortar, and form into cakes. The spot, first moistened with water, is rubbed with a cake, "and allowed to dry, when it is well rubbed with a dittle warm water, and rinsed, or rubbed off clean.

To Prevent Moths. - In the montr of April or May beat your fur garinents with a small cane or elastic stick; then wrap them up in linen, without pressing the fur too hard, and put betwixt the folds some camphor in small lumps; then put your furs in this state in boxes well closed. When the furs are wanted for use, then beat them well as before, and expose them for twentyfour hours to the air, which will take away the smell of the camphor. If the fur has long hair, as bear or fox, add to the camphor an equal quantity of black pepper in powder.

To Free Plants Fron Leaf-Lice.-M. Braun, if Vienna, gives the following as a cheap and easy mode of effecting it:-Mix loz. of flour of sulphur with 1 bushel of sawdust; scatter this over the plants infected with these insects, and they will soon be freed, though the second applicatiou may possibly be necessary.

Destruction of Rats. - The following reoipe for the deetruc. tion of rats has been communicated by Dr. Ure to the council of the English Agricultural Society, and is highly recommended as the best hnown means of getting rid of these most ubnoxious and de-

## DR. CEASE'S RECIPES.

structive vermin. It has been tried by several intelligent persons and found perfectly effectual. Melt hog's lard in a liottle planged in water, heated to about $150^{\circ}$ of Fahr. ; introduced into $\frac{1}{2}$ oz. of phosphorus for every pound of lard; then adil a pint of proof spirits, or whiskey ; cork the beftle firmly after its contents have been heated to $150^{\circ}$, taking it at the same time out of the whter, and agitate smartly until the phosphorus become uniformly diffued, forming a milky looking liquid. This liquid, being cooled, will afford a white compound of phosphorus and lard, from which the spirit spontaneously separates, and may be poured off to be used again, for none of it enters into the combination, but it merely serves. to comminute the phosphorus, and diffues it in very fine particles through the lard. This componind on being warmed very gently, may be poured out into a mixture of whent flour and ougar, incorporated therewith; and then flavored with oil of rbodium, or not, at pleasure. The flavor may be varied with oil of aniseed, etc. This dough being made into pellets, is to be laid into rat-holes. By its luminousness in the dark, it attracts their notice, and being agreeable to their palates and noses, it is readily eaten ; and proves certainly fatal.
Razor, to Sharpin. - The simpleat mothod of sharpening a razor is to put it for halfan hour in wafler to. Which has boen added one-twentieth of its weight of muriatio or sulphurin aold, and after a few hours, set it on a hone. The acid scto as a whetstone, by sorroding the whole earface uniformly, so that nothing further than a smooth polish is neceessary.
Razor, yo Smooth:- Pass the razor on the inside of your hand, first warming it before the fire. Or, use the strap of a soldier's knapsack, or calf leather, on which some fine, blacklead has been rubbed and consolidated to a slight surface.

Rizor, Strop, aslp Paste.- It may be made of rough, calf loather, two or three inches broad, or of the strap of a soldier's knapsaok. Upon it Eipread powdered oxalic. acid and candle. anuffs, with a little tallow. - Or spread upon its crocus martis and fine tallow.-Or, emery ground as fine as possible, mixed with spermaceti or fine tallow.-Or, glue, $\frac{1}{2}$ oz. ; molassew, $\ddagger \mathrm{oz}$; fteep the glue in water to soften it, and then boil both together for a few minutes, and crocus martis, or fine emery powder, amd then apread on the leather. When you use it apply first a drop or two of aweet oil.

SIGNS OF THE WEATHER-Dzw.--If the deiw lies plentifully on the grass after a fair day, it is a sign of another fair day. If not, aud there it no wind, rain must follow. A red evening portends fine weather; but if it spread too far upwards from the horizon in tbe evening, and eapecially in the morning, it fortelle wind or rain, or beth. When the thy, in reiny wíather, is tinged with zea green, the rnip will increase; if with deip blue, it will be showery.
